# 1. WELCOME TO THE TEN-TEC SSB NET GROUP

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-03-20 22:31:33 UTC
From: John
Topic: 1  Message: 1

I want to welcome every TEN-TEC owner to this new Group. You are free to ask any questions about any TEN-TEC product. Membership is also open to those who are interested in buying a TEN-TEC product. There are many people who are erudite when it comes to TEN-TEC radios and other products made by TEN-TEC and will be able to assist with any questions or concerns.

This Group will also be discussing the TEN-TEC Certificate Program,
which was started by Jim Wharton NO4A, Vice President TEN-TEC, INC.

As net control of both the TEN-TEC 40 meter and 20 meter SSB Nets, I want to welcome you to check into our nets each Sunday. The TEN-TEC 40 meter net starts at 19:00 UTC (Daylight Saving Time)on 7.260 plus or minus and the TEN-TEC 20 meter net follows at 20:00 UTC on 14.325 plus or minus.

Each time you check into one of the nets you will receive 1 credit for each net. So if you check into both nets on a Sunday, you will receive credit for 2 checkins. When you reach a total of 10 checkins, you will receive a beautiful certificate from TEN-TEC signed by Jim Wharton NO4A, Vice President TEN-TEC, Inc.

When you reach a total of 25 checkins, you will receive a Silver Certificate and when you reach 50 checkins, you will receive a Gold Certificate.

You can see these certificates on my QRZ page
http://www.qrz.com/db/k3ur

Thank you and I look forward from hearing from you here on this new Group and also on the TEN-TEC 40 meter and 20 meter SSB nets.

From: John
Topic: 4  Message: 4

Thanks to all those who have joined this new Group. I had to make this change in order to keep the TEN-TEC nets together. Now we are free to post anything about the TEN-TEC nets and the certificate program.

According to some people, the certificate program was not ham related and they showed their true colors on the other Groups. We know who they are and I hope that they are happy now that this new TEN-TEC Radio Net Group has been started.

Thanks to all of you who have joined this Group so quickly. We will have lots of good times here and also on the TEN-TEC nets.

## 9. On Board

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-03-21 10:21:54 UTC
From: ki4ps
Topic: 9  Message: 9

Hi John! First I would like to give you my support on doing the net.

Coming up on 53 years in ham radio, and from what I've been hearing over the years it's not the radio (ham or CB). It's the PEOPLE operating the equipment. It's a different world, and it seems radio is an easy way to agitate people, and hide behind a mic.

Now with the advent of the computer and internet you can agitate both ways.

For me CW will still be my main stay, and since I've been using TT radios (Orion II, Omni VII, Eagle, and Scout) ham radio has refreshed my ears to clean CW.

John, as for me the TT net you started was never about the certificate, just a chance to talk with other TT users and what they are using, etc. But the certificate is a nice addition.

Jerry, ki4ps

## 10. I'm also QRV here now...

Jerry, thank you for the fine post. It has been my pleasure to have known you for the past year on the TEN-TEC SSB nets. Your contribution has put a smile on the faces of many Eagle owners.

I want to invite you and the rest of this marvelous group to post some of your settings and tricks for the various TEN-TEC radios you have and have used in the past. Feel free to post them in the FILES section.

As I am looking at my clock right now, it is just about 24 hours since I started this new Group and it has grown to 71 members already. I appreciate each one of you and will count you as my family. God bless each of you and your families and let's have real radio fun on this Group.

Greetings all,

I made one connection on the net when it first started, on 20m with my Elecraft K2/10. It was a little rough going, for sure. Anyway, I've owned several Ten Tec's over the years - 509, 515, Scout, Argosy, C21, C22, but sold them all over time. However, I did just recently obtain a nice Omni VI opt 3 and hope to dive into the net again soon. I've not used it much but can tell I am going to love it. It will also give me time to put the K2 on the bench for a checkup and realignment.

John and the gang,

I have a Ten-Tec Eagle, “pre-production unit” - No Ten-Tec mic (didn’t come with one.)
I use a 50+ year old Sure 444 mic with the rig.
I key it externally with an MFJ-495 Keyer. This helps provide timing for keying an old amplifier.
The paddle is a Vibroplex “Iambic" which Scott personally built for me.

My Eagle has the built-in ATU, NB, and ALL filters.
I have currently installed the 1.8 kHz and 300 Hz filters – the other filters are stored for a rainy day.

I also have the Model 318 Amp Keyer (modified, having removed the relay to stop the annoying clicks), and the Model 712 Data Interface.

And last but not least, I also have a Model 238-B Matchbox.

Unfortunately I do not have any Orange Dots, except the one on the Blue Felt Dust Cover for the Eagle.

Hi John and fellow "Ten Tec'ers",
I've been a TT fan almost since they began, and am still a big fan.
Presently I use the Omni 6+, and I have two Omni 6 option 3 rigs, plus a digital Century 21 and a PM-3. I also have the TX-100 which uses a 6CL6 and 6LQ6 (final), the tube transmitter but the power transformer is gone in it so it is just "for show" for now. Anyone have a junker with a good transformer?
In the past, I've owned the 509, 515, Omni C, Corsair I and Corsair II, Omni 5, Omni 6, Century 22 and others. I have also owned 3 different TT amplifiers. I believe my favorite transceivers were the Corsair II and the Omni C, for overall performance.
Have not yet checked into one of the nets but hopefully I will have time one day soon.
73 to all and Happy Spring!

## 24. Ten Tec Radios

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-03-22 12:52:48 UTC
From: Ed Pflueger
Topic: 24  Message: 24

I bought my first Ten Tec radio in 1987 which was a new Omni V. Since then I have had a Paragon, Omni VI, Omni VI+, and Orion. My present line up is Orion II, Omni VII, and an Eagle. I also have had multiple 238 tuners, 238B, 253 (which I really miss)and now a 238C. Amplifier wise I have had a 425 Titan, Hercules II, and a Titan III.

Since 1987 I have been able to have worked 6BWAS, 9BDXCC, Honor Roll and with HK0NA last year #1 Honor Roll. Apparently the equipment works and am waiting for Ten Tec to come out with (not holding my breath)a solid state amplifier and an automatic antenna tuner to make a complete station.

At the present time my shack has the Orion II connected to a Centurion. Then the Eagle is connected to a AL-80B. Both rigs have keys connected because I do CW. The Orion II has the Kent in the front, and the Vibrokey to the rear. The Eagle has a Bencher connected. Both rigs have the 709 mic which seems to be a very good match. These are my main two radios. These radios also feed a Palstar AT1500CV. Maybe someday a 238B/C will be connected. I also owned a Omni VII for several years, but got a chance to purchase the Orion II, so the Omni VII left. I still miss the Omni VII, and wish it were still in the shack.

My aerials (antennas) consist of a OCF 80 thru 10. The other one is a Super Loop 80 thru 10.

My portable radio is the IC-7000 which is three years old, and a good work horse for band hopping. When I do portable work my antenna is the MP-1.

So, with 52 years of ham radio, and 24 years of Air Force travel I've played with many radios. But for the life of me I do not know why I did not get into TenTec. A hard head I guess, but as I get older I seems to get wiser.

PS: Forgot to mention the Scout. Owned one for about 15 years, and just sold it. A fun radio that has audio that just belches out of the speaker.

Jerry, ki4ps

John,

I currently have an Orion I and an Omni D, Series B. In the past, I owned a Triton II and a Jupiter. Before I moved to Florida, I lived in Granger, IN which is next to South Bend. Al Kahn lived in Cassopolis, MI and a group of us used to get together on Tuesdays for lunch. Some of Al’s stories were hilarious! Jack is also from the South Bend area.

73,

John

Proud owner of 2 Paragon 585 rigs and an Omni D/b ... The main Paragon has called the Tennessee Phone Net every Wednesday Night without fail for about 2 years now. Stop by and Check In sometime. With the help of a Heathkit SB-200 this is all I really need. The microphones are Ten Tec Model 705 and the Antenna is a 75 Meter Flat Top with 450 ohm feed and MFJ-989C Tuner. Great NVIS, Multiband performance. The Real Boat Anchors are my Ft-101EE, SB-101 and HW-101. There is an FT-897D Yaesu in the shack for VHF/UHF and 6 Meters. It is very rarely tuned below 6 Meters. When they get older and if God allows me to live long enough, I too will own an Orion, Eagle or Omni 7 some day.

Thank you for joining the new TEN-TEC RADIO NET GROUP. You are a part of a group of elite Amateur Radio Operators. Thank you for supporting me in my efforts to keep the TEN-TEC nets together.

In spite of the all the negative comments on the other reflectors, we are free now from those who did not like or accept the TEN-TEC Certificate Program.

There is strength in unity and all of you are to be commended for not retaliating against those who tried to shoot down the TEN-TEC nets.

Jim Wharton NO4A, Vice President TEN-TEC, Inc has seen all that has transpired in the past week and he has assured me that I and the TEN-TEC nets have his full backing and support.

OK, here goes: I'm running a late model Jupiter 538AT feeding a K4KIO hexagonal beam at 35' atop a Rohn 9H50 telescoping mast and spun around with a venerable Alliance HT 73-1 rotor. Power is provided by an Alinco DM-330MV switcher. In reserve, is an ancient Murch 3000w T circuit tuner awaiting re-erection of my 31' vertical so I can back on 40m.

Headset is a seriously cheapo unit but I'm working on an upgrade. Despite the shoddy quality, I receive good audio reports. Radio's a Ten Tec, so what else could be expected?

Also have an 800w solid state amp in the works for a bit later.

Bill AE7KB

Here is my station.

160 thru 6m I use a Omni 7, with a Model 708 Mic and a 777 Pro Headset and when i rag chew i set in a recliner and change the band/freq with a Model 302 encoder keypad.  Photo of the station is on QRZ at my callsign.

I do 2m and 432 SSB but not on a Ten Tec.  Wish they made a current rig for those bands. Hint Hint.

Rob K9AIM Indiana

current radio: Jupiter (2003 green/gray model with auto-tuner and CW personality; bough off eBay in Jan 2010)

prior to that: Omni C (bought off of Craig's list in late 2009)

prior to that: Argonaut V (one of the last ones made, bought used in early 2009)

prior to that: Scout (bought off of Craig's list in 2008)

QRT from 1978-2008

prior to that: used HW-16 (Novice in 1976) used Drake Tr-3 (General and Advanced 1977)

- - - -

would have loved to have kept all the Ten-Tecs, but could not afford to do so. The great thing was they retained their value between the time I got them and the time I sold them.

Hope to have an Eagle some day, although the Jupiter leaves very little to be desired ;-) I am constantly shocked by how many American hams choose Japanese rigs when these Ten-Tec gems are available.

This is a reminder that the TEN-TEC 40 meter SSB net starts at 19:00 UTC tomorrow (Sunday) on 7.260 LSB and the 20 meter SSB net follows at 20:00 UTC.

I am asking for several people to be on these frequencies prior to net times, in order to secure the frequency for our nets.

Thanks to all who have posted their TEN-TEC radio gear. It is amazing the amount of various TEN-TEC radios that are still being used today.

I see that at leaset 1 person has posted their shack in the PHOTOS section and I encourage more of you to do the same. Also, feel free to post any pertinent information in the FILES section, such as menu settings, mic settings, etc. as these will be of great benefit to other members of this elite group.

There will be a lot of certificate winners tomorrow!

Hello to the Group,
Most folks would clean up the operating desk before posting pictures. What you see is what you get if you walk into my Shack. Please notice that the Ugly SB-220 that I am rebuilding, is turned on and making that Pretty Orange Glow that goes so well with the Tennessee Orange Ball, on the front of All of my Ten Tec gear. New Caps in the Power Supply really made a difference. Now I am looking for an RF Sponge to soak up all of the RF Problems it causes. Although this is not a Ten Tec topic ..... does anyone have some spare 3-500's and would like to do some trading? If you do, Please, contact me off list.
73 to all and May God Bless de Wade/KJ4WS

Don☐t make it so hard, John.

Just ask everyone to vote.

Everyone gets one vote, regardless of how many transceivers they have.

Also, you must distinguish between

¨ ☐favorite☐ and

¨ ☐owned by most number of group members☐

because people who own a transceiver, may not own their favorite transceiver.

For instance, I own an Eagle and love it for what I do now, but my favorite radio is the Omni VII.

If I ever stop contesting and stop doing portable operations, then I will sell the Eagle and get an OM7.

My favorite Ten-Tec radio is whichever one I am using HiHI

Seriously though, it would have to be the Scout. I was QRT from 1978-2008 and wanted to get back on the air on the cheap. Someone at one of the ham websites offered me their Icom IC-730 for $300 so I bought it. What a non-user-friendly rig! The jumble of little buttons made my on the air experience ho-hum. Then I saw a Scout on Craig's list and read the reviews on eham.net Sold the Icom and fell in love with the Scout. What a fun little easy-to-use work-horse! Beautiful too!

My Jupiter has enough room inside for another radio and I like it just fine. The large face provides plenty of room for large, well spaced buttons, switches and knobs with large, easy to read labeling and not too many of them. Perfect for my fat fingers and trifocal eyeballs.

Loved the Corsair and Omni D but the Paragon is my favorite. It is also my first Digital Rig. I am not an Appliance Operator or at least don't think that I am. But, the ability to twist the Big Knob somewhere and KNOW that you are on frequency is the Big Plus in my choice. If not for that, my choice would be the Corsair. The Corsair can hear an Owl in Flight. See you thought I was going to say something about a Mouse didn't you. Even a Mouse can't hear an Owl in Flight...

Hi all,

My favorite radio is my Orion-II Because that's the only Ten-Tec radio I have (besides some Kenwood, Icom and Yaesu gear). I also have a 238-B tuner which is the best tuner I ever purchased. I use it to tune a double extended Zepp fed with ladder-line. It's a great combination.

Now it’s getting tricky and I have to answer with “that depends.” I forgot to include my R40/20 which is my favorite portable qrp rig. But since the weather is not yet warm and/or pleasant, my present favorite is the Omni 7. Although there are times when some indoor qrp with the Argonaut 5 is fun. Come to think of it, the scout was fun until it decided to change frequencies and irritate the other half of a qso. All that being said, I’m sure I didn’t answer the question. See you Sunday with an Omni 7. 73

Hello to the Group, like any other new thing or venture, there comes some growing pains. I was completely "green" as a Group Owner/Moderator and this was my first attempt at starting a new group 3 days ago.

I have been learning by trial and error and this is one reason why I have been posting so many messages here.

I have just successfully avtivated the ATTACHMENTS for this group and will send my Omni VII as the attachment. This is the same radio that I put on the header of the TEN-TEC RADIO NET group.

Please feel free to send any attachments if you wish, as this will always benefit the entire group. I want to thank those who have already uploaded your hamshack pictures in the PHOTO section and I encourage more of you to do so.

Please let me know how things are shaping up here. We have 86 new members already and all of you are a part of the elite group of Amateur Radio Operators and I am so happy to have you on the team.

Remember, there is no "I" in the word TEAM. It will be so much easier for me to run the nets tomorrow, knowing that we are working together as a team. God bless you and your families.

Date: 2013-03-24 01:53:13 UTC
From: nf4r42
Topic: 73  Message: 73

I am told that my corsair ll has low audio while on the air. Was using my 705 mic.,have also tried my heil mics,with same reports. Both of these mics work fine on my paragon. Corsair was purchased from a friend that had not used it for 3 or 4 years. sn. is 580 02129. I am no tech but have used schematics to troubleshoot and did some homebrewing. Problem is I only have a foggy idea of what I am doing. Traced mic input to audio processor board and found u2a,on pin 3 has 3.7v instead of .9 and pin 5 of u2b also has 3.7v instead of .9 and pin 6 has 4.1v instead of 1.0. On u1 pin 5 has 2v instead of 0. This is where I get lost and foggy. I have replaced the vfo with the n4yg board but can't see where it should cause my problem. I know the small electrolytic
caps go bad but not how to check them. This my first post so am sure I
did not give all information needed.
Thanks for any help or insight. You can reply to nf4r@...

# 79. TEN-TEC 40 METER & 20 METER SSB NETS TODAY

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-03-24 13:40:58 UTC
From: John Occhipinti
Topic: 79  Message: 79

This is a reminder that the TEN-TEC 40 meter SSB net starts at 19:00 UTC today (Sunday) on 7.260 LSB and the 20 meter SSB net follows at 20:00 UTC on 14.325 USB.

I am asking for several people to be on these frequencies prior to net times, in order to secure the frequency for our nets and also for people to help with any relays.

Thanks to all who have posted their TEN-TEC radio gear. It is amazing the amount of various TEN-TEC radios that are still being used today.

I see that several people have already posted picures of their shack in the PHOTOS section and I encourage more of you to do the same. Also, feel free to post any pertinent information in the FILES section, such as menu settings, mic settings, etc. as these will be of great benefit to other members of this elite group.

I have also activated the ATTACHMENTS option and you can now send attachments to the group. I have sent attachments of my Omni VII and of the TEN-TEC Certificate.

There will be a lot of certificate winners today!

Well, at least George's collection is orderly and his radios appear to be clean and in working condition.

Last year at Pacificon, Pat, WA6MHZ, gave a presentation that was supposed to be about restoring vintage radios.
Instead, we were treated to photos of his collections, both at home and at his office.
Around the house, radios are stacked up the walls in every room.

I think his YouTube video tells the story:

http://www.youtube.com/watch?v=mh200fQRDCM

And this is a collection of photos from both the west wing (office) and east wing (home).
If this doesn't reassure your XYL that you don't have too many radios, nothing will:

If I counted correctly, between 1:30 PM and 4:30 PM Central Time today. We picked up 26 new members here at the group. This is also roughly the time that the 40 and 20 Meter Nets were on the air. Great going folks. Welcome to All from Wade/KJ4WS .....

Jim - KG0PP

Since I am a dedicated QRP operator, I would say the TT-539 Argonaut VI, because of the great receiver. I like the TT-516 Argonaut V because it is so easy to use.

For QRO, probably the Corsair II, although I like my Orion more and more each time I use it, and climb further up the learning curve.

The Paragon is very good as is the Omni 6+.

My Paragon is behaving badly, so I am happyy to see we have someone that can help me trouble shoot it.

Nice to hear everyone on the net Sunday the 24th

Jim - KG0PP ( peanut power )

# 91. TEN-TEC 40 METER & 20 METER NET RESULTS

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-03-25 02:04:32 UTC
From: John Occhipinti
Topic: 91  Message: 91

It has been an interesting and exciting week for the TEN-TEC net. As most of you know, the TEN-TEC nets and the TEN-TEC Certificate Program were not accepted by some people on the other TEN-TEC Reflector Groups.

In the spirit of restraint and for the good of the TEN-TEC nets and for TEN-TEC, Inc, we had to make a move and start a new TEN-TEC-RADIO-NET Group and this started on Wednesday March 20th, 2013 (4 days ago).

In just 4 days the membership in this new Group has grown to 113 and I want to thank each of you for your continued support.

The TEN-TEC 40 meter SSB net took place today at 19:00 UTC on 7.261 LSB and we had 61 people check in. The TEN-TEC 20 meter SSB net followed at 20:00 UTC on 14.325 USB and we had 92 people check in.

One of the checkins on the 20 meter net was PA0NVD, Nico from Malaga, Spain. His home is in the Netherlands and he was operating a Corsair 2. He was not aware of any TEN-TEC net and came across us by tuning across the 20 meter band. I also had Lloyd N2KPC, the Northeast Relay Station in NJ talk to Nico.

There were 2 more Certificate winners this week:

1.K0BGP Mike in IA
2.K1FPV Bill in MA

Congratulations to these 2 men. There are 24 more people who will qualify for their certificates next week, with 13 people only needing 1 more checkin and 11 people needing 2 more checkins.

Jim Wharton, buy more stamps!

I want to thank Lloyd N2KPC for taking the responsibility as the Northeast Relay Station for the TEN-TEC nets and I also want to thank John KC2QMA for streaming the live audio during the nets. I feel very fortunate to have the support of these 2 men and also to have a group of elite Amateur Radio Operators as part of this group.

I will post the new Certificate Data Base on the TEN-TEC-RADIO-NET Group in a few minutes. I am leaving last weeks Data Base there also for everyone to compare their checkins from last week. If you see any mistakes, please inform me by personal email and I will correct them.

Have a safe, wonderful and blessed week.

Topic: 59  Message: 94

I have owned Ten Tecs since the 70's and my favorite is the Paragon I still use every day. Mine has every option except the FM board and I have added audio DSP inside the speaker housing and even wrote a control program so I can program memories and alpha tags easily or control most functions from the computer. I love the looks of it, probably the best looking radio ever, and the fact that it is probably the most advanced radio that I can still work on and repair. No surface mount components here! Also, it has a great memory tag system so I can recall what nets meet where. It performs well, although I have a bit of the Ten Tec receiver syndrome in that I can hear a lot more folks than can hear me, unless I run a linear. The sound is pleasant and not at all tiring to listen too. I keep looking at newer rigs and playing with the Orion and Omni VII at the Ten Tec hamfests, but I keep coming back to the faithful Paragon.

# 96. Favorite Ten-Tec Radio

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-03-25 14:08:46 UTC
From: K4AXF - Jim
Topic: 96  Message: 96

I have had nearly one hundred rigs over the 50 years I've been on the air. My favorite?

Hard to say: My Corsair is the coolest rig ever, great-looking and super-fun. On the other hand my Paragon is like a fine lab instrument - works great on both CW and SSB and is a super-SWL receiver. I've got all the crystal filters and upgrades in both rigs; so they are interchangeable.

I guess I'd have to say my favorite is the Corsair . . . . no, the Paragon. . . . just don't know.

73 to all,

Jim K4AXF

I to have a hard time hearing John even with my beam and other antennas here.  He is between the bounces of the signals distance wise.  From here he will always be hard unless the band is going short. Maybe heat of summer) lol.

Bill, thank you for your positive comments here. You sound like you may have been in the Navy. If you have, go to my QRZ page and look for the SoundCloud link and you can hear the song I wrote and recorded for a ham radio friend of mine who served on the USS Douglas H. Fox.

The name of the song is, The USS Douglas H. Fox.

Congratulations on being a "plank owner". There is an old saying that goes, "some are plank owners, while some have become plank walkers"!

We on this Group have chosen to be "plank owners".

John, K3UR

I to have a hard time hearing John even with my beam and other antennas here. He is between the bounces of the signals distance wise. From here he will always be hard unless the band is going short. Maybe heat of summer) lol.

Jim, I'm located just west of Indy, and have a heck of a time catching John

on 20 meters, also. I guess we're just a bit too close.

73,

Ken, KJ9B

Well I have great luck with the 40 meter net. Able to hear almost everyone

with great signals. Wish it was the same for the 20 meter net. I can hardly

hear anyone. I'm located in Indiana and have decent antenna's. Gotta work

harder I guess and listen up!!!

Same here in Kokomo, no 20meters from John. Sometimes 40 is dicey as well.

Hi John. Yes, I was in the Navy for a while during the last century. I was a heavy equipment operator in the Seabees. There's the blue water navy, the brown water navy and the no water navy. Never set foot on a ship. Everything I know about the seagoing navy I learned from being a civilian government worker at Mare Island Naval Shipyard in California helping to overhaul submarines.

Off topic? In my view, if a number of us were sitting around my kitchen table, having coffee or drinks and talking radio, would not other topics arise from time to time? I have no problem should we digress from time to time.

I to have a hard time hearing John even with my beam and other antennas here. He is between
the bounces of the signals distance wise. From here he will always be hard unless the band
is going short. Maybe heat of summer) lol.

John, on 20 meters when you turn your Quad I hear no difference in your signal strength. Most of the time the 2 and 3 stations relay for me so I still get in. I'm just over 300 air miles from you and I hear you about the same on my TH11 and Hy-Tower no matter which way you are pointed.

Hi John

The problem with 20 meters could best be done if you have an inverted V ant with the bottom of the leg 8 to 12 feet off the ground.  I say this because N9OI and Myself host a field day every year and have found that an inverted V is the best ant to cover the Midwest  ( the points where the the sig bounces and comes down) If you have the ability to put this ant up you will cover more of the Midwest.  Your quad is more of a DX ant then Midwest NVIS  Others will more then likely agree with me.  Just trying to help.

Jim, I'm
located just west of Indy, and have a heck of a time catching
John

on 20 meters, also. I guess we're just a bit too
close.

73,

Ken, KJ9B

[ten_tec_radio_net] 20 Meter Net

Well I have great luck with
the 40 meter net. Able to hear almost everyone

with great
signals. Wish it was the same for the 20 meter net. I can
hardly

hear anyone. I'm located in Indiana and have decent
antenna's. Gotta work

harder I guess and listen
up!!!

# 120. INFORMAL TEST SESSION WEDNESDAY ON 14.325

Date: 2013-03-27 02:46:08 UTC
From: John Occhipinti
Topic: 120  Message: 120

I would like to get together with as many as possible for a short test session at 20:00 UTC (4PM Daylight Saving Time) tomorrow (Wednesday) on 14.325 to test directions, antennas and propagation.

Please post here if you can make it and I will call for any of the TEN-TEC SSB net members that may be on 14.325. Thank you.

John, Unlike the net days of late, I should be available for the test session Wednesday on 20m. I usually have a good path open to and from your general bearing centered on Tucson but band conditions have been seriously lacking for over a week or so.

Well if we are suggesting 20m antennas for John, I suggest a 2-wavelength long Lazy-Loop.

It will give you an Omni-directional pattern with a huge range of radiation angle; perfect for working into all directions and all kinds of distances.

This is probably not an option, but if it is, then elevate the 4 corners about 8 to 12 meters high and feed it in any corner through a 4:1 Balun.

It actually has some directivity off of each corner, but it’s pretty broad.

If you don’t have room for that, then make the loop half size.

It will radiate more or less equal in all directions.

A lot more of the radiation will go straight up, but it still radiates plenty of signal at lower angles of radiation.

Hi John

The problem with 20 meters could best be done if you have an inverted V ant with the bottom of the leg 8 to 12 feet off the ground. I say this because N9OI and Myself host a field day every year and have found that an inverted V is the best ant to cover the Midwest ( the points where the the sig bounces and comes down) If you have the ability to put this ant up you will cover more of the Midwest. Your quad is more of a DX ant then Midwest NVIS Others will more then likely agree with me. Just trying to help.

Doug, Jim, Steve, Rob, Ken, and anyone else in the Indiana Area. I hear what you guys are saying and I am very concerned about this.

Is there anyone who can copy me and also these fine gentlemen about the same on 20 meters?

I will switch from my Quad to my Full Wave Loop and also to my Vertical and see if this helps from Atlanta to Indiana.

Any other concerns?.....after all, we are family here!

I am northwest of Indy and also have zero luck checking into the 20m net due to proximity to John.

Maybe a 6 or 7 station acting as relay for net control would work?

I to have a hard time hearing John even with my beam and other antennas here. He is between
the bounces of the signals distance wise. From here he will always be hard unless the band
is going short. Maybe heat of summer) lol.

Hey John,

I am not sure a different antenna is the answer, probably we are just too close for 20 meters under normal condx.

A 6 or 7 area station acting as relay for net control might be more successful

If NVIS Antenna Theory works as well on 20 Meters as it does on 75/80 Meters. You will most likely see a great difference by switching to a Lower Inverted Vee .... But, here is a question that I am curious about. What is the height of your current antenna? John, I can hear you for the 20 Meter Net and most times you are down in the background noise level. I will be listening at 4:00 PM. I do know that with the height of my 75 meter dipole with ladder line feed ( multiband.) That my poor old antenna is quite a Cloud Warmer for sure. It is in Flat Top configuration at about 30 feet. I am in Mount Pleasant, TN. and that is about 230 Air Miles from John/K3UR .... So, we will be listening here and 73 to all.... Wade/KJ4WS

John,

Will try to be on freq. since reception on 40 in W. MI is negligible (no surprise) but normally I should be able to copy you on 20. Lately you've dropped off the radar, so to speak. Will be using a half wave 80M loop up about 35-40 feet.

Hi Wade, Bill, Rick, Robert, Dexter and Tony, thank you for responding to our get together this afternoon at 20:00 UTC on 14.325.

Wade, this is what I use for the nets:
40 meter net.....Full Wave Loop at 50 feet in a rectangular configuration.
20 meter net.....2 Element Quad on tower at 50 feet (I turn it in the direction where I call).

Today I will be using my 41 foot Vertical and will also switch to my Full Wave Loop. We may have better results into the North with my Vertical. I will be running the same 1000 watts on each antenna.

Tonight will be1 week that we started the new TEN_TEC_RADIO_NET Group and we have 121 members. I was checking all of the 34 Certificate winners and only 16 of them have joined our new Group. So that makes 18 Certificate winners who have not joined our new Group.

Thanks to all for participating in the test session today.

You guys are pretty well right. Johns antenna is more for low angle DX, not for working shorter range cont. US. An inverted V on 20m is probably the simplest choice. Keep it closer to the ground as Steve has suggested. Apex up about 25-30ft should work ok. Omni directional to boot.

I could not work John Sunday on my mosley beam, but finally did on my OCF dipole. Most of us don't think of working 20m NVIS. I'm down in southern Indiana, a bit closer to John, but not much closer than you other guys. Had a very hard time hearing him. Did hear the relay. 40m....usually is a snap, but for some reason Sunday, could not hear John, so did'nt even try to check in. PS,...a vertical would probably be worse than his quad on 20m. He needs a high angle to work closer in.

Having good relay stations is a must for the net to continue to be successful, with or without an antenna change at Johns location.

I would like to get together with as many as
possible for a short test session at 20:00 UTC (4PM Daylight Saving Time)
tomorrow (Wednesday) on 14.325 to test directions, antennas and
propagation.

Please post here if you can make it and I will
call for any of the TEN-TEC SSB net members that may be on 14.325. Thank
you.

Meter Net

Hi John

The problem with 20 meters could best be
done if you have an inverted V ant with the bottom of the
leg 8 to 12 feet off the ground. I say this because N9OI and
Myself host a field day every year and have found that an inverted V is
the best ant to cover the Midwest ( the points where the the
sig bounces and comes down) If you have the
ability to put this ant up you will cover more of the Midwest.
Your quad is more of a DX ant then Midwest NVIS Others will more
then likely agree with me. Just trying to help.

Doug, Jim, Steve, Rob, Ken, and anyone else in the Indiana Area. I
hear what you guys are saying and I am very concerned about this.

Is there anyone who can copy me and also these fine gentlemen
about the same on 20 meters?

I will switch from my Quad to my
Full Wave Loop and also to my Vertical and see if this helps from
Atlanta to Indiana.

Any other concerns?.....after all, we are
family here!

Well if we are suggesting 20m antennas for John, I suggest a 2-wavelength long Lazy-Loop.

It will give you an Omni-directional pattern with a huge range of radiation angle; perfect for working into all directions and all kinds of distances.

This is probably not an option, but if it is, then elevate the 4 corners about 8 to 12 meters high and feed it in any corner through a 4:1 Balun.

It actually has some directivity off of each corner, but it’s pretty broad.

If you don’t have room for that, then make the loop half size.

It will radiate more or less equal in all directions.

A lot more of the radiation will go straight up, but it still radiates plenty of signal at lower angles of radiation.

Got though finally to John, using my beam on this end, from Indiana. Just heard Stan in Conn. Very strong here, 59
John is coming up slightly here, but still very weak copy.

# 143. Re: [ten_tec_radio_net] INFORMAL TEST SESSION TODAY (WEDNESDAY) ON 14.325

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-03-27 20:20:33 UTC
From: Dexter Alexander
Topic: 127  Message: 143

W4DLA (Somerset, Kentucky) monitored Ten Tec Radio Net on 14.325 from 19:50 to 20:15 UTC with these results:

NCS K3UR was R1 S1 most of the time. Occasionally R2.
I copied the following calls:
K3GDX 57
KG0PP 43
AE7KB 54
W3GQJ 57

W4DLA called K3UR three times between 20:00 and 20:15 with no response.
Called for a relay once with no response.

Station setup today:

- Omni VII
- Centurion at 1,000 watts
- Cushcraft R8 vertical.

73,

Dexter, W4DLA

I came into the end right at the very end hearing John thanking everyone, When he finished
I tried to call John signing my last two letters of me call sign.
But no joy.

For John's information, you were, for those few minutes, 79 into MA.
I also heard (I think) since I got on so late, a 7 call station coming in very well.
My antenna is a G5RV at 30'.

# 145. REPORT FOR THE 14.325 TEST SESSION WEDNESDAY MARCH 27, 2013

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-03-28 00:35:45 UTC
From: John Occhipinti
Topic: 145  Message: 145

The 14.325 Test Session went fairly well today. I called for the Test Session at 20:00 UTC today (Wednesday) and we had 14 people check in, including Stan Brock WD0BGS, Sales Manager, TEN-TEC Inc. and Jim Wharton NO4A, Vice President TEN-TEC, Inc. The were transmitting from the KK4TT TEN-TEC headquarters in Sevierville, TN with Stan at the mic.

I do not know of another radio company that is as "hands on" as TEN-TEC. They are really concerned about their customers and also support the TEN-TEC nets and our new reflector group, ten_tec_radio_net.

I want to thank all these fine gentlemen for showing up to assist me with several of my antennas today and they will be rewarded for their efforts with 1 checkin cedit to add to their totals. They are;

1.K9QED, Phil in IL
2.K3GDX, Frank in NJ
3.VE3DWI, Tony in CN
4.AE7KB, Bill in AZ.
5.KG0PP, Jim in CO
6.AF5IG, Herb in TX
7.K8MAZ, Mark in MI
8.W9CMD, Dave in IN
9.W8DMM, Dave in OH
10.KF4AM Bob in SC
11.KB1YZZ, Stan in CT
12.N6MCM, Mel in CA
13.WD0BGS, Stan in TN (at KK4TT station)
15 NO4A, Jim in TN (at KK4TT station)

Did you notice that everyone except Stan WD0BGS and Jim NO4A were in different states. I was able to copy everyone except the 2 stations that border Georgia (my home).

Cheer up because next Wednesday at 19:00 UTC I will be having another Test Session for 40 meters and it will be on our net frequency of 7.260. Everyone that checks in will receive 1 checkin credit to add to your totals.

Possibly Stan and Jim will checkin from the TEN-TEC headquarters again and this time I should get a 40 over signal from them!

Happy Easter and a Blessed Passover to all. I will talk to you on Sunday.

# 156. WHY I LOVE MY OMNI VII

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-03-29 23:45:25 UTC
From: John Occhipinti
Topic: 156  Message: 156

I am asking for each member of this TEN_TEC_RADIO_NET Group to post here and give your reasons why you love your Omni VII. There are 86 reviews on EHam and the Omni VII has received a rating of 4.9 out of a possible 5.

Our friend N4PY, Carl Moreschi was the first person to post a review on EHam of the Omni VII on March 4, 2007. So we know that the Omni VII has been out for at least 6 years.

I purchased my Omni VII in March of 2012 and it became my main radio, replacing the Yaesu FTdx5000MP that I had. I posted my review on EHam after 3 weeks of testing and comparing it with my other 2 HF radios.

The Omni VII is the radio that I have used to conduct the TEN-TEC 40 meter and 20 meter nets since April 2012. My review on EHam has the heading, "STUPENDOUS" and this inspired me to write this little poem entitled;

"IF YOU WANT TO BE IN RADIO HEAVEN"

If you want to be in radio heaven, you should buy the TEN-TEC Omni VII,
do not be fooled by its smaller size, you will be in for a big surprise;
it can transmit all the way to 4K, no matter what the skeptics have to say,
it rolls off at a smooth 70Hz, maintaining cleaness within the frequency skirts;
so if you want to be in radio heaven, you should buy the TEN-TEC Omni VII,
the menus are all so easy to use, with the Omni VII you cannot lose;
noise reduction and also running split, makes the Omni VII a real big hit,
so if you want to be in radio heaven, you've got to get the TEN-TEC Omni VII.

Now it's your turn to tell us why you love your Omni VII. Thank you all for your input.

Topic: 156  Message: 157

Good evening John and the group,

There are many reasons I love my Omni VII. The quiet receiver, the powerful tool box of QRM fighting functions, the 500Hz and 300Hz Colins filters being usable not just in CW, but also in digital modes as well. Combining the narrow filters, variable width/frequency of the manual notch filtering gives you nearly single signal reception on crowded digital frequencies. Something I find invaluable when trying to dig a weak one out of the digital soup.

Its rugged, well designed (I'm an engineer, by trade, and the little engineering touches make a difference to me), well implemented, and the support that I get from the factory is second to none.

Then there are the ergonomic factors. Few of us admit it. We get caught up in numbers, figures, and chasing that mythical perfect rig with idyllic performance specs, but the operator has to love operating the rig. I love how it looks. I love how the functions are laid out. I love the ease of operating the Omni VII.

I could go on and on. Most has already been said. For me, the Omni VII is the prefect radio, and as such, it sits in a place of honor as my main rig and the center point of my shack. It does everything I need to do well. It exceeds my expectations in every way. I have yet to find a situation where it failed me.

Thanks and 73,
Jeramy W5XTL

# 158. Why I Love my Paragon!

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-03-30 06:31:28 UTC
From: kj4ws
Topic: 158  Message: 158

I don't have a large budget for Ham Radio. Thanks to luck and my ability to repair radio's. I now own two Very Nice Paragon's In the past the radio's I have owned were older Analog stuff, like Heathkit, Drake, Swan and a couple of Yaesu's. None of them Digital Radio's, just a pretty good collection of Boat Anchors. The day I got my Paragon was a day full of amazement! What! You can turn a radio on and just start talking! Wow! No 30 minute Warm Up! Not even the Drake Twins, T-4c and R-4c would do that. After selecting the 1.8 KHz. filter and playing with the Notch and PBT, all I felt was Love for this radio. I don't have 2000 menu's which would only confuse a simple minded person like myself. I hear Paragons, Corsairs, and then the New Radio's. It is very hard to hear any difference between a Paragon and an Orion during the Ten Tec Net,if there is any difference at all. Thanks to a divorce, the Drake rig is gone forever. Sure do miss it. But, even if the Drake gear were still sitting on my shelf, the Paragon would be my main rig. Ten Tec's newer rigs give me a good reason for looking forward to getting older. If the Good Lord lets me live long enough, there is an Orion or Omni VII in my future maybe 15 to 20 years down the road.

The Paragon is an absolutely great rig! I loved mine, and its still a favorite of mine. Most of my gear has come through trades, and deals after I purchase something that is forgotten and broken, and breath new life into it. I too have been through a divorce and a layoff so I've had to let go of lost of my ham gear accumulated over the past 20 years or so. Sadly, the Paragon was one that had to go. You can be sure that I drove to personally deliver it to her new owner and make sure she was going to a good home :)

Enjoy that rig and know that it's a great one!

# 160. RE: [ten_tec_radio_net] WHY I LOVE MY OMNI VII

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-03-30 08:00:24 UTC
From: Rick - DJ0IP / NJ0IP
Topic: 156  Message: 160

I also reviewed the OM7 in March of 2007, but my review was a bit long.

It has been posted since March 3rd, 2007 on the Bavarian Contest Club Web Site.

See:
http://www.bavarian-contest-club.de/reviews/First-day-with-OMNI-VII-on-the-air;art32,559

In addition I also posted a test comparing the OM7 to several other common radios a few weeks later.

See:
http://www.bavarian-contest-club.de/reviews/Transceiver-intermod-shootout-on-40M-in-europe-;art32,565

My conclusion was, "we did not expect the OM7 to fair as well as it did".

That was because of the use of upward conversion.

Ten-Tec taught us that this technology can also be used to produce an outstanding radio "if" you do your homework.

I don't own an Omni VII, and never have.

I tested a pre-production unit.

BUT the Omni VII is my favorite radio on the planet for non contest use and something like 5th place on my favorites list for team contesting.

I liked it for its performance and its no-nonsense menus.

I also found its size to be ideal; smaller than the OM6, a lot smaller than the Orion, but still large enough to be easily used by OPs like me with bad eyesight and clumsy fingers.

I liked it for its Ten-Tec typical QSK.

And most of all, I liked it because I like all of the people who work for Ten-Tec.

And of course also because I liked being a part of the Ten-Tec group.

Subject: [ten_tec_radio_net] WHY I LOVE MY OMNI VII

I am asking for each member of this TEN_TEC_RADIO_NET Group to post here and give your reasons why you love your Omni VII. There are 86 reviews on EHam and the Omni VII has received a rating of 4.9 out of a possible 5.

Our friend N4PY, Carl Moreschi was the first person to post a review on EHam of the Omni VII on March 4, 2007. So we know that the Omni VII has been out for at least 6 years.

I purchased my Omni VII in March of 2012 and it became my main radio, replacing the Yaesu FTdx5000MP that I had. I posted my review on EHam after 3 weeks of testing and comparing it with my other 2 HF radios.

The Omni VII is the radio that I have used to conduct the TEN-TEC 40 meter and 20 meter

nets since April 2012. My review on EHam has the heading, "STUPENDOUS" and this inspired me to write this little poem entitled;

"IF YOU WANT TO BE IN RADIO HEAVEN"

If you want to be in radio heaven, you should buy the TEN-TEC Omni VII,

do not be fooled by its smaller size, you will be in for a big surprise;

it can transmit all the way to 4K, no matter what the skeptics have to say,

it rolls off at a smooth 70Hz, maintaining cleaness within the frequency skirts;

so if you want to be in radio heaven, you should buy the TEN-TEC Omni VII,

the menus are all so easy to use, with the Omni VII you cannot lose;

noise reduction and also running split, makes the Omni VII a real big hit,

so if you want to be in radio heaven, you've got to get the TEN-TEC Omni VII.

Now it's your turn to tell us why you love your Omni VII. Thank you all for your input.

Thanks to those who have already posted your feelings on why you love your Omni VII. Subaru blows their own horn, why shouldn't we?

The TEN-TEC 40 meter SSB net will start at 19:00 UTC (3PM Daylight Saving Time)tomorrow (Sunday) on or about 7.260 and the 20 meter net will follow at 20:00 UTC on or about 14.325.

I am requesting that several of our net members to be on these frequencies prior to net times in order to secure these for the nets.

SPECIAL ANNOUNCEMENT: Due to the success of the 14.325 Test Session this past Wednesday, we will have another Test Session this Wednesday on 7.260 at 19:00 UTC (3PM EDST). Everyone that checks into this 40 meter Test Session will get credit for 1 checkin toward your certificate total.

We are using these Test sessions to check various antennas and to exchange any other pertinent one on one information. Thank you.

# 165. TEN-TEC 40 METER & 20 METER SSB NETS TODAY (SUNDAY)

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-03-31 14:29:56 UTC
From: John Occhipinti
Topic: 165  Message: 165

The TEN-TEC 40 meter SSB net will start at 19:00 UTC (3PM Daylight Saving Time) today on or about 7.260 and the 20 meter SSB net will follow at 20:00 UTC on or about 14.325.

I am requesting that several of our net members to be on these frequencies prior to net times in order to secure these frequencies for the nets.

SPECIAL ANNOUNCEMENT: Due to the success of the 14.325 Test Session this past Wednesday, we will have another Test Session this Wednesday April 3rd on 7.260 at 19:00 UTC (3PM EDST). Everyone that checks into this 40 meter Test Session will get credit for 1 checkin toward your certificate total. Just a reminder that everyone who checked into the 14.325 Test session this past Wednesday has received credit for 1 checkin toward their certificate total.

We are using these Test Sessions to check various antennas and to exchange any other pertinent information one on one.

A Blessed Passover and a Happy Easter to all who celebrate this special time of year. The message of forgiveness, hope and new life should inspire us all to keep on keeping on. Thank you and I will talk to you on the nets today.

It is close to Noon Central Time here in Mount Pleasant, Tennessee. Looking for Check-in's 9 and 10 today. That Certificate with the Big Orange Ball between the T's is sure going to look good here in the Shack. With the help of local Hams the Station should be at Near Legal Limit today. After winding a custom Triple Core 1:1 Balun and some antenna work there is no detected RF in the Shack. My Honey Do for the day was to help the Easter Bunny hide Eggs. I can not wait for the invasion just after Church. We hope that all have a Wonderful and Blessed Easter and 73 to All.....

Good afternoon Wade and Happy Easter to you also. Yes you can reach your total of 10 with checkins on both nets today. I checked the Data Base and there are 12 people who need just 1 more checkin today and 13 other people who need 2 more checkins to reach their total of 10.

Jim Wharton, NO4A Vice President TEN-TEC Inc. has prepared for this and is ready to mail out a whole lot of new cerificates.

I will be on 7.261 around 2 PM, 18:00 UTC to start calling for stations. The MidCars is on their regular frequency of 7.258 and I do not want to interfere with their net.

# 171. TEN-TEC 40 METER & 20 METER NET RESULTS + CERTIFICATE WINNERS

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-03-31 23:38:26 UTC
From: John Occhipinti
Topic: 171  Message: 171

I started the TEN-TEC 40 meter SSB net early today at 18:00 UTC on 7.261 and we had 63 people check in. The TEN-TEC 20 meter SSB net followed at 20:00 UTC on 14.325 and we had 38 people checkin. We had to compete with the contest on 20 meters, as they were wall-to-wall splattering all over the 20 meter band.

We had 11 new certificate winners today and as you can see, they are all from different states and Canada. Congratulations to the following;

1.W4DLA Dexter in KY
2.KI4PS Jerry in VA
3.N4EWZ David in AL
4.WN3N Nevin in MD
5.WA2WLS Alan in NY
6.AC5RK Michael in MI
7.WG0G Paul in WI
8.KJ4WS Wade in TN
9.K7TXO Gene in ID
10.N2OTG Bob in NY
11.VA7ZR Tony in CN

Due to the day being Easter Sunday and coupled with the 20 meter contest, many were not able to check in today.

There are 10 people who need just 1 more checkin and 8 other people who need just 2 more checkins to qualify for their Certificate from TEN-TEC.

Prior to today's net, I checked the 34 previous certificate winners and only 17 of them have joined the TEN-TEC-RADIO-NET Group. That means that 17 other certificate winners have not joined our new TEN-TEC-RADIO-NET Group.

Some have not checked back into our nets since we started the new TEN-TEC RADIO-NET Group. On the brighter side, we continue to have new people check into the nets each week and the total of different people who have checked into our nets since the certificate program started on January 20th of this year is 458 different people.

Remember, we will be having a 40 meter Test Session this Wednesday April 3rd at 19:00 UTC on 7.260 and everyone that checks in will receive credit for 1 checkin toward their total.

I want to thank Lloyd N2KPC. who is the main relay station for the nets, for assisting me today. I also want to thank Paul WG0G for assisting me on the 20 meter net today. A great big thanks to all who continue to support the TEN-TEC nets.

I will post the new Data Base in the FILES section. Have a safe and blessed week.

There will be a 40 METER TEST SESSION tomorrow (Wednesday) at 19:00 UTC (3 PM Eastern Daylight Saving Time) on 7.260. We had a similar net meeting last Wednesday on 14.325.

We will take this opportunity to test various antennas and to have an informal one on one exchange of questions and information.

Everyone that checks into the net will receive credit for 1 check-in toward their certificate total. Thank you.

There will be a special Test Session today, Wednesday at 19:00 UTC (3PM EDST) on 7.260. This is an opportunity to have an informal get together to test antennas, mics, to ask questions or to just have a good round table discussion about TEN-TEC products and anything else related to Amateur Radio.

I also will be ready to digitally record and play back anyone's transmissions, if they want to hear how their radio sounds over the airwaves.

Last Wednesday's Test Session on 14.325 was a first time success, so we wanted to give 40 meters the same opportunity. Everyone that checks into this special Test Session today will receive credit for 1 checkin toward their certificate total. Thank you.

I would like to have your input on the RF Gain settings when using the Omni VII. I have heard several different views on this in the past, but would like to hear from those who are a part of the elite TEN-TEC-RADIO-NET Group.

I personally have found that if I set my Omni VII RF Gain to 50% when I am recording someone else's transmissions and playing them back, that a lot of the hash and band noise is reduced, which makes for a more accurate recording and playback.

Also, what do you have your SP set to for normal round table discussions, compared to calling for DX? I have mine set at 25% when running the nets.

Thank you for your input on these.

The 40 meter Test Session took place today at 19:00 UTC on 7.260 and we had 33 people check in. Stan Brock, WD0BGS, TEN-TEC Sales Manager was on the net from the KK4TT TEN-TEC Office and answered several questions.

We also had the opportunity to record several stations and play their transmissions back over the air. There was several one-on-one interactions between stations and we also had a remote station check in.

People had the opportunity to check their mic and eq settings and it was just a great time of TEN-TEC fun. Thanks to all who checked in and everyone will receive 1 checkin credit toward their certificate totals.

# 180. NEW CERTIFICATE WINNERS TODAY 4-3-2013

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-04-03 22:53:42 UTC
From: John Occhipinti
Topic: 180 Message: 180

Today's TEN-TEC 40 meter SSB Test Session on 7.260 produced 2 more new TEN-TEC Cerificate winners. Congratulations to;

1.N8OP Bill in WV
2.K8MAZ Mark in MI

I will post the new updated Certificate Data Base in the FILES section in a few minutes.

Although 17 previous Certificate winners have not joined our TEN-TEC-RADIO-NET Group, we continue to pick up new checkins each week and we had 6 first time checkins today.

We started the new TEN-TEC-RADIO-NET Group on March 20th in order to keep the TEN-TEC nets alive and avoid the divisive comments on several of the other TEN-TEC Groups about the TEN-TEC nets.

The TEN-TEC Certificate Program, which was started by Jim Wharton, NO4A, Vice President, TEN-TEC, INC. also came under fire and many egregious comments continued, so I did what was best for TEN-TEC and the TEN-TEC nets and started our own Group called the TEN-TEC-RADIO-NET Group.

It appears some of our former supporters have not agreed with this and have not joined our new TEN-TEC-RADIO-NET Group and several of them have not checked back into our nets since March 20th. I feel bad about this, but we have done all we can to keep the peace and to continue the high standards of both the TEN-TEC Company and the Amateur Radio Community.

On the brighter side, since our new Group started on March 20th, here are the number of new checkins after March 20th.

March 24th. 40 meter and 20 meter nets, 37 new checkins.
March 27th. 20 meter Test Session net, 4 new checkins.
March 31st. 40 meter and 20 meter nets, 15 new checkins.
April 3rd. Today's 40 meter Test Session, 6 new checkins.
This is a total of 62 new checkins since we started the new TEN-TEC-RADIO-NET Group!

Thanks for all who continue to support our TEN-TEC nets and as I have already posted on the TEN-TEC-RADIO-NET Group header, I truly feel that all of you are part of an "elite" group of Amateur Radio Operators who are dedicated to both TEN-TEC, INC., their products and to the TEN-TEC 40 meter and 20 meter SSB nets.

I want to thank all of you for your continued support for me. God bless you and your families.

John,

I generally have problems copying the 40M net. This is probably due to limits imposed by propagation on 40. Put another way, it seems to be a matter of location, location, location.

This afternoon was shaping up much the same, and I decided to boost speech processing to 34 from 27. The gain was increased from 38 to 40. Granted, I can’t be certain that this helped, but it matters not. After all, I got through. For what it’s worth, I’m using a Kenwood MC-60A mic w/o amplification and set to low impedance.

Obviously your KW reached West MI, but the band was full today making copy difficult. Were you using the quad? I was on an 80M loop. I planned to try my vertical to see if the situation might improve. As an antenna, it made a great dummy load.

Being very nearly deaf, I have to use cans. Until the Omni VII, I could only work cw. This radio lets me tune in SSB which to me is a minor miracle. That’s why my question was about the Ten Tec headset audio reception. I need maximum intelligibility. I know you forwarded my question, but the reply was lost in the rf swamp.

Anyway, I had a great time. Thanks for being there and hope to talk to you Sunday.
73,
Mark, K8MAZ

Subject: [ten_tec_radio_net] TEN-TEC OMNI VII SETTINGS

I would like to have your input on the RF Gain settings when using the Omni VII. I have heard several different views on this in the past, but would like to hear from those who are a part of the elite TEN-TEC-RADIO-NET Group.

I personally have found that if I set my Omni VII RF Gain to 50% when I am recording someone else's transmissions and playing them back, that a lot of the hash and band noise is reduced, which makes for a more accurate recording and playback.

Also, what do you have your SP set to for normal round table discussions, compared to calling for DX? I have mine set at 25% when running the nets.

Thank you for your input on these.

Qualified for the Certificate on Sunday March 31. It came in the mail today. This is a Great looking document! When the package arrived in the mail, the YL ask me what it was. As a belated April Fools Joke, I told her that I had taken out a loan for $18,000.00 and that an ALL NEW TEN TEC Station should be arriving any day now. Have you ever wondered just how loud a little woman can HOLLER? I sure hope that Miss Brenda, don't make me sleep on the couch tonight. Heck, just hope I get some supper!!

Wade, thank you for your sharing about your new TEN-TEC Certificate. Are you out of the "doghouse" yet? Smile and the whole world smiles with you!

I would like to hear from everyone who has received their certificate. Are you as happy as Wade? Also, have you framed it and hung it on the wall yet?

It would be nice if many of you can take a picture of it and post in in the PHOTOS section of the TEN-TEC-RADIO-NET Group. This is your Group and your contribution is most welcomed. Thank you for your continued enthusiasm and support of the TEN-TEC nets.

CC:

As the weekend is here I want to remind everyone that the TEN-TEC 40 meter and 20 meter SSB nets will meet this Sunday April 7th. The 40 meter net starts about 19:00 UTC around 7.260 and the 20 meter net follows at 20:00 UTC around 14.325.

Take note of the new revised HEADER on the TEN-TEC-RADIO-NET Group. I have extended an invitation to ALL members of other TEN-TEC Groups to join our Group. I fully realize that there are many who have vast knowledge and experience with TEN-TEC products and this could be shared with the members of our Group. We are ALL members of the same Amateur Radio Fraternity.

As far as the midweek Test Sessions are concerned, I want to ask for your input and if you want to continue this. The first Test Session was on 14.325 and 18 people checked in and this past Wednesday's Test Session was on 7.260 and 33 people checked in.

Let me know how you feel about continuing these Test Sessions. Thank you.

Nice comparison.

If I understood this right, you pay twice as much money for the 7600, just so that you can actually see the noise that you are unable to eliminate.

With the Eagle, you not only cannot see the noise, you can't hear it either. What a piece of junk!

From: kj4ws
Topic: 189  Message: 189

Greetings to All,
First let me say that I am really impressed by the Eagle's performance,in the video. It was amazing to watch the Eagle outperform the Icom. Also, I had no idea that the Orion II had so many features. Thanks to John. I have been drooling over the sales brochures that arrived with my Ten Tec Net Certificate. I am looking forward to trying out 2 Beverage Antenna's and a Separate Transmit Antenna. This will be possible for me one day. As John suggested, we have uploaded a picture of the Certificate,in it's place of honor. I think it fits in really nice among the FEMA, Hazardous Materials and Volunteer Fire Department Awards that I have gathered over the years. Please, check it out in the Photo's section. Looking forward to the TT Net today!

Pretty impressive. Creating silence from a power line fault across the street. I could barely detect any difference with the NB on or off with the 7600. More radio, less $$$. A no brainer for me.

Hi John,

FYI, I received my certificate earlier last week, It is really sharp looking. No onward to the 25 chech-in's.

I'm glad you were able to copy my 20 watts today with my Argonaut V on 20 meters. It really is a fun rig! Too bad I needed to use my Orion II and legal limit amp to make it into the 40 meter net....using a relay! Thanks for the great job!

73,
Bill/K1FPV

# 197. TEN-TEC 40 METER & 20 METER NET RESULTS 4-7-2013

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-04-08 02:30:28 UTC
From: John Occhipinti
Topic: 197  Message: 197

The TEN-TEC 40 meter SSB net took place today officially at 19:00 UTC on 7.261 and we had 72 checkins. (We actually were on at 18:00 UTC as some were checking radios, audio and RFI).

The 20 meter SSB net followed at 20:00 UTC on 14.325 and we had 80 people check in. I want to thank Lloyd N2KPC and Tony VE3DWI for assisting with the relays. Also, thanks to John KC2QMA for streaming the live audio during the nets.

CONGRATULATIONS to the 7 new TEN-TEC Certificate winners!

1.K4WWL Dexter NC
2.WB8CTC Joe OH
3.WD8BOU Ed OH
4.W9OKV Gene IL
5.N4MJ Glen TN
6.K0ZBI George MN
7.KB9QZI Tony IL

We had 29 new people checking into the nets today! It is amazing how many TEN-TEC radios are on the air.

We could potentially have 14 new certificate winners next week. There are 8 people who need only 1 more checkin and there are 6 people who need only 2 more checkins.

Praise is starting to come in from the ones who have already received their first certificate. A great big thanks to Jim Wharton NO4A, Vice President TEN-TEC Inc. for his generosity.

Looking ahead there are quite a few people who will be getting their 25 checkin Silver Certificate in a few more weeks! Thanks to all of you for your support. Have a great week.

Ray, the best thing to do in cases like that is to set your TEN-TEC mug on the desk and pour a nice cup of coffee into it.
And if the frustration gets too great, you pour something a little stronger into it! (hi)

I guess the next step is to start an TEN-TEC SWL Certificate.
We can offer two awards:

1) Heard them on the air 10 times
2) Heard them on the Internet 10 times

73
Rick, DE1DEC (that□s my SWL call sign)

Rick, I have been informed by several "hams" never to put any cup, glass or mug on their desk, because the temptation to pour any liquid into these is overwhelming.

Reasons:

1. Some have accidentally spilled this liquid on their radio, with very disappointing results.

2.Some have forgotten that they have certain addictions and transmitted over the radio while under the influence, which got them in hot water with both the FCC and even worse with their wife.

3.As a worse case incident, the "MUG" was responsible for at least one person to have their "mug shot" displayed on You Tube, with the caption,
OPERATING A HAM RADIO WHILE UNDER THE INFLUENCE.

The 12 step program for this is found in "THE AMATEUR'S CODE"!

Rick, thanks for helping to keep the "Group" in a jovial and relaxed mood. I would like to hear more real life experiences with mugs on your desk.

From: Rick - DJ0IP / NJ0IP
Topic: 197  Message: 204

John,

Here is some real life experience:

I think I have about 1000 hours of operating the radio with a mug on the desk, and it wasn't empty.
Without the coffee, I couldn't have stayed awake for 40+ hours during a 48 hour contest.

The real danger is not to the radios, but rather to the keyboard.
All of the radio gear is raised a few inches on a riser, except for the key, mic, and keyboard… and sometimes the VFO POD.

Spilling coffee, or tea into a keyboard is not so bad.
You can rinse an unplugged keyboard with water, let it dry, and it usually works again, except:
- Coca Cola will usually kill it, but if you clean it fast enough, it sometimes survives.
- Red Wine is CERTAIN DEATH.

In addition, I have worked sitting in front of a computer screen since 1983.
I have many thousands of hours experience drinking next to the keyboard.
As a result of having spilled several things into keyboards in the early days of computers, I have developed two procedures to help avoid disaster:

1. NEVER use something like a wine glass or tall glass. Instead, use a short wide glass or cup. I used to have one that was made for use in cars (before cars had cup holders). It had a base that was at least twice as wide as the top. Almost impossible to knock over. But it got lost in the transatlantic move.

2. DRINK SQUARE. Always move the arm in right angles – (right-handed), move it first to the right, then straight to the glass or cup, then reverse the procedure... pull the arm straight away from the table, and then back to the mouth. NEVER move the arm diagonal using the shortest path to the cup, because that passes directly over the keyboard. THIS IS NOT A JOKE. This is how I drink when sitting at the desk. You can train yourself to do this. Of course I sometimes forget and drink that way when sitting at the dinner table. It looks pretty silly and I've been asked often why I do that. It dates back to days to where keyboards cost $100.

To be honest, I couldn't imagine a contest without coffee.
That's like ham radio without Ten-Tec!

From: Ken Bandy, KJ9B
Topic: 197  Message: 206

I have another real-life experience to add to this cautionary thread of "DWO" (drinking while operating). In my line of work, I used to spend countless, long, boring hours behind a sound console, primarily in sound reinforcement applications. One day, when operating for a luncheon at the convention center I worked at, I had a large plastic cup of RC Cola (high sugar content, before I was concious of my calorie intake). This was a low pressure gig, one mic on a lecturn, operating from a sound booth elevated above the floor of the hall. I had the cup sitting next to the console, and as I drew it close to me to take a sip, as I recall, the bottom of the cup brushed the edge of the console enough to tip it, causing me to lose my grip of the cup, spilling the contents of said cup onto the faders of the console. This was an old Yamaha 916 console, as I recall. The faders were resistive-plastic units with light seals along the cut-out in the console top, designed to keep dust from getting in so easily, but not liquids. Mind you, this was during the gig, while the audience was eating, before the actual speaking had started. So, I immediately became the "human wet-dry vac", sucking as much of the RC cola out of the fader throws as I could. My co-worker, who was manning the light board next to me couldn't stop laughing at me. I'm happy to report that the console worked perfectly for that gig, and well into the future. Only issue was the faders offered a little more physical resistance than they had in the past.

73,
Ken, KJ9B

I have tried to avoid getting into the discussion BUT ...  My doctor stated that I was not drinking enough water
so after a few rounds of discussion, I gave in.  I told him I was addicted to mixed drinks and could not drink
just water.  I now have two pots of coffee each day to keep the water level up to needs.  Now that it is warming
up, I have cut back to just one pot of coffee a day but added at least a half gallon of iced tea.

My doctor was not too happy with the "water" intake BUT you always have to make adjustments.  Oh, BTW,
I have never spilled my mixed drinks on my desk.  (Now that I have said that, I might clear a bigger space for
my tea or coffee!

Rick, I have been informed by several "hams" never to put any cup, glass or mug on their desk, because the temptation to pour any liquid into these is overwhelming.

Reasons:

1. Some have accidentally spilled this liquid on their radio, with very disappointing results.

2.Some have forgotten that they have certain addictions and transmitted over the radio while under the influence, which got them in hot water with both the FCC and even worse with their wife.

3.As a worse case incident, the "MUG" was responsible for at least one person to have their "mug shot" displayed on You Tube, with the caption, OPERATING A HAM RADIO WHILE UNDER THE INFLUENCE.

The 12 step program for this is found in "THE AMATEUR'S CODE"!

Rick, thanks for helping to keep the "Group" in a jovial and relaxed mood. I would like to hear more real life experiences with mugs on your desk.

John, K3UR

John at all,

While working as a Communications technologist for the Ontario Provincial Police (OPP) in Northern Ontario, I was also responsible for maintaining the Com-Center equipment. Needless to say that most of the dispatchers liked coffee, or other volatile corrosive drinks, and always had a cup of one or the other on their operating desk. After a few spills, the com-center Staff Sergeant asked me to come up with a solution as banning drinks all together was likely to incite a riot hi.. hi.

I found, like Rick, a coffee mug that had a very wide base and it became standard equipment overnight. They all were more than happy to purchase their own cup. It was then that I instituted a regular "clean-up" program for the dispatch console's keyboards. After taking a keyboard apart and cleaning the membranes etc. I could inform each dispatcher what kind of snacks they ate while on duty as the small crumbs left telltale evidence around for me to dissect hi.. hi. The incentive too was that keyboards rarely acted up after this and, yes, Coca-Cola or similar drinks were the worst kind.

Tony VE3DWI.

John,

Here is some real life experience:

I think I have about 1000 hours of operating the radio with a mug on the desk, and it wasn’t empty.
Without the coffee, I couldn’t have stayed awake for 40+ hours during a 48 hour contest.

I never have a mug on the desk top only because there’s no room for it. I would like to share a pipe smoker’s dilemma, though. I have been a pipe smoker for years. My dentist once asked what it would take to get that pipe away from me. I muttered words in the spirit of “outta my cold, dead hands,” and got a new dentist. Anyway, as a former 100 percent cw op, and tnx to the Omni 7, I can get on ssb. The problem? I could send cw while smoking, but had to learn that before I talk when NC calls, to take the pipe out of my mouth. Otherwise I wind up doing the hot ashes in-the-lap dance. This has happened to me and thankfully I was using PTT, not VOX. 73

I have another real-life experience to add to this cautionary thread of "DWO" (drinking while operating). In my line of work, I used to spend countless, long, boring hours behind a sound console, primarily in sound reinforcement applications. One day, when operating for a luncheon at the convention center I worked at, I had a large plastic cup of RC Cola (high sugar content, before I was concious of my calorie intake). This was a low pressure gig, one mic on a lecturn, operating from a sound booth elevated above the floor of the hall. I had the cup sitting next to the console, and as I drew it close to me to take a sip, as I recall, the bottom of the cup brushed the edge of the console enough to tip it, causing me to lose my grip of the cup, spilling the contents of said cup onto the faders of the console. This was an old Yamaha 916 console, as I recall. The faders were resistive-plastic units with light seals along the cut-out in the console top, designed to keep dust from getting in so easily, but not liquids. Mind you, this was during the gig, while the audience was eating, before the actual speaking had started. So, I immediately became the "human wet-dry vac", sucking as much of the RC cola out of the fader throws as I could. My co-worker, who was manning the light board next to me couldn't stop laughing at me. I'm happy to report that the console worked perfectly for that gig, and well into the future. Only issue was the faders offered a little more physical resistance than they had in the past.

73,
Ken, KJ9B

John,

Here is some real life experience:

I think I have about 1000 hours of operating the radio with a mug on the desk, and it wasn’t empty.
Without the coffee, I couldn’t have stayed awake for 40+ hours during a 48 hour contest.

The real danger is not to the radios, but rather to the keyboard.
All of the radio gear is raised a few inches on a riser, except for the key, mic, and keyboard… and sometimes the VFO POD.

Spilling coffee, or tea into a keyboard is not so bad.
You can rinse an unplugged keyboard with water, let it dry, and it usually works again, except:
- Coca Cola will usually kill it, but if you clean it fast enough, it sometimes survives.
- Red Wine is CERTAIN DEATH.

In addition, I have worked sitting in front of a computer screen since 1983.
I have many thousands of hours experience drinking next to the keyboard.
As a result of having spilled several things into keyboards in the early days of computers, I have developed two procedures to help avoid disaster:

1. NEVER use something like a wine glass or tall glass. Instead, use a short wide glass or cup. I used to have one that was made for use in cars (before cars had cup holders). It had a base that was at least twice as wide as the top. Almost impossible to knock over. But it got lost in the transatlantic move.

2. DRINK SQUARE. Always move the arm in right angles – (right-handed), move it first to the right, then straight to the glass or cup, then reverse the procedure... pull the arm straight away from the table, and then back to the mouth. NEVER move the arm diagonal using the shortest path to the cup, because that passes directly over the keyboard. THIS IS NOT A JOKE. This is how I drink when sitting at the desk. You can train yourself to do this. Of course I sometimes forget and drink that way when sitting at the dinner table. It looks pretty silly and I've been asked often why I do that. It dates back to days to where keyboards cost $100.

To be honest, I couldn't imagine a contest without coffee.
That's like ham radio without Ten-Tec!

Clayton, thank you for making me feel a little younger! A big thanks to you, Rick, Ken, Tony and Mark for your great comments about drinks on your desks or near your radios.

I want to remind everyone that we will be having a 40 meter Test Session tomorrow, Wednesday at 19:00 UTC on 7.261.

Have your various antennas ready to switch to and you can test other mics and various settings on your radios. I will be set up to record you and play your recordings back for you to hear.

Thanks again and remember this group is allowed to discuss anything that is ham radio related.

The real danger is not to the radios, but rather to the keyboard.
All of the radio gear is raised a few inches on a riser, except for the key, mic, and keyboard… and sometimes the VFO POD.

Spilling coffee, or tea into a keyboard is not so bad.
You can rinse an unplugged keyboard with water, let it dry, and it usually works again, except:
- Coca Cola will usually kill it, but if you clean it fast enough, it sometimes survives.
- Red Wine is CERTAIN DEATH.

In addition, I have worked sitting in front of a computer screen since 1983.
I have many thousands of hours experience drinking next to the keyboard.
As a result of having spilled several things into keyboards in the early days of computers, I have developed two procedures to help avoid disaster:

1. NEVER use something like a wine glass or tall glass. Instead, use a short wide glass or cup. I used to have one that was made for use in cars (before cars had cup holders). It had a base that was at least twice as wide as the top. Almost impossible to knock over. But it got lost in the transatlantic move.

2. DRINK SQUARE. Always move the arm in right angles – (right-handed), move it first to the right, then straight to the glass or cup, then reverse the procedure... pull the arm straight away from the table, and then back to the mouth. NEVER move the arm diagonal using the shortest path to the cup, because that passes directly over the keyboard. THIS IS NOT A JOKE. This is how I drink when sitting at the desk. You can train yourself to do this. Of course I sometimes forget and drink that way when sitting at the dinner table. It looks pretty silly and I've been asked often why I do that. It dates back to days to where keyboards cost $100.

To be honest, I couldn't imagine a contest without coffee.
That's like ham radio without Ten-Tec!

Rick, I have been informed by several "hams" never to put any cup, glass or mug on their desk, because the temptation to pour any liquid into these is overwhelming.

Reasons:

1. Some have accidentally spilled this liquid on their radio, with very disappointing results.

2.Some have forgotten that they have certain addictions and transmitted over the radio while under the influence, which got them in hot water with both the FCC and even worse with their wife.

3.As a worse case incident, the "MUG" was responsible for at least one person to have their "mug shot" displayed on You Tube, with the caption, OPERATING A HAM RADIO WHILE UNDER THE INFLUENCE.

The 12 step program for this is found in "THE AMATEUR'S CODE"!

Rick, thanks for helping to keep the "Group" in a jovial and relaxed mood. I would like to hear more real life experiences with mugs on your desk.

John, K3UR

Yes John, I do remember Dr. Ben Casey. In fact they even wrote and recorded a song back then entitled, "Hey Ben Casey, Can You Mend A Broken Heart"?

My TEN-TEC mug sits proudly in my hamshack, but remains free of any liquid. I use it to hold various pens and markers.

I will admit that I always keep a plastic bottle of spring water in my hamshack. The bottle fits snuggly into a large foam base and it is around to my right on another desk and never gets near any of my ham radio gear or recording gear. When I need to "wet my whistle", I take a sip and immediately put the top back on.

Rick, there is an old saying, "an ounce of prevention cures a pound of work".

I hope to talk to a lot of you this afternnon at 19:00 UTC on 7.261 for the special 40 meter Test Session. As Jack Benny use to say, "thanks for the memories"!

Topic: 216  Message: 216

First I would like to Award Two ATABOYS, to the first person who can tell me the first Line or sentence in the theme to Gilligan's Island. Everybody remembers " A Millionaire and his wife, A Movie Star and The Skipper Too." and such. I know the answer to this and use it as a Brain Teaser for folks. I too was always hoping that the Doctor on the run, would find that elusive " One Armed Man " ..... My Mother always felt so sorry for David Jansen. I would always run home from school to watch Bat Man ..... I will hear from you folks later today or Sunday for sure, on the Ten Tec Net!
My antenna system works just fine with the Amplifier except on 40 Meters. Some have told me that I may have too much or many grounds on the system? It is a basic 75 Meter Dipole, up 30 feet, with Ladder Line feed. There is about 12 feet of RG-213 going out the window to my own design Triple Core 1:1 Current Balun. Also, about 15 feet of Stranded Copper wire about the size of my finger going to an 8 foot Ground Rod which is Bonded to the Cable TV, Electrical and Water Pipe Ground system, just outside the window. Another Elmer told me to use Coax as the ground and alternate Center Conductor and Ground shorted together about every 3 feet. I realize that RF does Strange things at different frequencies. Does anyone have suggestions?
I am ready to Award the AttaBoys for the Gilligans Island Theme song! All suggestions about the antenna are welcome. I may need to invent an RF Sponge to rid myself of these troubles. See you all on the Net! Same Bat Time .... Same Bat Channel....

Wade,

Add 13 feet of openwire to the feedline before connecting to the balun.
I am assuming you are using a matchbox, and not just the built-in ATU of the rig.

Your problem is, the feedpoint impedance on 40m at the antenna is somewhere between 2k and 3k Ohms.
What it actually is at the balun will depend on the length of the openwire, but worst case, it is also 2k to 3k Ohms.
13□ of feedline is about 1/8 wavelength on 40m, enough to significantly reduce the impedance to a matchable value.

Boys. I go all the way back before TV. Remember; "The Shadow", "The Green Hornet" and "Amos and Andy" on the large Philco floor model radio, that also had short wave, ship to shore and even amateur radio bands to listen to?

"How About That"? from the famous New York Yankee announcer, Mel Allen.

Moving on to TV; "It's Howdy Duty Time", "Captain Video", "Racked Squad", "Naked City", "The Lone Ranger", "Hop Along Cassidy", "The Milton Berle Show", "The Bob Hope Show", "The Jack Benny Show", "The Jackie Gleason Show", "The Eddie Fisher Show", "The Perry Como Show", "The Andy Williams Show", "The Danny Thomas Show", "Ozzie and Harriet" and "The Ed Sullivan Show".

Now look at all of the trash they have on TV these days. I say, "bring back the "Happy Days" of TV.

I could keep going on and on. Most of these programs started in the late 1940's and were very popular into the 1950's and some even into the 1960's.

Now, I may have to take away a few "atta-boys". Nobody picked up on my deliberate misquote below in my response to John and Rick. The correct quote should be; "an ounce of prevention is worth a pound of cure" and not, "an ounce of prevention cures a pound of work".

Yes, ham radio can be a lot of fun and we can keep having fun on this Group, while still remaining "good will ambassadors for Amateur Radio!

Boys. I go all the way back before TV. Remember; "The Shadow", "The Green Hornet" and "Amos and Andy" on the large Philco floor model radio, that also had short wave, ship to shore and even amateur radio bands to listen to?

"How About That"? from the famous New York Yankee announcer, Mel Allen.

Moving on to TV; "It's Howdy Duty Time", "Captain Video", "Racked Squad", "Naked City", "The Lone Ranger", "Hop Along Cassidy", "The Milton Berle Show", "The Bob Hope Show", "The Jack Benny Show", "The Jackie Gleason Show", "The Eddie Fisher Show", "The Perry Como Show", "The Andy Williams Show", "The Danny Thomas Show", "Ozzie and Harriet" and "The Ed Sullivan Show".

Now look at all of the trash they have on TV these days. I say, "bring back the "Happy Days" of TV.

I could keep going on and on. Most of these programs started in the late 1940's and were very popular into the 1950's and some even into the 1960's.

Now, I may have to take away a few "atta-boys". Nobody picked up on my deliberate misquote below in my response to John and Rick. The correct quote should be; "an ounce of prevention is worth a pound of cure" and not, "an ounce of prevention cures a pound of work".

Yes, ham radio can be a lot of fun and we can keep having fun on this Group, while still remaining "good will ambassadors for Amateur Radio!

Yes John, I do remember Dr. Ben Casey. In fact they even wrote and recorded a song back then entitled, "Hey Ben Casey, Can You Mend A Broken Heart"?

My TEN-TEC mug sits proudly in my hamshack, but remains free of any liquid. I use it to hold various pens and markers.

I will admit that I always keep a plastic bottle of spring water in my hamshack. The bottle fits snuggly into a large foam base and it is around to my right on another desk and never gets near any of my ham radio gear or recording gear. When I need to "wet my whistle", I take a sip and immediately put the top back on.

Rick, there is an old saying, "an ounce of prevention cures a pound of work".

I hope to talk to a lot of you this afternnon at 19:00 UTC on 7.261 for the special 40 meter Test Session. As Jack Benny use to say, "thanks for the memories"!

My .02 - I live NW of Chicago and use an antenna for TV. There are a few channels carrying some of the old shows - ME TV, RTV (Retro TV)WGN Americ and some others late at night. You can also find quite a few on DVD now, I see them in the local library, whole DVD sections for TV shows. If you want to search librarys, try worldcat.org. And there's always YouTube.

My favorite is The Rifleman.

John, I think Naked City is on RTV in Atlanta this afternoon.

Hope to catch you on 40 from the mobile in a little while.

Andy K9ARM

Somehow I figured you’d get that one, John. Those songs bring back favorite memories as a young kid in Dallas. We really had tumbleweed in the back yard.
Oh yes, and while we’re at it, let’s not forget Charlie Maxwell. Man, I forgot entirely about Virgil Trucks. I suppose the Tigers almost made the move North almost worthwhile. 73

Rick, those were the good ole days when gay meant to be happy, when Coke was a refreshing drinking. when coming out of the closet meant that your punishment time was over and you could once again sit around the fireplace with the rest of your family.

Of course bible reading and prayer was part of your punishment. Sometimes it was necessary for Dad to take off his leather belt (wow is the ACLU listening)?

Yes, although my grandparents came from Italy, we did not call ourselves Italian Americans, we were just Americans! We grew up living with all different races and nationalities and got along just like family. We knew how to share and help someone when they were down and yes we survived.

This is how Amateur Radio use to be. Now we have jamming, music and tapes being played back over on-going QSO's. Some have even made threats over the ham bands and others tried to get certain people fired from their jobs.

I have been an Official Observer with the ARRL for many years and can write a book on these gross vilolations of Part 93. This is why we must be an example to others and respect the priviledge that we have as Amateur Radio Operators.

I am off my soapbox....now back to the certificate Data Base.

From: John Occhipinti
Topic: 232  Message: 232

We had a 40 meter Test Session today at 19:00 UTC on 7.261 and 25 people checked in. We also had 3 first time checkins. Thank you to Lloyd N2KCP in NJ, who is the Official Relay Station for the TEN-TEC nets for his help today.

Thanks to John KC2QMA for streaming the live audio over the internet during our nets. We had 1 new certificate winner today.

CONGRATLATIONS to:

KJ9B Ken in IN

Looking forward to this coming Sunday, there are 9 people who need just 1 more checkin and 5 other people who need just 2 more checkins to qualify for their first TEN-TEC Certificate.

There is one person who needs just 1 more checkin and one other person who needs just 2 more checkins to qualify for their second certificate, the TEN-TEC SILVER CERTIFICATE!

Thanks for your support of the TEN-TEC nets.

Greetings All,
I would like to extend an invitation to all Ten Tec users and All on the Ten Tec Net. I call the Tennessee Phone Net at 6:30 PM Central every Wednesday night. And the Net operates 6 nights a week. We do call our Surrounding States and then Any Station Anywhere, starting around 7:10 PM .... This is a Traffic Net, so not much Ragchew going on, but All are Welcome. The average is 130 to 160 stations each Net. Come on by and you may hear a station/friend not heard from in a while.
tnx and --... ...-- de Wade/KJ4WS

Moving on to TV; "It's Howdy Duty Time",

REPLY

How about Spike Jones? That crazy band of his with musical antics.
Talk about laughing for a half hour ....

BTW: It's Howdy Doody (not Duty). Do I get a prize for that catch??
(smile)

Hey John I checked in early, with KC2QMA, should received one point towards the certificate, can you check this for me.

Thanks

73's KY4OZ Oz.

What’s wrong with the way we do it now?

I’m not going to use either of those, although I do have an account on both.

The only thing I suggest is, when we start with OT subjects, let’s be sure and put OT in the subject line and then a few words describing the subject.

That way people can delete threads they are uninterested in without reading them.

Rick, there is nothing wrong with the way the new TEN TEC RADIO NET Group is operating. We are here because our free speech was questioned on some of the other groups.

We were not free to mention the TEN-TEC nets or the TEN-TEC Certificate Program and it also led to very personal attacks against me and my family.

This is the reason why I started this new Group several weeks ago. Those people are not here, therefore we are free to discuss things that are expedient to the Group.

We are dedicated TEN-TEC users and supporters and TEN-TEC INC is supporting the TEN-TEC NETS and the Certificate Program.

What more can ask for? Rick, thank you for all of your much needed input
that you have given us. There will be no Facebook or Twitter here.

Rick, those were the good ole days when gay meant to be happy, when Coke was a refreshing drinking. when coming out of the closet meant that your punishment time was over and you could once again sit around the fireplace with the rest of your family.

Of course bible reading and prayer was part of your punishment. Sometimes it was necessary for Dad to take off his leather belt (wow is the ACLU listening)?

Yes, although my grandparents came from Italy, we did not call ourselves Italian Americans, we were just Americans! We grew up living with all different races and nationalities and got along just like family. We knew how to share and help someone when they were down and yes we survived.

This is how Amateur Radio use to be. Now we have jamming, music and tapes being played back over on-going QSO's. Some have even made threats over the ham bands and others tried to get certain people fired from their jobs.

I have been an Official Observer with the ARRL for many years and can write a book on these gross vilolations of Part 93. This is why we must be an example to others and respect the priviledge that we have as Amateur Radio Operators.

I am off my soapbox....now back to the certificate Data Base.

Well said, John. I'd like to add one more supportive point. Our net, like all groups if they are to move forward, must go through a "getting to know you" stage. Call it bonding, if you like. Sure we'll have differences of opinion on social or technical issues, but when that happens we'll treat the other guy with the respect he deserves. And this is because we've had an opportunity to know the other guy. This involves keeping an open mind and a degree of—dare I say it—humility.

By no means should we exclude ham radio and all that it's about from our discussions. But we'll do so as radio hams who have agreed to follow the rules when signing the license granted by the agency that established the rules. 73

# 249. RF GAIN ON ORION II, OMNI VII AND EAGLE

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-04-11 20:07:03 UTC
From: John
Topic: 249  Message: 249

While I was running the special 40 meter Test Session on 7.261 yesterday, I kept backing off on the RF Gain on my Omni VII because of the extremely high noise level.

I lowered my RF Gain all the way to 25% without losing any reception from those on the net.

I have owned 19 HF radios and could never turn the RF Gain down without losing reception until I got my Omni VII.

I would like to hear from others on how far down they can turn their RF Gain and still be able to hear others comfortably.

John, K3UR

Hi, John....

For me it depends on the band in use. On 80M I never set RF gain above 25%. As the frequency goes up, so does the RF gain I use, getting to be about 60% on 10M. It could probably be lower but those settings sound good to me.

I found on my Orion II when conditions are good I can lower my RF gain to as low as (10) and still copy with much lower noise.
Another thing I noticed with the Orion II is the quality of the Audio. Now being a recording engineer I am a bit critical of audio and the Orion II has a smooth rich sound RX that makes listening for long periods easy on my ears.
I LOVE MY ORION II!

From: Tony Lelieveld
Topic: 236  Message: 254

I changed the subject to movies.

My research tells me that it was Stan Jones who wrote the song in 1948 but it was Gene Autry who sang it in the movie "Riders in the sky" in 1949.

I have great memories from that era. I was born in the Netherlands in 1942. As our small village didn't have a movie theater, it was the local Christian youth organization that put on movies in a gym hall for kids between ages of 7 and 12 years old.

I vividly remember asking our mom for 10 cents each to go the the Saturday afternoon show with my twin brother. I was the leader as I was 10 minutes older than him hi.. hi. For a family with eleven (11) kids, even 20 cents needed to be scraped from somewhere. The theater had no seats but it was first class accommodations, sitting on your butt on the wooden floor.

That did not deter us from having a great time. Cowboy movies, as we called them, were a favorite. Gene Autry, Roy Rogers, Hopalong Cassidy etc. Especially when the posse's where catching up with, and gun-fighting the bad guys, all the kids where right in it and hollered encouragements to the good and booed the bad guys. After the show we all played "cowboys and Indians" and as we were shot many times, we pretended to fall comically to the ground.

You would die laughing if you had heard the way we pronounced the names, in Dutch, of these favorite movie stars. My older sister immigrated to Canada in 1952 and when she came to visit us two years later she brought us a cowboy hat, a cap gun 6 shooter with holster and a Red bandana. My brother and I were the envy of the neighborhood kids. Aaah fond memories indeed.

Tony VE3DWI.

# 255. Re: [ten_tec_radio_net] RF GAIN ON ORION II, OMNI VII AND EAGLE

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-04-11 23:51:45 UTC
From: Jerry Rogers
Topic: 249 Message: 255

At this shack it goes like this:

The Omni VII was ran between 25/35 % for the low bands. When it was on the upper bands I would put the RF gain about 60%, but only a few time needed it higher. And there were times on 20 meters and above 50% was all that was needed.

The Orion II has settings that are a little higher than the Omni VII, but are two different radios. I keep the RF at 50/60 %, and if the station is strong I might go for 30/40 %. I believe the highest I ever used it was 80%, but that was just because of conditions.

The Eagle is set at 12 - 1 o'clock. Again, it depends on the bands conditions, etc. Half the time it's set at 10- 11 o'clock.

All three TenTec radios have impressed me with the best signal-to-noise ratio over any JA I have ever owned. That's what we should be looks for in a radio, but so many run their radios at 100%. I'm glad my ears are not listens to those radios.

Hi Tony, thanks for the memories. How many remember Tim McCoy and Annie Oakley? Then Glen Campbell had to come along in the late 60's as, "A Rhinestone Cowboy"!

Subject: Re: [ten_tec_radio_net] Movies.

I changed the subject to movies.

My research tells me that it was Stan Jones who wrote the song in 1948 but it was Gene Autry who sang it in the movie "Riders in the sky" in 1949.

I have great memories from that era. I was born in the Netherlands in 1942. As our small village didn't have a movie theater, it was the local Christian youth organization that put on movies in a gym hall for kids between ages of 7 and 12 years old.

I vividly remember asking our mom for 10 cents each to go the the Saturday afternoon show with my twin brother. I was the leader as I was 10 minutes older than him hi.. hi. For a family with eleven (11) kids, even 20 cents needed to be scraped from somewhere. The theater had no seats but it was first class accommodations, sitting on your butt on the wooden floor.

That did not deter us from having a great time. Cowboy movies, as we called them, were a favorite. Gene Autry, Roy Rogers, Hopalong Cassidy etc. Especially when the posse's where catching up with, and gun-fighting the bad guys, all the kids where right in it and hollered encouragements to the good and booed the bad guys. After the show we all played "cowboys and Indians" and as we were shot many times, we pretended to fall comically to the ground.

You would die laughing if you had heard the way we pronounced the names, in Dutch, of these favorite movie stars. My older sister immigrated to Canada in 1952 and when she came to visit us two years later she brought us a cowboy hat, a cap gun 6 shooter with holster and a Red bandana. My brother and I were the envy of the neighborhood kids. Aaah fond memories indeed.

Hi John

I have run my omni 7 down to as low as about 18% and it still sounds great.  If the signal is strong that i am listening to it almost sounds like fm ( to me anyway).  Arnt Tec Tec radios fun!

While I was running the special 40 meter Test Session on 7.261 yesterday, I kept backing off on the RF Gain on my Omni VII because of the extremely high noise level.

I lowered my RF Gain all the way to 25% without losing any reception from those on the net.

I have owned 19 HF radios and could never turn the RF Gain down without losing reception until I got my Omni VII.

I would like to hear from others on how far down they can turn their RF Gain and still be able to hear others comfortably.

When my wife comes into the shack, I found turning the RF Gain all the way up and putting on my headphones is about optimal.

I'm just kidding honey!

Standard operating for me is to have the AF Gain nearly all the way up and RF Gain adjusted as low as possible on my 565 Orion to achieve the best balance of signal and minimized noise.

While the S Meter is occasionally of some value to me, for the most part I ignore it and rely on what I hear.

Gene / K7TXO

On the Jupiter, I generally have the AF at 100% and use the RF to control volume. Seems to keep the signal:noise constant through the entire range. I literally play it by ear and RF can be anywhere between 20-80%. If I need to tweak loudness I use the headset volume control.

Works for me. Your mileage may vary.

John & John,

I'll try listening to the live feed from here in N.E. Massachusetts as I often have trouble hearing even the relay stations. I'm guessing it is the orientation of my dipole. The 20 meter net is never a problem.

Thanks for the good work guys!

TEN-TEC RADIO NET

LIVE Audio Feed from Nashville, TN.

Direct link to Audio feed: http://www.qrz.com/db/KC2QMA
<http://www.qrz.com/db/KC2QMA>

This audio feed will be available every Sunday from Nashville TN
starting at (19:00 UTC 40M) & (20:00 UTC 20M).

*Schedule & conditions permitting.

Go to the Link above and click on the play button in the video window
and after a short advertisement the audio will begin to play. Some delay
of the audio due to internet latency in normal.

(The station in Nashville TN is a Ten Tec Orion II - 75M wire dipole
@65ft flat top. The receiver is typically set to 2.7 to 3.0 Bandwidth
without any DSP or noise reduction. For poor band conditions the
receiver of the Ten Tec Orion II will be adjusted for best intelligible
signal and may have reduced bandwidth and employ some DSP noise
reduction.)

Hope you enjoy and thanks for supporting the Ten Tec SSB NET!

this is unfair .... I cannot hear any audio from TN on-line feed.
I can see graphs responding to audio but hear nothing. I am doing something wrong with this PC ...
To compound this, I cannot hear any net control stations on air during the 40 meter net except for few stations checking in. Arrrgh!

Oh well, there is always 20 meters.

# 276. TEN-TEC 40 METER & 20 METER NET RESULTS 4-14-2013

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-04-15 02:14:11 UTC
From: John Occhipinti
Topic: 276  Message: 276

The TEN-TEC 40 meter net was in progress on 7.261 at 18:00 UTC taking early checkins and we had 89 people check in. The TEN-TEC 20 meter net followed at 20:00 UTC on 14.325 and we had 63 people check in.

There were 2 TEN-TEC Silver Certificate winners (25 checkins) and congratulations to:

1.W3TS Mike PA
2.AB4IQ ED KY

There were 6 TEN-TEC (10 checkins) Certificate winners and congratulations to:

1.KC8MZR Gene WV
2.W9GQK Ed IL
3.WA4OSS Charlie NC
4.K9DY Steve IN
5.N4EV Clayton SC
6.K4CPD David TN

There were 39 new people checking into our nets today and there is a total of 533 different people who have checked into our nets since January 20th of this year when the TEN-TEC Certificate Program started.

Special thanks to Lloyd N2KPC and Paul WG0G for the outstanding job they did with the relays today. Also a special thanks to John KC2QMA for streaming the live audio on the internet during the nets. We have a great team!

I will be posting the new Certificate Data Base in the FILES section shortly. Have a safe and blessed week and thank you for all of your support.

# 278. HAPPY ANNIVERSARY TEN-TEC NETS

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-04-20 00:37:26 UTC
From: John Occhipinti
Topic: 278  Message: 278

This weekend marks the first anniversary of the newly revived TEN-TEC Nets. I bought a new TEN-TEC Omni VII and received it on March 27, 2012 and asked several people where the TEN-TEC net was operating. Everyone told me that when Dudley went to work for Flex Radio, the TEN-TEC net went into dormancy, because nobody wanted to take the net control responsibility.

On April 22, 2012, several weeks later, I asked for TEN-TEC owners to get together with me on 14.245 for a ragchew. After hearing about the great response, I was contacted by Jim Wharton NO4A, Vice President TEN-TEC Inc. asking me to be the new TEN-TEC Net Control and I accepted. He quickly posted this on the TEN-TEC Website to make it official. I had previous experience as net control on East Cars, the Maritime Net and the Yaesu FT-2000 Net.

After 3 months on 20 meters, the net switched to 40 meters on 7.260, because so many more people could check in. As the number of checkins kept increasing each week I was asked to run both a 20 meter and 40 meter net, so on August 12, 2012, I started to conduct back-to-back nets, 7.260 at 19:00 UTC and 14.325 at 20:00 UTC and this has been in effect up until this day.

On September 28th and 29th 2012, My wife Rose and I had the pleasure of attending our first TEN-TEC Hamfest in Sevierville, TN and the first person to greet us was Jim Wharton NO4A, Vice President, TEN-TEC Inc. and Rose and I immediately felt right at home!

In January of this year, 2013, Jim Wharton asked me if it would be alright for us to start a TEN-TEC Certificate Program. After discussing the details, we came up with a 3 Certificate Program. On January 20th we started the TEN-TEC Certificate Program. When someone reached 10 checkins, they would receive a 10 Checkin Certificate. When they reached 25 checkins, they would receive a 25 Checkin Silver Certificate and when they reached 50 checkins, they would receive a 50 Checkin Gold Certificate and all these certificates are personally signed by Jim Wharton NO4A, Vice President TEN-TEC Inc.

Up until today April 19, 2013, we have had 61 people receive their first 10 Checkin Certificate and 2 people have already received their first 25 Checkin Silver Certificate. Since January 20th of this year we have had 533 different people check into our 40 meter and 20 meter SSB nets!

Beginning in February of this year and continuing into March, there were many negative postings on some of the other TEN-TEC Nets. I would post on all 5 TEN-TEC nets weekly about the TEN-TEC Nets and the TEN-TEC Certificate Program. Some did not want me to post about the nets and certificate program and the insults escalated into personal attacks on me. my vocation and my family and I felt it was time to sever ties in order to keep the TEN-TEC Nets from collapsing. So on March 20th of this year, I formed our own TEN-TEC Net Group called
http://groups.yahoo.com/group/ten_tec_radio_net/

SPECIAL ANNOUNCEMENT: Starting this Sunday April 21, 2013 and for this Sunday only, to celebrate our first anniversary and to reward all those who have already signed up as members of the TEN-TEC Radio Net Group, I will reward you with double checkins. If you sign

into the 40 meter net, you will receive credit for 2 checkins. if you sign into the 20 meter net, you will receive credit for 2 checkins. If you sign into both nets this Sunday, you will receive credit for 4 checkins.

I have been perplexed by the fact that 50 percent of the Certificate winners have NOT signed on with our TEN-TEC Radio Net Group. To show my generosity to them, I will extend the double checkins to them also, IF they sign up with the TEN-TEC Radio Net Group by 6 PM, 22:00 UTC this Sunday April 21st. I have access to the members list and will reward all the members of the TEN-TEC Radio Net Group with double checkins this Sunday.

I want to announce that I have appointed Lloyd N2KPC as the Official Relay Station for the TEN-TEC SSB Nets. Lloyd is a very dedicated Amateur Radio Operator, a great humanitarian and a tremendous help to me on both the 40 meter and 20 meter nets. I also want to thank John KC2QMA, a recording engineer, who streams the live audio on the internet during our nets.

Thanks to all of those who support the TEN-TEC NET programs and I appreciate each one of you.

# 279. TEN-TEC FIRST ANNIVERSARY NETS TOMORROW (SUNDAY)

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-04-20 10:28:12 UTC
From: John Occhipinti
Topic: 279  Message: 279

The Special First Anniversary TEN-TEC 40 meter net will be in progress at 19:00 UTC on 7.261 and the 20 meter net will follow at 20:00 UTC on 14.325.

Remember, all signed-up members of the TEN-TEC Radio Net Group will be receiving double credits for your checkins on both nets for this Special First Anniversary of the newly revived TEN-TEC Nets.

All those who sign up as new members of the TEN-TEC Radio Net Group by 6 PM EDST (22:00 UTC) Sunday, will also receive double credits for their checkins. Thank you.

# 280. TEN-TEC FIRST ANNIVERSARY NETS TODAY (SUNDAY)

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-04-21 14:56:03 UTC
From: John Occhipinti
Topic: 280  Message: 280

The Special First Anniversary TEN-TEC 40 meter net will be in progress today (Sunday) at 19:00 UTC on 7.261 and the 20 meter net will follow at 20:00 UTC on 14.325.

Remember, all signed-up members of the TEN-TEC Radio Net Group will be receiving double credits for your checkins on both nets for this Special First Anniversary of the newly revived TEN-TEC Nets.

All those who sign up as new members of the TEN-TEC Radio Net Group by 6 PM EDST (22:00 UTC) today (Sunday), will also receive double credits for their checkins.

One of the major disadvantages of not being a member of the TEN-TEC Radio Net Group is that most of the unsigned members of our nets will probably not even know about the double credits for today. As I checked the new membership list today (Sunday), it shows that nobody has signed up as new members of this Group since I first announced it on Thursday.

Membership does have its priviledges and all members of the TEN-TEC Radio Net Group will be receiving double credits for today's checkins. Thank you for your support.

Just a quick Happy Birthday to the Ten Tec Net. Special Hello to John/K3UR. Believe it or not, several Ham Friends are coming by next Saturday. We plan to fix all of my RF Issues. Thanks to all for accepting my lousy signal so far. It is Summer Time .... Time to take care of all Antenna Issues and get a New Propane Tank for the Grill .. Let the Summer begin ....

# 284. 10 NEW MEMBERS OF "TEN-TEC RADIO NET GROUP' TODAY

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-04-21 23:05:25 UTC
From: John Occhipinti
Topic: 284  Message: 284

I want to thank the 10 new members of the TEN-TEC Radio Net Group that signed up today.

There are 4 people who signed up with names that I cannot put a call sign to. Please send me your full call signs and locations, so I can give you credit for double checkins today on the 40 and 20 meter nets.

1.AFA5PW
2.HAMGUY78
3.PENNKEN
4.WXQN

VERY IMPORTANT: I want to give everyone double checkin credits for checking into the nets today. My hands are tied because many of the members have used "handles" instead of callsigns and I cannot update the Certificate Data Base and be fair to everyone, if I cannot confirm who is a member or not.

Please, I am asking every member of the TEN-TEC Radio Net Group to go to the MEMBERS section and if your full call sign is not listed, please send it to me by email, as I do not want to embarrass anyone.

When I receive this information, then I will give you the extra credits for checking into the nets today. So, I will update the Data Base tomorrow in the regular fashion (1 credit for each checkin today) and make the necessary adjustments to your call sign when I receive the correct information.

I cannot update the new Certificate Data Base today. After today, I will have to update the Data Base, as this is only fair to our other members.

I did not know until today that so many used "handles" instead of full call signs and I hope you can see my point. Thank you for helping me help you.

Hello John,
On the 40 Meter Net of 4/21/2013 .. I did hear WX4QN/Bob check in to the Ten Tec Net. This may help with one of the Call Signs ...Lost in the Ether. Bob/WX4QN is a Regular Check In to the Tennessee Phone Net and I do know his voice quite well. Bob lives in East Tennessee and near the Ten Tec Factory, if memory serves. Sorry but I would have never heard Bob on the 20 Meter Net. Now you have just 4 more to go on your list. Sorry, none of the others ring a bell.

Thanks Wade.

John didn't have the number "4" in my callsign so that may be why he couldn't find match my membership when I checked in.

For some reason yahoo groups would not let me use any of the 3 callsigns I use as my user name on other internet discussion boards so I had to improvise and add my name behind the callsign.

Thanks again,

Bob WX4QN

Date: 2013-04-23 09:36:02 UTC
From: John Occhipinti
Topic: 291  Message: 291

This past Sunday April 21st was the first anniversary of the new TEN-TEC Nets and we had 77 people check into the 40 meter net on 7.261 and 70 people check into the 20 meter net on 14.322.

I am working on updating the Certificate Data Base and should be posting the new Certificate winners on Wednesday. Thank you for your patience.

A big thank you to Lloyd N2KCP, who is my Official Relay Station for the TEN-TEC Nets for the outstanding job he does each week and also for John KC2QMA for streaming the live audio during our nets each week.

From: John Occhipinti
Topic: 278  Message: 292

This past Sunday April 21st. was the first anniversary of the new TEN-TEC SSB Nets and we were honored to have many stations from around the world check into our nets.

We had 77 people check into our 40 meter net on 7.261 and 70 people checked into our 20 meter net on 14.322, including stations from Belgium. England, Netherlands, Italy, Serbia, N. Ireland, Poland, Portugal, Greece and Puerto Rico.

We also had 6 new 10 Checkin Certificate winners. Congratulations to:

1.WB4RHQ Ed TN
2.WB1HGA Ron MA
3.KC9UAA Ron IL
4.N0ENO Rich KS
5.KI0II Ron CO
6.WA0BAG Paul TN

We also had 8 new 25 Checkin Silver Certificate winners. Congratulations to:

1.N2KPC Lloyd NJ
2.KC2QMA John TN
3.W4CM Cecil VA
4.VE3DWI Tony CN
5.W2ZQ Lloyd NJ
6.KY4OZ Oz KY
7.KI4YOB Douglas FL
8.KC4FL John FL

We also had 39 first time checkins on Sunday and we truly appreciate all of the interest and enthusiasm that the TEN-TEC Nets are experiencing.

A special thanks to Lloyd N2KPC in NJ. who is my Official Relay Station for the TEN-TEC SSB Nets. Also a special thanks to John KC2QMA in TN for streaming the live audio of our nets.

Thanks to all of the new members of our new TEN-TEC Radio Net Group. Feel free to post there and also to send pictures of your hamshack and certificates!

I would be remiss if I did not mention Jim Wharton NO4A, Vice President TEN-TEC Inc. for his support and generosity with the Certificate Program. Feel free to send an email to him and tell him what you are telling me about the beautiful certificates and brochures that he has sent you.

I will be posting the new updated Certificate Data Base in the FILES section a short while.

Thank you for your support.

# 296. By way of introduction

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-04-25 11:08:19 UTC
From: Radio Geekie Boy
Topic: 296  Message: 296

Hello everyone...

I joined this Yahoo group this morning and would like to introduce myself. I am Barry Siegfried, K2MF, licensed with this call sign since 1977 and continuously since 1964 (formerly WB2NWM). I am a recently retired broadcast engineer with 40-years in radio, 37 of them with WCBS Newsradio 880 in NYC.

In 2011 I got back on the air after an 18-year absence and in 2012 I purchased my first ever Ten-Tec rig, a Jupiter 538, which I really enjoy using. Last night, I heard KC2QMA on 75 meters (nice signal John!) and found my way to this Yahoo group.

I split my time between Florida and New Jersey. Right now, I'm at my summer residence in the hills of northwestern NJ. I am in the process of constructing an amateur radio station in Florida, which I hope to have completed sometime during the fall of 2013.

Although I have a modest station, I do hope to check into the Ten-Tec SSB nets on Sundays, time permitting.

73, de Barry, K2MF >>

Hi Barry. Welcome to the net and the forum. I'm also running a late model Jupiter AT. Glad I bought it. It's just the thing for my fat fingers and tri-focaled eyeballs. Some of the newer rigs are just as bad as cell phones with tiny little buttons and print to match.

Bill AE7KB

Hi Barry, thank you for joining our Group. You are now a member of an elite group of Amateur Radio Operators. I am from NJ originally and now am living in the Metro Atlanta Area.

Feel free to post here anytime. I have created the TEN-TEC Radio Net Group in order for all of the net members to receive updated information about the TEN-TEC 40 meter and 20 meter SSB Nets each Sunday afternoon and also about the TEN-TEC Certificate Program.

Welcome to our TEN-TEC family. Thank you.

Hi Bill,

I am.....plus an Argo V, plus an Omni VII, plus and Orion II, and I can't forget my 6N2(526). Oh....by the way, I have an RX-320D, RX-340 and an RX-350. I guess you might think I like Ten-Tec stuff! ;-)

# 303. TEN-TEC 40 METER & 20 METER NETS TOMORROW (SUNDAY)

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-04-27 10:28:14 UTC
From: John Occhipinti
Topic: 162  Message: 303

The TEN-TEC 40 meter net will be in progress at 19:00 UTC tomorrow (Sunday) on or around 7.261 LSB. Many have been getting on 1 hour earlier to check different TEN-TEC radios, mic settings, audio and general propagation.

The TEN-TEC 20 meter net follows at 20:00 UTC on or around 14.325 USB. I will be using my TEN-TEC Orion II for the first time on the nets tomorrow and I am requesting that everyone who has an Orion II to also use theirs.

I know that many of our net members have several different TEN-TEC radios and we may try to get those to use the same radios for a designated net. Next Sunday May 5th will be Omni VII and we will follow with each week with the Eagle, Jupiter, Paragon, Corsair, Pegasus, Scout or any other TEN-TEC radio.

Thanks and welcome to all of the new members of our TEN-TEC Radio Net Group. Keep in mind that there will be no TEN-TEC nets on Sunday May 19th, as I will be at the Dayton Hamfest working at the TEN-TEC Booth.

Hi all,

"Watersnoodramp" is the Dutch word for "terrible flood". As a boy of 11 years, I very well remember the terrible flood in the Western part of Holland in 1953. I feel lucky that I was able to obtain a book called "Kanaal 3700" (channel 3700) which was the frequency used by Ham operators who provided much of the communications.

The book is a fascinating account of their ten days in action. Through work or otherwise, I have been in many of the locations, towns and villages described in the book. I was born in a small village called "Loosduinen" near the city of The Hague (Den Haag) not far from the North Sea. It was a frightening episode and if the dunes would have been breached by the oceans storm surge, our village would have been flooded too.

A big part of the Netherlands is well below sea level and the last location where we lived, before immigrating to Canada in 1970, the water level would have been up to the eves of the local church. Thousands of people lost their lives and livelihood. The attached file is an excerpt taken from the book and translated into English by Dick Rollema PA0SE.

At the top right of page three is a map where you can find the city of Den Haag in the top left area. We were living just to the South/West of there. It may look that we are a fair distant from the stricken area but it was only about 30 miles from the nearest flooded locations. We where only about 2 miles from the coast of the North Sea. Just to give you an idea of the size of Holland, square mileage wise it fits 32 times in the province of Ontario Canada. It's a nicely condensed article and you may find it an interesting read.

A big part of the Netherlands is well below sea level and the last location where we lived, before immigrating to Canada in 1970, the water level would have been up to the eves of the local church. Close to 2000 people lost their lives and many more lost their livelihood. Large areas of fertile farm land were inundated, and ruined, by salty ocean water. Thousands of life stock drowned in the rising waters too. The attached file is an excerpt taken from the book and translated from Dutch into English by Dick Rollema PA0SE.

At the top right of page three is a map where you can find (in the top left area of the map) the city of Den Haag . We were living just to the South/West of there. Was all set yesterday to check in with the Signal One CX-7 when I caught part of the request for Orions. Copy was pretty rough here too but I did switch to my original Orion for the net. Noticed some guys were giving dial indications so here is mine. My display was indicating 7.261.000 when I had you tuned in best. Interestingly, receive was quieter on the Orion than it had been on the CX-7 but pretty much the same signal strength indications on both. Also thought I heard you asking about audio a couple of times so here is my condx. I use a Heil Classic V at the wide setting and noprocessing, it just plain is not needed on wide but a little is ok on narrow with the Orion.

Also one other comment. I did hear one Paragon user and it sounded like he may have the notorious Loop Board problem which plagued them. His signal was very strong here but I did detect some signal breakup. In the Paragon that has nothing to do with audio distortion and has everything to do with the transformer solder joints on either the major and/or minor Loop Boards. Boards are no longer available but repairs are possible by simply reflowing the solder connections. The Factory may do this for you if you do not feel up to the task. There are some pads that cannot be reached because of a shield on one of those boards and I had to hope that none of those were causing the problem. I redid mine a couple of times over the years and was lucky enough to finally procure one of the last boards from inventory. That board was still performing just fine when I sold the radio and moved up to my Orion.

Will be sure to look you up at Dayton. Until then ....

73 ... Ed, WA9GQK

A very nice shack John. Thank you for showing us your rigs.
I want to stack my Omni VII, my Paragon, and my antenna tuner, but I have not found manufactured enclosures that suit me. Your equipment enclosures interest me. Did you build them?

Thank you for the nice words. What I have are carpeted audio racks, which separates the 2 radios. The Orion II is inside the audio rack and the Omni VII sits on top of the audio rack. I purchased these on line.

I also have several of these carpeted audio racks in my music recording studio, which is located in the same room as my hamshack.

Wow, that sure is some nice looking equipment. If you ever go on vacation and need a house sitter? Please, contact me ..... Just Joking of course! I would probably need the instruction manual to adjust the speaker volume. To this day, the volume knob is all I can get Brenda/KK4CJG to touch on the Paragon. She will however turn every knob on the FT-897D which I have set up memories. It is sometimes amusing to see just how lost she can get sometimes. But, she always finds her way back to the memory presets and her General Class Allocation.

I wanted to let any of the musicians on the Ten Tec Radio Net know that if you are a musician or have a band and would like to record in a professional recording studio in Nashville, TN then this might be for you.

I can TRADE studio time for Ham Radio equipment. I prefer Ten-Tec but am open to anything just let me know what you have. If this is something you are interested in then send me an email and let's set something up.

# 330. TEN-TEC RADIO NET LIVE Audio Feed from Nashville, TN

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-05-05 18:11:00 UTC
From: kc2qma
Topic: 329  Message: 330

TEN-TEC RADIO NET

LIVE Audio Feed from Nashville, TN.

Direct link to Audio feed: http://www.qrz.com/db/KC2QMA
<http://www.qrz.com/db/KC2QMA>

This audio feed will be available every Sunday from Nashville TN
starting at (19:00 UTC 40M) & (20:00 UTC 20M).

*Schedule & conditions permitting.

Go to the Link above and click on the play button in the video window
and after a short advertisement the audio will begin to play. Some delay
of the audio due to internet latency in normal.

(The station in Nashville TN is a Ten Tec Orion II - 75M wire dipole
@75ft flat top. The receiver is typically set to 2.7 to 3.0 Bandwidth
without any DSP or noise reduction. During poor band conditions the
receiver of the Ten Tec Orion II will be adjusted for best intelligible
signal and may have reduced bandwidth and employ some DSP noise
reduction.)

Hope you enjoy and thanks for supporting the Ten Tec SSB NET!

# 331. TEN-TEC 40 METER & 20 METER NET RESULTS SUNDAY MAY 5, 2013

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-05-07 00:30:40 UTC
From: John Occhipinti
Topic: 331  Message: 331

The TEN-TEC 40 meter net was well under way at 18:00 UTC on 7.271, as many of our net members wanted to check out their various TEN-TEC radios. The net officially started at the regular time of 19:00 UTC with 75 people checking in.

The TEN-TEC 20 meter net followed at 20:00 UTC on 14.325 with 48 people checking in.

Congratulations to the 7 new 10 Checkin Certificate winners:

1.KI8DU Roger in WV
2.W9CMD Dave in IN
3.K4NSZ Madison in FL
4.K2BLC Lee in NJ
5.W3LI Andy in PA
6.W2DD George In NJ
7.WX4QN Bobby in TN

We also had 13 first time checkins on the nets and a total of 604 different people have checked into the nets since the TEN-TEC Certificate Program started on January 20, 2013.

Thanks to John KC2QMA in Nashville, TN for streaming the live audio over the internet during both nets. Also thanks to Lloyd N2KPC in Trenton, NJ for his great work as the Official Relay Station for the TEN-TEC 40 and 20 meter nets.

Remember that Lloyd and myself will be at the Dayton Hamvention, working along with the rest of the TEN-TEC team at the TEN-TEC Booth, and there will be no TEN-TEC nets on Sunday May 19th.

I will be posting the new Certificate Data Base in the FILES section in a few minutes. Please check your names and call signs for accuracy. Thanks to all of our net members and I really do appreciate your support.

The TEN-TEC 40 meter net will start tomorrow (Sunday) at 19:00 UTC (3PM Eastern Time) on 7.261 and the TEN-TEC 20 meter net will follow at 20:00 UTC on 14.325.

Many have been getting on the 40 meter net an hour earlier at 18:00 UTC to check out their various TEN-TEC radios, mic/menu settings, propagation and to discuss any concerns they may have about any TEN-TEC product.

As usual, John KC2QMA, Nashville, TN will be streaming the live audio over the internet during both nets. Just go to QRZ and enter KC2QMA and click on the link.

Keep in mind that Lloyd N2KPC and I will be at the Dayton Hamvention next weekend, working at the TEN-TEC Booth with the rest of the TEN-TEC team and there will not be any nets next Sunday May 19th. Thank you.

First, I am really looking forward to the Ten_Tec Net tomorrow. I had to miss the last couple of weeks. SORRY!
My question/request today is to ask those folks using the Paragon 585 and the Model 705 Microphone, where do you normally set your Microphone Gain? I find that the 9 o clock position seems to work best. I would like to have the Loudest Audio and still run a Very Clean Station. Most folks tell me that I can get away with the 10 o clock position but, others say that this setting is just on the verge of being too much. I am usually arms length from the Microphone. Any and all feed back is appreciated. Also, does anyone know of an adjustment for the Clock on the Paragon. The manual is very sparse with information about the clock. Mine loses about 20 seconds a week. I find this unacceptable and would like to make it more accurate. Thanks to All!

Wade, I will strongly suggest that you move your mic closer to your lips. A good rule of thumb is to have your mic around 3 inches from your lips and speak in a normal voice as if you were speaking to your wife across the breakfest table.

This will allow you to run the mic gain at a lower level while still giving you the articulation and voice projection that you need to be heard. It will also eliminate any background noise from the room, such as fans, linear amp noise or harmonics from unexpected persons.

This advice comes from over 50 years experience in radio broadcasting and in the music studio. Thank you.

I also have a Paragon and the 705 mic. I have the mic gain set at 9:00 and no processing, but I speak a lot closer to the microphone...inches away. It seems to work well ther, I get lots of nice comments on the audio.

Wade,
The 705, as you probably know, is an electret condenser microphone. It either runs off a 9v battery in the base or gets its power from the mic connector. It sounds to me that you have the mic gain set correctly, for the most part. With this mic, I would expand on what John said to say 3-6 inches from the foam windscreen. And then likely just shy of the 9 oclock position should be close. In these radios, as the manual states, you have to watch the ALC light to set the mic gain. I've found the advise from Ten Tec, and the manuals to be spot on. Just advance the gain to where the ALC light flashes on voice peaks. If its on all the time while you are speaking, that's into an overdrive situation. When using the speech processor, Its a touchy setup, as you still want the ALC light to just begin to flash, but it will, flash more consistantly due to the processor. Another way to set the mic gain correctly when using a processor is to watch your transmission on a peak reading wattmeter. Say, for example on a 100w rig, you would want to see the output up to 70-80 watts most of the time and only occasionally past that point. That's my rule of thumb with the older ten tec rigs. The 705 is an excellent microphone. Great communications grade audio.

One last comment, some of the Omni V/Paragons and early Omni VI rigs have been modified for increased mic gain. Sometimes done at the factory, by request, or done by the owner. This was done to accommodate the lower output heil mics that have become popular. If yours has had the mod, using a 705 mic is going to be even more touchy to set. The 705 is a very high output mic. By touchy, I mean very little rotation in the mic gain knob, say to 8 oclock, or thereabouts. Just watch the ALC light.

I do not have any information on the clock. Maybe someone else can chime in, or simply as the question when its your turn on the net this afternoon.

Good luck,
Dave

The 705 is a great mic, but it does have a lot of bass presence and the high frequency (energy) roll off is about that of a human ear.... -6 dB per octave. Its great for rag chew and local nets but needs some processing or help from a linear amplifier to help get the thin highs through in marginal or DX conditions.

From: John Occhipinti
Topic: 337  Message: 340

John, thank you for the nice comments. I created the TEN-TEC Radio Net Yahoo Group to include all TEN-TEC users who have a variety of TEN-TEC radios. Some of the other TEN-TEC Groups have specified a specific TEN-TEC radio and some may feel that their particular TEN-TEC radio does not fit in.

We accept all TEN-TEC users and those interested in TEN-TEC products to participate in the TEN-TEC nets and also to join the TEN-TEC Radio Net Group.

I have encouraged members of the other TEN-TEC Groups to join us, as we surely can use the vast amount of experience that many of them have with TEN-TEC radios.

We will continue tp operate the TEN-TEC nets in a friendly manner and will always acknowledge and check in others who do not presently have a TEN-TEC radio.

John, thank you very much for streaming the live audio over the internet during both nets. For those who want to hear the nets live over the internet, just go to QRZ and type in KC2QMA and click on the link.

John, I see that 7.261 is clear, so we will be on at 18:00 UTC (2 PM Eastern) for the pre-net rag chew and to check our radios and propagation. Thank you.

TEN TEC Radio Net continues to grow!
I think it's great that in the short time that the (John K3UR) has put up the new yahoo group as of now we have 141 members who have joined and we are even getting net check-ins from around from other Ten Tec Users.
I just want to say this net has some of the friendliest and helpful people I have met and am proud to be a member of the Ten Tec community and Yahoo Group.
I have owned my ORION II for over a year now and it still amazes me!
Anyway I just wanted to share my thoughts with the group.

# 342. TEN-TEC 40 METER & 20 METER NET RESULTS FOR SUNDAY MAY 12, 2013

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-05-13 02:37:51 UTC
From: John Occhipinti
Topic: 342  Message: 342

The TEN-TEC 40 meter warmup net was under way at 18:00 UTC on 7.261, with a lot of question and answer exchanges about various TEN-TEC radios. The 40 meter net officially started at 19:00 UTC with 71 people checking in.

The TEN-TEC 20 meter net followed at 20:00 UTC on 14.323 with very poor band conditions and also 2 different QSO's were taking place on each side of our operating frequency. Coupled together with Mother's Day activities, we still were able to checkin 35 people.

Congratulations to the 2 new 10 Checkin Certificate winners:

1.N8RZO Ken MI
2.WA3DX Earl NJ

We also had 16 new first time checkins to the nets. I had a pleasant surprise, as a dear old friend of mine, ZF1DG, Durl, checked into the 20 meter net from his home in the Grand Caaman Islands.

Thanks to Lloyd N2KPC in NJ for doing his usual good job as the Official
Relay Station for the TEN-TEC nets and also to John KC2QMA in TN for streaming the live audio over the internet during both nets.

Remember that there will not be any TEN-TEC nets next Sunday May 19th, as Lloyd N2KPC and I will be at the Dayton Hamvention, working at the TEN-TEC Booth along with the rest of the TEN-TEC Officials and TEN-TEC Ambassadors.

I will post the new Certificate Data Base in the FILES section. Thank you and have a safe and blessed week.

I have just been informed that several other TEC-TEC Ambassadors will also be working at the TEN-TEC Booth at the Dayton Hamvention. This was brought to my attention by David Drake, W9CMD.

It looks like the TEN-TEC Booth will be well staffed, in order to assist the multitude of people that will visit the TEN-TEC Booth.

If any other of our TEN-TEC NET members will be working at the TEN-TEC Booth please let me know and I will post it here. Thank you.

John,
You may wish to post on the site that several of the TT Ambassadors will be assisting the sales and technical personnel at the TT booth at Dayton on Friday and Saturday. Those same folks are fairly regular on the sunday net. I'll be helping on Friday from 1-3pm. I don't have a list of those helping/working, but maybe Stan would give that to you to post? It would be nice to put a face to a call or name for many of the checkins to the nets. Also shows the dedication to the TT product that many of us share. The ambassador program is explained on the TT website. I signed up a couple years ago. I have great respect for the TT staff and their employee's.
Thanks,
Dave Drake

Hey John,

You did a great job running the net especially on 20 meters Sunday. It was a tough situation as there was QRM bot above and below your frequency not to mention poor propagation.

Guess I'll have to wait 2 weeks to hit my 25th. check-in. ;-)

Unfortunately, due to a health situation, I won't be there at Dayton. My regards to all the net members and the terrific folks at Ten-Tec.

73,
Bill/K1FPV

# 349. Fwd: [TenTec] N4PY at Dayton

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-05-14 13:41:24 UTC
From: John Occhipinti
Topic: 349  Message: 349

I am forwarding an email from Carl Moreschi, N4PY, that he also will be at Dayton in Booth 227. Carl has provided his special software for many of the
TEN-TEC Radios.

Also, I have just been informed by Jim Wharton NO4A, Vice President TEN-TEC Inc, that the certificates have been mailed to the new winners.

My wife Rose and I will be traveling to Dayton on Thursday and I will be posting updates on the activities at the Dayton Hamvention.

Have a safe and blessed week.

John, K3UR
Net Control, TEN-TEC Nets

I will be at Dayton in Booth 227.

I offer control software for the Tentec Pegasus, Jupiter, Omni VII,
Orion, Orion II, Eagle, Argonaut V, Argonaut VI, RX320, RX331, RX340,
and RX350.

Please stop by and say hello.

# 350. TEN TEC Radio Net Round Table Net Saturday may 18th 12Pm Central.

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-05-15 11:13:51 UTC
From: kc2qma
Topic: 350  Message: 350

TEN TEC Radio Net Round Table Net.

I was thinking of having an "Informal" round table net Saturday May 18th at 12PM Central on 40 Meters 7.261 for those of us who could not make it to the Dayton Hamvertion.

This will not be a Directed Net just a free form round table and will be a great time for all to share info and stories about their Favorite Ten Tec products, Tips, Tricks and anything that might be fun for the net.

I will also be steaming the net audio online of the net for people who would like to hear what their audio sounds like from Nashville, TN.

If the TEN TEC booth gets some kind of antenna at the Dayton Hamvention maybe they can tune into the net and listen in to the fun!

The Direct link to the Audio Stream is: http://www.qrz.com/db/KC2QMA <http://www.qrz.com/db/KC2QMA> . Just click on the blue circle with the arrow and the audio will start playing after a short advertisement.

John K3UR & Lloyd N2KPC will be working the Ten Tec Booth at the Dayton Hamvention and may check into the net.

This net will NOT count towards the Ten Tec Certificate program.

# 352. New poll for ten_tec_radio_net

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-05-15 11:33:10 UTC
From: ten_tec_radio_net@yahoogroups.com
Topic: 351  Message: 352

Enter your vote today! A new poll has been created for the
ten_tec_radio_net group:

Will you join us for the Saturday may 18th round table net?
(This will NOT count for the certificate program)

o YES
o NO

To vote, please visit the following web page:
http://groups.yahoo.com/group/ten_tec_radio_net/surveys?id=2460818

Note: Please do not reply to this message. Poll votes are
not collected via email. To vote, you must go to the Yahoo! Groups
web site listed above.

Thanks!

# 355. HIGH PERFORMANCE SUB-RECEIVER FOR TEN-TEC ORION TRANSCEIVERS

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-05-15 20:27:26 UTC
From: John Occhipinti
Topic: 355  Message: 355

For those TEN-TEC Orion owners who do not receive the QST magazine, I am forwarding this announcement that is in the new June issue of QST on page 62, which reads:

"HIGH PERFORMANCE SUB-RECEIVER FOR TEN-TEC ORION TRANSCEIVERS"

Model RX366 is a high performance sub-receiver for the Orion Model 565 and Orion II Model 566. This is a new contest grade second receiver for the Orion series of transceivers. The new second receiver module uses ASR (Advanced Signal Reception) technology that is already used in the TEN-TEC Eagle transceiver. The RX366 requires V3 Orion 565 and Orion II 566 firmware. With V3 and the RX366 installed, the Orion sub- receiver performance is said to be greatly improved over the original sub-receiver in terms of immunity to interference from adjacent strong signals and immunity to overload from very strong signals present on the band. Price: $639 (one 2.4 kHz filter included). For more information, or to order, visit www.tentec.com.

I will see many of you at the Dayton Hamvention, as I will be working at the TEN-TEC Booth with the other TEN-TEC Ambassadors and TEN-TEC Staff. Thank you.

Hello John,
The RX366 receiver board has been available for about 2 years now and is a pretty sweet add on for Orion owners. Besides the incredible performance of the RX366 one feature the many people like is the built in 9 MHz output for use with an optional High speed Pan adapter like the LP-Pan.

I hope you and the Ten Tec team have a great time at Dayton, wish I could be there! I will be on 7.261 Saturday the 18th at 12Pm central hosting the Ten Tec Net Round table and it should be fun. If you have any time during the net give me a call at my QTH and I will phone patch you into the net to say hello from Dayton.

John, I am wondering why QST has the RX366 listed under, NEW PRODUCTS in the June 2013 QST that I received today?

Do you have this installed in your Orion II? Also, send me your phone number and I will try to call you during your TEN-TEC Round Table Net on Saturday at 12PM Central time.

I am leaving for Dayton early tomorrow morning (Thursday). Thank you for all of your help on the TEN-TEC nets.

I believe the RX-366 was released sometime early 2012? Maybe QST is just re running the original add from when Ten Tec put the RX-366 out?

I don't have the RX-366 in my Orion II as of now because I'm not really a contester and I feel it might be overkill for my casual operation. But I may add the RX-366 someday because it does make diversity reception even better witch I do from time to time.

I will email you with my number later.

Subject: [TenTec] New Rig At Dayton

What is also so great about this rig, you don't have to be an arduino
programmer to enjoy it.
Nope, on it's own, It's a great 40/20 meter CW QRP rig on it's own.
Will be < $200 bucks. (I don't have the price sheet with me, they are all
at Dayton right now, but I am 99% sure it is $199, so don't quote me until
the price sheets are public at Dayton).
Current draw in rx and tx meets other qrp rigs on the market.
A couple of beta testers have stated that this will now be their main
backpacking QRP rig when they go out to the mountains.

non programmers will be able to use it as is.
non programmers will be able to see what the computer whizzes have come up
with, try it out, and get just about any feature implemented they want.
Comes with volume level control, sidetone level control, bandwidth control,
step size control, RIT control, and up to 3 user definable functions. A
developer may find a way with the buttons on it to give it more functions
than the way we have done it, it is only limited by imagination. A user may
do the extra programming to put one of the UI shields that has a dozen
buttons and a dozen pots, then there is no limit on where this unit can
grow. This pic chip CPU has more RAM and ROM than the Eagle does, and is
MUCH faster. BUT, it is a LOT cheaper too, the 32 bit series pic chips are
phenomenally superior to the existing pic chips used by everyone to date.
That is the beauty of this direction, the only limit to it's functionality
is the hardware shield itself, limited to it's crystal filtering, limited
to it's size of pic chip, which by the way we are only using 1/1000th of
the programming capability of the chip.
Heck, there are display shields already on the market that the code in the

production unit will drive. So, if you want a display, $10, and it is already working.
There are shields that can be added to add audio featuring, already on the market.
There are shields that can add.... well, the sky is the limit.
To steal a slogan.... This is one of the latest shapes of things to come in a long line of new and exciting TEN-TEC products.

The concept, using the chipKIT UNO32 (a 32 bit microprocessor with a HUGE RAM/ROM that isn't even scratched), and you plug a standard "Shield" into it.
Then, you want more functions, plug another shield into that shield, you want more, it will drive as many shields as you want.
Now, of course, we left room for one additional shield in the current box. However, we will make boxes down the road that will accommodate more shields.

The code and the hardware design are ALL OPEN SOURCE.... Meaning anyone can download the code, the schematics, the layouts, and change it to whatever they want. They are protected under the GNU GPL Open Source license for Software and the TAPR Open Hardware License for hardware. All that means is, make all the changes you want, have fun, if you make it public,then TEN-TEC gets those changes and can decide to include them in future products at TEN-TEC's discretion.

For the tinkerer, they will probably take the top off, leave it off, and add however many shields they want.

For the educator, they will (and yes, I have teachers in as low as the 3rd grade who already use raspberry pi's or arduinos in classrooms), that want to get these to help teach kids the concepts of radio and even teach them Morse Code. Imagine, teaching kids in early school days the concepts of radio and Morse Code.... that just fuels the market from early school age for the amateur community..... Voice mode shields will come if this really takes off, so will combined voice/CW, etc.

We are very excited and hope it brings a lot of new hams into the amateur market.

We don't know of any other product other than maybe a xilinx based SDR that beckons software developers into the amateur market as much as this product like this.

And we will be the first in production with this unit.

This product is the brain child of Jim Wharton NO4A, and developed (current hardware and initial production software) by William E Curb III WA4CDM, with inputs and RF direction from Jack Burchfield, President/Owner/first employee of TEN-TEC other than Al Khan himself. I helped a very very small amount, Sales helped with a lot of the featuring, service beta tested, Jim Wharton beta tested, etc. A lot of assisted help in the building, but mainly the brain child of Jim Wharton and creation by Bill Curb.

Can you say.... John Henry is excited?
Darned tootin I am.

And if this product wasn't enough, we are also introducing a new SMART MEMORY auto tuner this year at Dayton.
It can work with the 539 or 599.
Pump out 4-20 watts or so into the auto tuner, hit TUNE, and the algorithm it uses to find a match is phenomenally fast and accurate. Will tune 10:1 in almost all 160-10m antenna conditions. This product was requested by one of our service engineers for years, and designed and built 100% by one of our esteemed electrical engineers.

TEN-TEC isn't sleeping, we are bringing exciting new products to the market at Dayton, and will continue to do so again later this year.

Neither of these two products took me away from working on existing products, I have a new release for the 539 that I will release next week that gives features customers have requested, and am currently working on an update for the 588. We have changes in progress for a FUTURE firmware update for the Orion 565, it just don't get better than TEN-TEC.

ok, back to bed, gotta get ready for Dayton
Y'all take care,
John Henry, KI4JPL
TEN-TEC Engineering

OK Sounds good I hope conditions are good for us to make HF contact tomorrow. I will send you my phone number later. I bet after some of the operators get a chance to use the Omni VII's they will want to buy one for their shack's!

Hope you are having a great time I wish I could be there!

From: kc2qma
Topic: 363  Message: 363

TEN TEC Radio Net Round Table Net.

I was thinking of having an "Informal" round table net Saturday May 18th and Sunday the 19th at 12PM Central on 40 Meters 7.261 for those of us who could not make it to the Dayton Hamvertion.

This will not be a Directed Net just a free form round table and will be a great time for all to share info and stories about their Favorite Ten Tec products, Tips, Tricks and anything that might be fun for the net.

I will also be steaming the net online of the net for people who would like to hear what their Audio sounds like from Nashville, TN. If the TEN TEC booth gets some kind of antenna at the Dayton Hamvention maybe they can tune into the net and listen in to the fun!

The Direct link to the Audio Stream is: http://www.qrz.com/db/KC2QMA <http://www.qrz.com/db/KC2QMA> . Just click on the blue circle with the arrow and the audio will start playing after a short advertisement.

John K3UR & Lloyd N2KPC will be working the Ten Tec Booth at the Dayton Hamvention and may check into the net.

This net will NOT count towards the Ten Tec Certificate program.

I want to touch base with the members of the TEN-TEC SSB Nets and let you know that I had a great time at the Dayton Hamvention. As a TEN-TEC Ambassador, I had the priviledge of working at the TEN-TEC Booth with members of the TEN-TEC Company; Jim Wharton NO4A, Vice President, Stan Brock WD0BGS, Sales Manager, John Henry KJ4JPL, Engineering, Jerry Whaley KK4LVC, Sheet Metal Specialist and Bill Curb WA4CDM, Engineering.

TEN-TEC Ambassadors also working the TEN-TEC Booth were Lloyd N2KPC, ED AB4IQ and several others who I cannot recall their names. Please post your names and call signs here if you also worked the TEN-TEC Booth. I am sorry that I cannot remember your names.

Orion II Update: I just connected a jumper cable that has the 8 pin female mic plug on one end into the AUX I/O jack in the back of the Orion II. As a musician and audiophile, I am taking advantage of this option to get broadcast quality audio from the Orion II. This option is discussed in the Orion II Manual on pages 27 and 28.

Let me be very clear....this type of operation is not for everyone and the ones that are truly interested in well rounded quality audio can contact me for all of the menu settings. It took me several hours and using the ATTACHMENT audio graph from SpectraPlus to get all of the menus set to take advantage of this option from TEN-TEC and I am more than happy to share them with members of our TEN-TEC net and TEN-TEC Radio Net Group.

I previously used this option with an Icom 756 PRO III, Kenwood 850, Kenwood 870, Kenwood 590, Yaesu FT-2000 and Yaesu FTdx5000MP.

For those who have worked in radio, TV broadcasting or in the music studio, check the audio graph ATTACHMENT of my audio setup using the AUX I/O instead of the front mic plug on the Orion II.

I have been the Official Setup Specialist for all of the W2IHY Audio Gear for many years and it was great to see my friend Julius Jones W2IHY at the Dayton Hamvention again.

Hi Oz, I had to assist the Special Event Station on several occasions with the 2 Omni VII radios they were using. I also made a few visits to see my friends Julius Jones W2IHY and Bob Heil, K9EID.

Jim Wharton told me that someone was looking for me, but he did not remember your name. You should have come back to the TEN-TEC booth again. Take care and I'll talk to you on Sunday.

Thank you John,

I also assisted Stan at the TT booth on Friday, and introduced myself to you. Sorry you forgot my name and call. I was the tall guy in the blue shirt, Ten Tec badge. That I'm sure you remember.

As I said in an earlier post, I have great respect for all the Ten Tec Staff and employee's. Its a great U.S. manufacturing organization. I started using TT gear in the mid 1980's after RL Drake closed its doors to ham radio. I'm always happy to help them in any way I can. I ask nothing in return.

From my discussions with John Henry, I'm exited by all the new ideas and gear that they are considering in the coming years. I think the open source QRP rig they introduced at Dayton is only the beginning of more great state of the art products.

If any of you attended the Drake radio forum on Saturday morning, I intend to attempt to duplicate the issues Rob Sherwood presented with respect to most all new dsp radios. The issue is a "de-sensing" or suppression of CW signals when the rig is presented with short pulse type interference (electric fence). He used an Omni VII as an example. According to Rob, the AGC circuit needs to be modified in order to eliminate this problem. I didn't want to step in to the discussion without more facts, hence the experiment. Rob made no mention of the effect of using the noise blanker. If any of you are aware of this issue, as presented by Rob, please reply to me directly at dave.drake@.... I'll post my results here when finished.

Hello Paul, last weeks round table was a lot of fun even though the band conditions were not so good and I want to that everyone who did join us. I did the net just for fun since I could not make Dayton and had the weekend off. Looks like this weekend John (K3UR) will be having the normal Sunday net and an another net on Monday as well.

BTW I will be ordering all the parts to do the IF mod soon and look forward to it. I also just ordered a new LP-100A SWR/Watt meter from Larry last week and look forward to getting it into the shack!

# 376. TEN-TEC SPECIAL MEMORIAL DAY WEEKEND NETS ON SUNDAY AND MONDAY

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-05-24 23:18:06 UTC
From: John Occhipinti
Topic: 376  Message: 376

This Memorial Day Weekend gives everyone a chance to get together to chat and also to receive credits toward your TEN-TEC Certificates.

The regular Sunday afternoon TEN-TEC 40 meter net will be in progress at 19:00 UTC (3PM Eastern Time) on 7.261 and the 20 meter net will follow at 20:00 UTC (4PM Eastern Time) on 14.325.

There will be a SPECIAL MEMORIAL DAY TEN-TEC NET on Monday May 27th at 19:00 UTC (3PM Eastern, 2PM Central) on 7.261. Everyone that checks into the Memorial Day Net will receive credit for 2 checkins. To be fair to everyone, I am asking for multiple relay stations to pick up anyone calling into the net that I cannot hear. All bonafide relays will also be awarded credit for 2 checkins. This is an opportunity for many to pick up 4 checkin credits this weekend, by checking into the 40 meter and 20 meter nets on Sunday and for checking into the Memorial Day Net on Monday!

NOW FOR THE EXCITING NEWS! While I was assisting at the TEN-TEC Booth at the Dayton Hamvention last weekend, Jim Wharton NO4A, Vice President, TEN-TEC Inc., spoke to me concerning an added gift for those who reach the 50 checkin total. Jim showed me several things that he is working on and you truly will be surprised and happy with the gift that will accompany your TEN-TEC Gold Certificate.

I will be elaborating more on this as some of our net members approach the 50 checkin total. Yes, TEN-TEC really cares about their loyal customers and they want to recognize them for this. Let me add that I also care about all of our net members and appreciate all the support you have given me. Thanks a million!

# 377. MEMORIAL DAY WEEKEND NETS ON SUNDAY AND MONDAY

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-05-25 10:33:17 UTC
From: John Occhipinti
Topic: 377  Message: 377

This Memorial Day Weekend gives everyone a chance to get together and also to receive up to a total of 4 credits toward your TEN-TEC Certificates, if you check into both nets on Sunday and also the Special Memorial Day Net on Monday.

The regular Sunday afternoon TEN-TEC 40 meter net will be in progress at 19:00 UTC (3PM Eastern Time) on 7.261 and the 20 meter net will follow at 20:00 UTC (4PM Eastern Time) on 14.325.

There will be a SPECIAL MEMORIAL DAY TEN-TEC NET on Monday May 27th at 19:00 UTC (3PM Eastern, 2PM Central) on 7.261. Everyone that checks into the Memorial Day Net will receive credit for 2 checkins. To be fair to everyone, I am asking for multiple relay stations to pick up anyone calling into the net that I cannot hear. All bonafide relays will also be awarded credit for 2 checkins.

This is an opportunity for many to pick up 4 checkin credits this weekend, by checking into the 40 meter and 20 meter nets on Sunday (2 credits) and for also checking into the Memorial Day Net on Monday (2 more credits) = 4 credits toward your certificates!

NOW FOR THE EXCITING NEWS!

While I was assisting at the TEN-TEC Booth at the Dayton Hamvention last weekend, Jim Wharton NO4A, Vice President, TEN-TEC Inc., spoke to me concerning an added gift for those who reach the 50 checkin total. Jim showed me several things that he is working on and you truly will be surprised and happy with the gift that will accompany your TEN-TEC Gold Certificate.

I will be elaborating more on this as some of our net members approach the 50 checkin total. Yes, TEN-TEC really cares about their loyal customers and they want to recognize them for this. Let me add that I also care about all of our net members and appreciate all the support you have given me. Thanks a million!

# 381. HAPPY MEMORIAL DAY

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-05-27 12:00:35 UTC
From: John Occhipinti
Topic: 381  Message: 381

Happy Memorial Day to all of our TEN-TEC net members! Remember, that we will be having a SPECIAL MEMORIAL DAY NET today at 19:00 UTC (3PM Eastern, 2PM Central) on 7.261. As I previously promised, I will be awarding each person that checks into the net today with 2 checkin credits!

Yesterday was a banner day for the TEN-TEC 40 meter net at 19:00 UTC on 7.261, as we had 97 people check into the net. The 20 meter net followed at 20:00 UTC on 14.325 and we had 78 people check into this net.

I will be updating the TEN-TEC Certificate Data Base today and will announce the new winners after the Special Memorail Day Net today.

A big thank you to Lloyd N2KCP for his wonderful work as the Official Relay Station for the TEN-TEC nets and also to John KC2QMA for his efforts in streaming the live audio over the internet during both TEN-TEC nets. The great efforts of these 2 gentlemen are done week after week and I really do appreciate all of their efforts.

A great big thank you to each and everyone that has supported me the past 14 months as Net Control and for all 146 people that have joined the TEN-TEC Radio Net Group.

http://groups.yahoo.com/group/ten_tec_radio_net/

I want to encourage others to join our group, including many of the Certificate winners.

Have a great day today and I will talk to you this afternoon on the SPECIAL MEMORIAL DAY NET at 19:00 UTC (3PM Eastern, 2 PM Central on 7.261. Thanks again for all of your support for TEN-TEC Inc. and to the TEN-TEC nets.

# 384. TEN-TEC NET RESULTS FOR SUNDAY & MONDAY NETS

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-05-28 00:43:00 UTC
From: John Occhipinti
Topic: 384  Message: 384

This has been a wonderful and blessed weekend for the TEN-TEC Nets. Yesterday (Sunday) was our regular nets. The TEN-TEC 40 meter net was under way on 7.261 at 18:00 UTC, 1 hour before net time and we had 97 people check into this net.

The TEN-TEC 20 meter net followed at 20:00 UTC on 14.325 and we had 78 people check into this net.

I announced a SPECIAL TEN-TEC MEMORIAL DAY NET and promised everyone that checked into this SPECIAL NET, that they would receive credit for 2 checkins. This SPECIAL TEN-TEC MEMORIAL DAY NET started at 18:00 UTC on 7.261 and we had 92 people check into this net!

Congratulations to these 8 new winners of the TEN-TEC 10 Checkin Certificate:

1.K8FER Fred WV
2.KB2YOA Gaye NJ (Lloyd N2KPC's wife)
3.KC4DYM Ray GA
4.WA4JJY Eddie TN
5.WA4GQG Kevin NC
6.WE0D Greg FL
7.K4SWE Steve TN
8.KC2TKD Frank NJ

Congratulations to these 7 new winners of the TEN-TEC 25 Checkin Silver Certificate:

1.K1FPV Bill MA
2.K3GDX Frank NJ
3.WD8DFO Leo MI
4.WG0G Paul WI
5.WB4QDA John TN
6.N8TJE Ted OH
7.KF4AM Bob SC

We had 44 new people check into the nets on Sunday and 15 new people checked into the MEMORIAL DAY NET on Monday.

A total of 683 different people have checked into the TEN-TEC nets since January 20, 2013, when the Certificate program started!

A big thank you to the new members who joined the TEN-TEC Radio Net Group this week http://groups.yahoo.com/group/ten_tec_radio_net/

I also want to recognize 2 of my right hand guys, Lloyd N2KPC, the Official Relay Station for the TEN-TEC Nets and also to John KC2QMA, for streaming the live audio over the internet during each of the TEN-TEC Nets. A special thanks also to John KC2QMA, for conducting a TEN-TEC Round Table Net last Saturday on 7.261, while Lloyd and I were at the Dayton Hamvention, working at the TEN-TEC Booth with members of the TEN-TEC Company.

Thank you for all of your support and a big thanks to Jim Wharton NO4A for his great support for the TEN-TEC Nets and TEN-TEC Radio Net Group. Have a safe and blessed week. I will post the new Certificate Data Base in the FILES section following this posting.

Oz, thank you for bringing this to my attention. This is the reason why I post the Data Base each week, as band conditions will make us copy certain letters incorrectly. I have encouraged everyone to check the Data Base each week.

I will make the correction and Kelly KI4RND in KY will be credited with 10 total checkins and is entitled to his 10 Checkin Certificate. I am forwarding this to Jim Wharton right now.

"THE TEN-TEC RADIO NET", by John Occhipinti, K3UR

The TEN-TEC Radio Net, is where elite hams congregate,
exchanging useful information, these folks are really great;
many different TEN-TEC radios, are represented here,
Orion, Omni and the Eagle, along with Paragon and Corsair;
Jupiter, Pegasus and Argonaut, still hearing them on the air,
these people love their TEN-TEC's, we hear them everywhere;
the TEN-TEC Radio Net, with Delta and the Triton 4,
Centurian amps and various mics, they give us so much more;
we extend a great big welcome, to join the TEN-TEC Radio Net,
you'll surely be appreciated, and happy that we have met!

In case you didn't know it, I also am a poet! Thank you for taking the time to read my little poem.

I had to go out of town and may be back home tonight. I will work on the CERTIFICATE DATA BASE when I return home.

Check the attachment: This a picture of me at the TEN-TEC Booth, at the Dayton Hamvention, with my hand on the Orion II.

Also, there will be a TEN-TEC Round Table Gathering this Wednesday at 19:00 UTC (3 PM EASTERN, 2 PM CENTRAL) on 7.261. This will be an informal get together to check out radios, mics, antennas and to share any information about any TEN-TEC product.

I now have my Handy Dandy Cell Phone set to Alarm on Sundays, at the appointed time. That is about the only use it gets. I never answer the assorted family members wanting to borrow something, and Ex-wives who still care ( when they need something ) Brenda/KK4CJG and I do most communications via 2 meter simplex. She with the 50 watt Yaesu FT-1500 and me with a good antenna and the FT-897D. Local 2 meter coverage here is better than the Cell Phone anyway. I could sell the FT-897D except for the fact it does 2 meter/70 Cm ... About once every 6 months or so, we still check the 897D to make sure it still works on HF! Yes, the Yaesu is a pretty good HF Rig but, the Paragon just runs rings around it on Transmit and Receive. This is my way of saying... Sorry I Missed the Net folks.!!!!!!!

2 Paragons
1 Corsair
1 Omni D/c
And, I will have Lots of the NEW Ten Tec Gear as soon as my Rich Uncle gets out of the Poor House! 73 to all... KJ4WS ...

# 398. TEN-TEC 40 METER & 20 METER NET RESULTS FOR JUNE 2, 2013

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-06-04 02:02:50 UTC
From: John Occhipinti
Topic: 398  Message: 398
Attachments: 1 described; binary payloads are missing from this source WARC

The TEN-TEC 40 meter warmup session started at 18:00 UTC on 7.261 and the 40 meter SSB net officially started at 19:00 UTC with 75 people checking in. The TEN-TEC 20 meter net followed at 20:00 UTC on 14.326 with 53 people checking in.

We were in the middle of a huge thunder storm during both nets, but were able to check in many stations with the help from Lloyd N2KPC in NJ during both nets and the help from Barry N1EU in NY State on the 20 meter net.

John, KC2QMA was still able to stream the live audio over the internet during both nets. I want to thank everyone for their support.

Congratulations to the 3 new 10 Checkin Certificate winners:

1.KA9NVZ Pat IN
2.KD4HJT Ray SC
3.K0SX Steve CO

I have attached the picture of my Orion II and Omni VII, which I now have in separate carpeted audio racks. This picture was recently put on the TEN-TEC Radio Net Group http://groups.yahoo.com/group/ten_tec_radio_net/

I will be posting the new Certificate Data Base in the FILES section. Thanks again for all of your support for the TEN-TEC nets.

Remember, we will be having a special TEN-TEC Round Table get together this Wednesday June 5th at 19:00 UTC (3PM Eastern, 2PM Central) on 7.261. We will be checking different radios, mics, antennas and sharing any important information with the group.

# 400. TEN-TEC ROUND TABLE NET

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-06-04 21:10:51 UTC
From: John Occhipinti
Topic: 400  Message: 400

There will be a special gathering of the TEN-TEC NET members tomorrow June 5th at 19:00 UTC (3 PM Eastern, 2 PM Central) on 7.261.

This will be an opportunity for checking radios, mics, antennas and to discuss anything related to TEN-TEC products.

I will talk to you tomorrow.

John, K3UR
Net Control, TEN-TEC Nets

Hi John, it was good to hear that you will be streaming the audio tomorrow during the RAG Chew Net. Are you planning on participating? I have just put up a new 40 meter Inverted V Diplole and will be using it during the net tomorrow. I also will be using my Omni VII.

I hope to hear you tomorrow.

Yes, I will be on the net as well and will post the link for the Audio stream later today.

There is a new picture of my latest shack setup in the photos section.

I just added a new LP-100A Watt/SWR meter to the shack last week and am very happy with it. Now I know exactly how much power I am putting out! :)

John and Andy, thank you for the responses. I am looking forward to talking to many of our TEN-TEC Radio Net Group and net members. I will be on earlier than the 19:00 UTC time to make some adjustments to my new setup.

As I stated, I just put up a new 40 Meter Dipole with the W2DU Current Balun. The #14 AWG FlexWeave is covered with black UV resistant covering. The SWR is 1:1 on 7.261 and from the top end to the bottom end of the 40 meter band the SWR is 1:9 at its highest reading. I have it set up in an Inverted V configuration.

After I put it up last night, I talked to many stations in NY, KY, AL, FL, SC, OH and TN and had excellent signal and audio reports.

Depending on the reports I get today, I may have to move it to a more advantageous place, in order to hear most of the people who check in from various locations.

# 407. TEN-TEC 40 METER RAG CHEW NET

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-06-05 23:48:55 UTC
From: John Occhipinti
Topic: 407  Message: 407

We had a special TEN-TEC 40 meter Rag Chew Net today (Wednesday) at 18:00 UTC (3PM Eastern, 2PM Central) on 7.261.

We had 24 people check in and most of the 2 hours consisted of various people checking out their different radios, mics and antennas. There were also recordings and playbacks during the net, as people were asking how their audio sounds.

A new checkin KO4CH Jerry in NC, checked in and had already recorded me and he played it back during the net. Many questions were asked and most were answered and this special RAG Chew Net turned out to be very productive.

One negative incident ocurred when an unidentified person came in and tried to lecture us about another persons Swan radio (who had already checked into the net). When I asked the unidentified person his name and call sign, he said that he was not checking into our net. I asked him the second time for his call sign and he mumbled it very s l o w. I could not understand him and asked him to repeat his call sign a little faster and he told me to, "go to h_ll".

I told him to go to QRZ and enter K3UR and he would see that "I was going up in the opposite direction"! Fortunately we never heard from him again.

I want to thank everyone who checked into our net today and thanks again to John, KC2QMA for streaming the live audio over the internet during the net today.

<!-- Spoke.net Reviews -->
<!-- Copyright (c)1999-2000 Spoke.net, Inc. All rights reserved. -->

Jim Wharton NO4A

John Occhipinti (K3UR) has sent you a product review for your consideration.

----- start of message -----
TEN-TEC Radio Net Group

The following is a review from eHam.net:

THE INCOMPARABLE ORION II

After owning 19 HF radios in the past 36 years, I have found that my Orion II ranks at the top. To make a point, I sold my Yaesu FTdx5000MP that cost much more money.

As Net Control for the TEN-TEC 40 meter and 20 meter SSB Nets, I have checked in hundreths of Orion II radios and everyone has sounded excellent and all were completly satisfied with the all around performance of these radios.

The Orion II has an excellent close-in dynamic range and with the programable AGC, I can hear many of the weak stations that check into our nets.

The second receiver and the ability to use 3 antennas, makes the Orion II a DX'ers dream. The menus are very easy to set up and can be tailored to a persons preference.

I have been the Setup Specialist for the W2IHY Audio Gear for many years and the Orion II exceeds all expectations for mellifluous transmit audio. It is easy to EQ amd the receiver is fantastic. The headphones monitor circuit is outstanding and allows all of the lows, mids and highs to be heard. It also has the option of listening in stereo.

The autotuner is fast and quiet and upgrading to the latest version is quick and easy via the internet.

When anyone searches all of the various groups that sell used radios, you will seldom see an Orion II for sale.

The Orion II has exceeded all of my expectations and is the best all around HF radio in its orice class. In many ways it outperforms some of the higher price radios.

You can see my Orion II set up in my ham shack on QRZ http:www.qrz.com/db/k3ur and other pictures of it on the TEN-TEC Radio Net Group
http://groups.yahoo.com/group/ten_tec_radio_net

Among the many advantages of owning a TEN-TEC product is they are made in America, near the Smokey Mountains in Sevierville, TN. I have been to the TEN-TEC production facility and have been given a complete tour of the production plant and have see these radios being built from start to finish.

The TEN-TEC staff are some of the friendliest down to earth people and truly care about their customers. They are also very knowledgeable and are Amateur Radio Operators just like us.

As a TEN-TEC Ambassador and Net Control of the TEN-TEC 20 meter and 40 meter SSB nets, I can give both the Orion II and the TEN-TEC company my highest ratings.

Come join us each Sunday afternoon on the TEN=TEC SSB Nets. The 40 meter net starts at 19:00 UTC (3 PM Eastern Time)on 7.261 and the 20 meter net follows at 20:00 UTC (4 PM Eastern Time) on 14.325. Thank you.

John Occhipinti, K3UR

# 417. TEN-TEC SSB NET RESULTS JUNE 9, 2013

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-06-10 02:37:17 UTC
From: John Occhipinti
Topic: 417  Message: 417

The TEN-TEC 40 meter SSB warmup net started at 18:00 UTC on 7.261 with many stations checking in early to check radios, mics, audio, propagation and to ask questions about any TEN-TEC product. Bob, K4TAX was on the net and answered several questions from the net members. Bob is a TEN-TEC Beta Tester and also a TEN-TEC Ambassador and his knowledge about TEN-TEC products is really appreciated by me and all of the net members.

The regular TEN-TEC 40 meter SSB net started at 19:00 UTC with 94 people checking into the net. The TEN-TEC 20 meter SSB net followed at 20:00 UTC on 14.325 with 65 people checking into the net.

Congratulations to the 4 new TEN-TEC 10 Checkin Certificate Winners:

1.KC8YVP Bill OH
2.KC3AHY Lisa NJ
3.KC2VDL Steve NJ
4.KC2VDM Alex NJ

My appreciation to Lloyd N2KPC, NJ for his help, encouragement and instruction in helping many of the W2ZQ Club Members to get their Amateur Radio License. The 3 NJ winners above are an example of this.

Also thanks to Lloyd, N2KPC for this wonderful work as the Official Relay Station for the TEN-TEC 40 meter and 20 meter nets.

A special thanks to John KC2QMA, TN for streaming the live audio of the nets over the internet each week. Many people who are unable to check into the nets have been able to listen each week and really appreciate John's efforts.

A total of 731 different people have checked into the TEN-TEC nets since January 20, 2013, since the TEN-TEC Certificate Program was started by Jim Wharton, NO4A, Vice President TEN-TEC Inc. As you can see, this is a TEAM effort and I really do appreciate all of your support.

I will post the new Certificate Data Base in the FILES section in a few minutes. Thanks again and have a safe and blessed week.

# 419. TEN-TEC SSB NET INFORMATION

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-06-10 18:38:18 UTC
From: John Occhipinti
Topic: 419  Message: 419

The TEN-TEC SSB NET continues to draw new Amateur Radio Operators each week. This was very evident by the 30 new people that checked into
our 40 meter and 20 meter nets yesterday, Sunday June 9th.

I have been trying to include all of the various TEN-TEC Yahoo Groups in our TEN-TEC Net announcements and the disenchantment has resurfaced about the TEN-TEC CERTIFICATE PROGRAM.

I have given the members of several other TEN-TEC Yahoo Groups an opportunity to join us on the only net that is recognized by TEN -TEC INC.
The TEN-TEC SSB Nets have been posted on their website under the COMMUNITY section called, TEN-TEC ON AIR NET.

The TEN-TEC Certificate Program was started by Jim Wharton NO4A, Vice President TEN-TEC INC. on January 20, 2013 and has been accepted by the majority of TEN-TEC users.

For obvious reasons there has not been any negative comments on our TEN-TEC RADIO NET GROUP and from now on our TEN-TEC RADIO NET GROUP will be the only source of information about the TEN-TEC NETS, the CERTIFICATE PROGRAM and other important information that will benefit our members.

Many of our net members belong to several other TEN-TEC Yahoo Groups
and I really appreciate all of you that have supported our efforts here week after week, since I revived the TEN-TEC Nets in April, 2012.

The TEN-TEC Nets have always been open to take any questions or suggestions. We are NOT a "paper hanger net". We are the only bonafide
SSB Net that has been recognized and fully supported by TEN-TEC INC.

Your continued support is truly appreciated and with God`s help, I and Lloyd will continue to give 100 percent to the TEN-TEC SSB Nets each Sunday.

John, K3UR

From: John Occhipinti
Topic: 421  Message: 421

-------- Original Message --------
Subject: TEN-TEC FATHERS DAY NETS
From: John Occhipinti <k3ur@att.net>
To: ten_tec_radio_net@yahoogroups.com
CC:

On behalf of the TEN-TEC Radio Net Group, I want to wish every father a HAPPY FATHERS DAY.

I am the proud father of 3 children, Michele (School Teacher), Jeremy (School Teacher) and Jeffrey (Degree in Criminal Justice) and owner of his own business. This Fathers Day will be special for everyone who checks into the TEN-TEC Nets this Sunday.

In honor of Fathers Day, I am giving double check-in credits. If you check into the 40 meter net, you get credit for 2 checkins. If you check into the 20 meter net, you get credit for 2 checkins. If you check into both nets on Sunday, you get credit for 4 checkins.

The TEN-TEC 40 and 20 meter nets have always given people an opportunity to ask questions about any problems or concerns with any TEN-TEC product. There is always someone on the nets who can help or direct you in the right direction.

The fact that we seldom have any questions asked, reveals that there may not be problems at the time of the nets. I want to reinforce the fact that anyone can break into the nets at any time to ask questions or to share any pertinent information about any TEN-TEC product.

I just got an email from Jim Wharton, NO4A, Vice President TEN-TEC Inc., telling me that he and TEN-TEC supports our efforts 100 per cent and appreciates each TEN-TEC user.

I want to thank you all for your support and remember, UNITED WE STAND!
Feel free to post on our TEN-TEC RADIO NET GROUP. Asking any questions, problems or suggestions will be acknowledged and addressed. Thank you for all you do.

John, K3UR
Net Control, TEN-TEC Nets

# 422. HAPPY FATHERS DAY

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-06-14 13:21:53 UTC
From: John Occhipinti
Topic: 422  Message: 422

Happy Fathers Day to all of the fathers. Every father is encouraged to spend quality time with their children this Sunday.

If you can find time to check into our nets this Sunday (Fathers Day), take your children into your hamshack and tell them that you love them and want to show them the wonderful hobby that you are involved in. I will be doing the same.

It would have been easy for me to cancel the TEN-TEC nets this Fathers Day, but many of the Mothers could possibly get offended, because we did not cancel the nets on Mothers Day.

I appreciate each one of our net and group members and try to please everyone. When we grant one person's request, we usually offend another. I have tried to make decisions that are expedient to the majority of our Group members.

My philosophy in life has been, "If I give you a fish, you will eat today; but if I teach you teach you how to fish, you will eat tomorrow".

May God bless all the Fathers!

John, K3UR
Net Control, TEN-TEC Nets

John -

There is some QSB, but I'm hearing most everyone here in Jasper, GA. You were S9 +20 when you first checked in.

Maybe one of your neighbors got a new plasma TV for Father's Day...?

73,

Reed / WW3A

Murray KY. We had meet and greet tickets and had pictures taken with Phil and Willie. Jase and his wife along with Uncle Si were at Mayfield KY in April. I told Uncle Si that I was in "NAM" in 67, 68, and 69 and don't remember him on WNAM. He laughed and said you won't believe what those TV people make me say. They are really good folks.

Ed..

# 438. Re: Duck Dynasty....

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-06-18 11:45:09 UTC
From: w9cmd
Topic: 427  Message: 438

Never seen them in person, but from watching the shows, I can imagine they are all good folks. I watch the shows quite often. My wife just can't relate to them,... of course she was a city girl. My favorite show is the camper duck blind.

Oh well, back to radio !!
Best wishes,
Dave,
W9cmd

# 439. Check in Data base

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-06-18 22:23:34 UTC
From: Jim
Topic: 439  Message: 439

Did I miss the new updated check in data base? Last one I'm seeing is 6/9.

# 440. Re: Check in Data base

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-06-18 22:41:16 UTC
From: ki8du
Topic: 439  Message: 440

Just be patient, John is a very busy man. He will post when he uploads the new database, for last Sunday (Fathers Day).

I would venture to say that it will be out either Weds or Thurs, judging from the past....

Roger / KI8DU

# 441. TEN-TEC NET RESULTS JUNE 16, 2013

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-06-19 02:26:38 UTC
From: John Occhipinti
Topic: 441  Message: 441

I was out of town for several days and am just starting to update the Data Base from Sunday. I started the TEN-TEC 40 meter net early on Sunday at 18:00 UTC on 7.261 and after taking many early checkins, the 40 meter band went downhill in the Atlanta Area and the noise overpowered anyone else who was checking in, so I turned the remainder of the net over to our Official Relay Station, Lloyd N2KPC and we ended up with 85 people checking into the 40 meter net.

I started the TEN-TEC 20 meter net at 20:00 UTC on 14.325 and there was a pile up of checkins from 25 different states. Then I turned the remainder of the net over to Lloyd, N2KPC and we ended up with 84 people checking into the 20 meter net.

Congratulations to the new 10 Checkin Certificate winners:

1.KB1RVT Gene WV
2.WW3A Reed GA
3.K4VIG Gary GA
4.KB9RDS Steve IN
5.W3KRQ Rod PA
6.AD2DX Joe NJ
7.N8ME Mark OH
8.KD2AVE Dave NJ
9.NI4Z Condy AL
10.KD7WII Steve OR

Congratulations to the new 25 Checkin Silver Certificate winners:

1.WA0BAG Paul TN
2.KB3ML Paul PA
3.N8OP Bill WV
4.WA9GQK ED IL
5.WA4OSS Charlie NC

We had 24 new people check into the nets on Sunday. We also have had 753 different people check into the nets since January 20, 2013, when the TEN-TEC Certificate Program was started by Jim Wharton NO4A, Vice President TEN-TEC Inc. Thank you Jim!

A great big thank you to Lloyd, N2KPC for the outstanding job he has been doing as the Official Relay Station for the TEN-TEC nets.

A great big thank you to John, KC2QMA for streaming the live audio over the internet during both nets.

Note: I am now running both my Orion II and Omni VII radios without any mic plugged into the front of the radios. I am taking advantage of the AUX I/O 8 pin din receptacle on the back of my Orion II for line level in/out audio from my Behringer 1604 Mixer. See page 27 and 28 of the Orion II manual.

I am also utilizing the ACC 1 (5 pin din) receptacle on the back of my Omni VII for the same line level in/out audio from my Behringer 1604 Mixer. See page 16 and 17 of the Omni VII manual. I also use a footswitch to key the radios (as these 2 back receptacles both have PTT).

I will post the new Certificate Data Base shortly. Please check your number of checkins and remember, I gave everyone double checkin credits for the Special Fathers Day nets. So, if you checked into both nets, you received 4 checkin credits.

Thank you for your continued support for the TEN-TEC nets.

Nick, I have made the correction. Thank you for bringing this to my attention.

Attention Jim Wharton,

Jim, please note the correction for one of the 10 Certificte winners.

1.KB1RVT, his name is Nick and he is in VT.

Jim, I trust you had a good time at your daughters wedding and your vacation. Welcome back.

# 453. SPECIAL REQUEST FOR ALL ten_tec_radio_net GROUP MEMBERS

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-06-21 00:29:09 UTC
From: John Occhipinti
Topic: 453  Message: 453

I have a special request to all active members of the ten_tec_radio_net Group. The next few weeks will bring about some exciting new things for the ten_tec_radio_net Group.

To name a few;

1. A special event and bonus will be announced for the Fourth of July Holiday.

2. There are 9 people who presently have over 40 checkins to the TEN-TEC SSB Nets and will qualify for their TEN-TEC 50 Checkin Gold Certificates in the next few weeks.

3. I am inquiring about having a TEN-TEC 40 meter SSB Net at the TEN-TEC Hamfest in September.

My request is for every subscriber (member) of the ten_tec_radio_net Group
http://groups.yahoo.com/group/ten_tec_radio_net/

to send their full name, call sign and the name (handle) you used when you signed up for the ten_tec_radio_net Group. I am asking this as a special favor, because many have used "handles" or other "nicknames" and some have not even included their call sign.

As Group Owner, I do have access to the membersip list, but cannot determine who certain people are. I need this information and I am asking that everyone forward this information to my personal email, in full confidence. k3ur@...

Our ten_tec_radio_net Group was newly formed in March in order to hold the TEN-TEC SSB Nets together. Most know the details and I will not elaborate. In the spirit of good will and for the good of Amateur Radio, the past is "water over the dam" and it is time to move forward and extend the hand of fellowship.

Many of us are TEN-TEC Ambassadors, but we also need to be Good Will Ambassadors for Amateur Radio. Thank you for your understanding and thank you for all the support you have given us.

# 454. Problem with USB to serial cable

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-06-21 00:36:47 UTC
From: clayton_n4ev
Topic: 454  Message: 454

I purchased my cable from TenTec about the time I bought my Jupiter. I have tried several times to make it work with HRD and just gave up. Radio works great with a normal serial cable and have been using it for quite a while. Oh, it does not work with the Omni VI+ either.

Last year I was in Sevierville and they swapped cables with me and I tried it again with the same results. Today I downloaded another driver and it said the cable was there as com3, identified the chip by type and then loaded HRD. Did not work again. Back to the old serial cable and everything is OK.

I load the driver, plug the cable in and Windows says it's working. WHAT IS THE PROBLEM?

At my wits end!

Clayton N4EV

Are you talking about a USB Serial Adapter? For me the best I've found is the Tripp-Lite Keyspan USA-19HS.

# 460. FIELD DAY

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-06-21 21:44:06 UTC
From: John Occhipinti
Topic: 460  Message: 460

I was in touch with Jim Wharton, NO4A, Vice President TEN-TEC INC. today
and he told me to listen for him tomorrow (Saturday) on 6 meters. He will be working mobile
6 and 2 meters from the top of the mountain for FIELD DAY.

I want to thank the 35 people who responded to my email address today with their full name
and call sign. There are still 120 more and I trust the rest of the members of the
ten_tec_radio_net Group will send me the same information that I requested.

Have a great FIELD DAY!

John, K3UR,
Group Owner, ten_tec_radio_net Group

Jerry:  I'm talking about one that TenTec sold a few years back.  I forget the model #, but

this thing has never worked with any of my radios.  I have an old packet TNC that I'm

going to try to see if the problem is with HRD.  I have never been able to get it working so I have retained my old serial cables.  I do have another computer that I would like to use with the radios and it does not have any serial ports.  I am migrating from Windo$$$ and bringing up Linux and the other computer has the CWRlog program which has HRD beat.  Beautiful thing about Linux is IT"S FREE and most of the programs are too.  You have the option to donate, not required.

I’ve had no problems with the TenTec USB to serial cable I bought. There are lots of ways to hook serial devices up and many ways to configure the computer or hardware.... only a few will work.

# 467. TEN-TEC NETS TODAY (SUNDAY)

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-06-23 13:01:28 UTC
From: John Occhipinti
Topic: 412  Message: 467

The TEN-TEC 40 meter net will be in progress today (Sunday) at 19:00 UTC on 7.261 and the 20 meter net will follow at 20:00 UTC on 14.325. I will be on 7.261 one hour earlier at 18:00 UTC (2PM Eastern Time) for those who want to check radios, mics, antennas, or to discuss anything concerning TEN-TEC products.

I want to thank the 45 members of our ten_tec_radio_net Group that responded to my personal email with their full names, call signs and "handles" used when they subscribed to the ten_tec_radio_net Group. We have 155 members and only 45 have responded to my personal email address with this information. I would really appreciate this information for theTEN-TEC Certificate Data Base.

Also, future special awards will be given to those who have responded with this information. Many have subscribed and may not read the messages that are posted on the ten_tec_radio_net Group. So Lloyd and I will be reminding everyone that checks into the 40 meter and 20 meter nets today.

The membership list contains just "handles" for many who subscribed and I cannot determine who they really are. The ""handles" and "nicknames" are okay to leave there, but the full name and call sign should accompany this. Please try to understand where I am coming from, as this full information will be a requirement to receive future awards that are pending. Thank you.

# 469. Ten Tec NET TODAY, Field Day & QRM.

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-06-23 13:47:58 UTC
From: kc2qma
Topic: 469  Message: 469

I think it might be a good idea to get on the 40M and 20M nets early today due to the Contest stations that will most certainly make copying signals difficult due to QRM. Although I have no problem with contesting many contesters like to take over the bands and disregard other amateur radio activity.
So let's be polite and courteous to the contesters and stake out our freqs early so we have some hope of having a good net today without us interfering with them and them us.
73/KC2QMA
John

John, yes your info was good when you originally signed up. Thanks again for your support of the nets and the ten_tec_radio_net Group. Thank you for streaming the live audio during the nets. Many have used this added feature and they really appreciate you for your efforts.

From: Clayton Brantley
Topic: 454  Message: 473

To all that replied and/or read my post, problem is half way solved.  The USB/serial cable works
with an old TNC and Hyperterm (Windoz).  It still refuses to work with HamRadioDeluxe.  Not too sure what the issue is.  My next testing will be with the Jupiter and Hyperterm.  Both the Omni
and Jupiter work with the old reliable serial cable.

I’ve had no problems with the TenTec USB to serial cable I bought. There
are lots of ways to hook serial devices up and many ways to configure the
computer or hardware.... only a few will work.

cable

Jerry:  I'm talking about one that TenTec sold a few years
back.  I forget the model #, but

this
thing has never worked with any of my radios.  I have an old packet TNC
that I'm

going
to try to see if the problem is with HRD.  I have never been able to get it
working
so
I have retained my old serial cables.  I do have another computer that I
would like to
use
with the radios and it does not have any serial ports.  I am migrating from
Windo$$$
and
bringing up Linux and the other computer has the CWRlog program which has

HRD
beat.
Beautiful thing about Linux is IT"S FREE and most of the programs are too.
You
have
the option to donate, not required.

# 474. Net relays

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-06-23 20:43:48 UTC
From: Radio Geekie Boy
Topic: 474  Message: 474

I am normally not in the house on Sunday afternoons during warmer months so today was my very first day of actually trying to check in to the Ten Tec nets. Unfortunately, I do not currently have my amplifier operational and after about two hours of trying barefoot, there was no joy given the propagation conditions we have been having.

I could not hear either John or Lloyd at all on 40 meters, and while I heard John fine on 20 meters, evidently he was not hearing me. I know there were some other stations that I heard who were stronger than John was to me who likely were hearing me, but nobody offered me up as a relay. The bottom line was that I never got on John's check in list until he heard me at the very end as a "foxtrot", but then never came back to me before he turned the 20 meter net over to Lloyd. After that, it became an impossibility for me to get in because Lloyd and I are just too close to each other.

May I suggest that the net control on both bands give a call out for relays more often and that some of the stations who are hearing others whom net control can not hear be given more of an opportunity to relay in stations that normally would not have a chance.

Thank you for listening.

Barry, thank you for your patience today on 20 meters. I did copy you the second time while Lloyd was talking and I had already logged you into the TEN-TEC 20 meter net.

What part of Northern Jersey are you in? I was raised in Paterson, NJ and graduated from Central High School. Thanks again and we will call for more relays in future nets.

Clayton, if you have the cable working with a device and a software, note the serial port parameters which work controlling the device ( Com 6, 57600, 8, NONE 1, Off, Flow ). The last two, which can determine if the device is ready (or if the control even cares) and how the communications start and stop are the ones to watch, assuming the port number, speed, length, # stop bits, and parity are the same.

I’ve not used HRD as I’ve used DXLab for my OMNI-VI+, now OMNI-VII, FLEX-1500 and other devices. Send me off net (glhuber@...) the serial signaling specs of the devices and controlling software combinations, the pair that works and the pair that does not, with the same USB to serial cable. I’ll see if I can help and let you know.

From: John Occhipinti
Topic: 483  Message: 483

"THANK YOU LLOYD N2KPC", by John D, Occhipinti, K3UR

Thank you Lloyd, for doing your part,
your expertise has shown, right from the start,
we are a part, of the TEN-TEC nets,
we both have endured, this is good as it gets,
TEN-TEC has been great, to all of us guys,
as our signals keep reaching, way up to the skies,
thanks again Lloyd, I want you to know it,
that I'm just plain John, trying to be a poet!
---

This is a small gesture to acknowledge Lloyd, N2KPC, who is my "right hand man" and also The Official Relay Station for the TEN-TEC 40 meter and 20 meter nets.

I want to thank the 73 members of the ten_tec_radio_net Group for sending to me your full name and call sign when you originally subscribed to the ten_tec_radio_net Group. There are 158 members and we are still waiting for the other 85 members to send this information to me, as I am working hard to complete the Group Data Base.

For those that have not been reading the posts up to now, there are many who used "Yahoo handles or nicknames" and did not enter their call signs, when they subscribed to the ten_tec_radio_net Group. The "handles or nicknames" are okay, but we still need the full call sign.

I have seen that some have unsubscribed recently (and I do not know why), but on the other hand, we have had new people subscribe recently. Welcome to the Group!

I want to let everyone know that you all are important to me and I appreciate each one that has supported me in the past 14 months, since I revived the TEN-TEC nets after they were dormant for several years.

# 485. TEN-TEC 40 & 20 METER NET RESULTS FOR 6-23-2013

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-06-26 23:25:40 UTC
From: John Occhipinti
Topic: 485  Message: 485

I apologize for the delay, as I have had a very busy week thus far trying to get the ten-tec-radio-net Group Data Base together. It is not complete yet and may not be complete, due to the lack of response to the information (call signs) that were missing, when many first subscribed to the ten-tec-radio-net Group.

I checked with the Group Moderator today and was given the "green light" to post the results from this past Sunday's TEN-TEC nets. The 40 meter net was under way at 18:00 UTC on 7.261 with many early checkins and round table discussions. The 40 meter net officially started at 19:00 UTC with 69 people check in.

The TEN-TEC 20 meter net followed at 20:00 UTC on 14.325 with 67 people checkin in, including N6HQT, Doc in San Diego, CA. He told me that he was 97 years old. When I checked his callsign on QRZ, sure enough, he was born in 1916. God bless him for his long life and still being active on Amateur Radio.

Before I get to the new Certificate winners, I have an announcement. This Sunday's TEN-TEC 40 meter and 20 meter nets (June 30th) will be suspended until the following Sunday (July 7th), due to the fact that my youngest son is returning from the Middle East.

You are free to get together this Sunday, but any checkins will NOT count for the TEN-TEC Certificate Program.

Congratulations to the new 10 Checkin Certificate winner:

WS5C Will in TX

Congratulations to the 5 new 25 Checkin Silver Certificate winners:

1.W2DD George NJ
2.VE3JWH John CN
3.AC5RK Michael MS
4.K9DY Steve IN
5.WA3DX Earl NJ

I have recently received some emails that appear to be trying to restrict me from repeatedly mentioning the TEN-TEC nets, the TEN-TEC Company and the Vice President of TEN-TEC Inc., Jim Wharton NO4A.

Here is my response....In April 2012, I bought my first TEN-TEC radio and went on several of the TEN-TEC Groups asking where the TEN-TEC net was located. The response was that since Dudley went to work for Flex Radio several years ago, the TEN-TEC nets ceased to exist, because nobody was willing to take over the net.

I posted on the Omni VII Group for several TEN-TEC users to meet me on 20 meters for a get together and round table discussion. Many people showed up and I told them to meet the following Sunday. The response was overwhelming and Jim Wharton NO4A, Vice President TEN-TEC Inc. asked me to take over the TEN-TEC net and I accepted. He quickly posted the TEN-TEC net on the TEN-TEC Website.

The net became more popular each week and several months later we were asked to also start a 40 meter net and we did. Because nobody came forward, I took over the responsibility of Net Control for both the 20 meter and 40 meter nets and the rest is history.

Jim Wharton contacted me at the beginnning of this year about the possibiblity of TEN-TEC giving away Certificates. After several weeks of discussion, the TEN-TEC Certificate Program started on January 20th of this year.

I was posting announcements about the TEN-TEC nets on all 5 of the TEN-TEC Reflector Groups from the beginning (April 2012). Soon after many people started to receive their first certificate, the complainers started posting that they were not interested in nets or the certificate program.

Personal hate emails came to me on a daily basis, not only attacking me, but also attacking my family and vocation. This is when something had to be done, so I formed our own group on March 20th of this year called, the ten_tec_radio_net Group.

Whithin a few days we had over 100 members subscribe and now the ten_tec_radio_net Group has 158 elite members and I appreciate each and everyone.

This Group was formed so we, the TEN-TEC nets could speak freely about the TEN-TEC nets, the TEN-TEC Certificate Program, the TEN-TEC Company and yes even thanking Jim Wharton NO4A, Vice President TEN-TEC Inc. for all of the support he and TEN-TEC has given us the past 14 months.

The Group Moderator has given me the "green light" to mention all this. The bible even says not to muzzle the mouth of the oxen!

This is NOT a one man show. I nominated Lloyd N2KPC as the Official Relay Station for the TEN-TEC nets several months ago and he has done an outstanding job. Lloyd lives and breathes TEN-TEC and he certainly was the man for the job.

Another member of our team is John KC2QMA, a recording engineer from Nashville, TN, who has been streaming the live audio over the internet each Sunday. He even took the initiative to have a TEN-TEC round table net when Lloyd and I were working at the TEN-TEC Booth at the Dayton Hamvention last month.

Thank you for your support and I will talk to again on July 7th. God bless you and your families (yes the Moderator has given me the "green light" to mention God on this Group)!

Due to all the reasons mentioned on this forum to date, I have quit all of the other Ten Tec groups, save the Jupiter group that has, so far, remained civilized. It was either that or flame 'em. Didn't want to descend to a lower level.

# 489. UPDATE ON SUNDAY'S CERTIFICATE WINNERS

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-06-28 09:30:41 UTC
From: John Occhipinti
Topic: 489  Message: 489

Due to the Net Control having a "senior moment", another 25 Checkin Silver Certificate winner was overlooked this past Sunday. My aplologies and congratulations to:

WA4THR Vic in PA

Vic was the (6th) Sixth 25 Checkin Silver Certificate winner on Sunday. I just notified Jim Wharton and Vic will be receiving his beautiful certificate from TEN-TEC. The other winners are on my previous net announcement.

The new Data Base will be posted in a few minutes. Thank you for your patience.

# 490. NEW DATA BASE IN FILES SECTION

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-06-28 11:34:23 UTC
From: John
Topic: 490  Message: 490

Check the FILES section for the new Data Base.

Due to the fact that my younger son is returning from the Middle East, I will not be conducting the TEN-TEC 40 meter and 20 meter SSB Nets this Sunday. The Certificate Program will NOT be in effect this Sunday.

Lloyd N2KPC will be running the nets this Sunday and in place of the TEN-TEC Certificate Program, many of the people that check in will be encouraged to ask questions about any TEN-TEC product. This will be a good time to take the focus off of Certificates and focus on a question and answer session.

I will be returning the following Sunday July 7th to resume as Net Control and also to resume the Certificate Program. People that check in on every net will be given an opportunity to ask questions and also to share anything that may benefit TEN-TEC users.

Thank you for supporting the TEN-TEC nets.

# 495. ADDITIONAL 25 CHECKIN SILVER CERTIFICATE WINNERS

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-06-29 00:04:05 UTC
From: John Occhipinti
Topic: 495  Message: 495

The purpose that I post the latest Certificate Data Base each week in the FILES section, is for each ten_tec_radio_net member to check the list for your calll sign and number of checkins.

There is no hidden agenda here, as the few oversights on my part were not intentional. I appreciated hearing from Oz and Jerry today and they were correct.

Jerry KI4PS in VA, qualified back on June 9th for his 25 Checkin Silver Certificate. I apologize for this oversight Jerry and I am forwarding your name and callsign to Jim Wharton.

Oz KY4OZ, informed me that his friend Danny KF4GZR in KY has 26 checkins and I aplogize for this oversight this past Sunday. Danny, I am also forwarding your name and callsign to Jim Wharton.

I am asking each member of our Group to check the Cartificate Data Base each week and please let me know if their are any errors, so I can correct them. I am really a big hearted guy, after all, I have given double checkin credits on several occasions in the past few months!

Thanks again to all the members of our ten_tec_radio_net family.

Sorry it's taken me so long to get back. Don't know exactly what I signed up with but for things like this I do just usually use my name and call in plain text with no cutesy nicknames, HI! So here it is:

Ed Schumacher, WA9GQK  Main rig Ten Tec Original Orion and Alpha PA-70V when needed. Backup (usually for 40M net) Signal One CX-7A w/B upgrades.

Am really enjoying the nets so keep up the FB work. Hope to see you agn at the Open House in September.

# 506. ten_tec_radio_net Group News

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-07-01 00:17:09 UTC
From: John Occhipinti
Topic: 506  Message: 506

Congratulations to all of the new subscribers (members) of the ten_tec_radio_net Group that joined this past week. We are now up to 163 members since we organized this new Group on March 20th of this year. Your support is truly appreciated.

A great big thank you to all of our members who sent their full names and call signs to me. I have received 122 completed names and call signs for the ten_tec_radio_net Group Data Base. There are still 41 more that is needed and I would appreciate if this information is sent to me so I can complete the Data Base. Thanks in advance and you can send this to my personal email in full confidence.

When some people subscribed to our Group (which is a Yahoo Group) their Yahoo names are showing up on the members list without a callsign. I am anxious to complete the Data Base and need this information. Again I say thank you for your time and I want each member of our
Group to know that you are all special and I appreciate each one of you. We are family!
---

SPECIAL ANNOUNCEMENT:

We will be having special Fourth of July TEN-TEC SSB nets this Thursday and I have decided to award each person that checks into the nets with DOUBLE CHECKIN CREDITS!

The 40 meter SSB warmup discussion will start at 18:00 UTC (2PM Eastern, 1PM Central) on 7.261. This will be a time to ask questions, share important information, check radios, mics, antennas and to contact others on the warmup net. I am sure the topic of the Orion II being discontinued will be taken up. (you can dress casual for this net)!

The 40 meter SSB Net will start at 19:00 UTC (3PM Eastern, 2PM Central) on 7.261 and the 20 meter SSB Net will follow at 20:00 UTC (4PM Eastern, 3PM Central) on 14.325.

Thanks for all the new pictures that were recently posted in the Photos section. I want to remind everyone that I have also made Attachments available to the Group and feel free to utilize this feature.

Have a wonderful week, be safe and God bless each of you and your families.

What a bummer! I got the same email too from Jim Wharton. I'd love it is we had an Orion III with features that would compete with the TS-990. Well, time will tell. Up to this point, I guess the Omni VII will be the Ten-Tec "Flag Ship Transceiver" for now.

"THE ORION II STILL LIVES ON", by K3UR

The Orion II still lives on, in spite of production ceasing,
don't hold a funeral for it yet, I say it's popularity will be increasing,
as an owner of this fine radio, there's nothing really to fear,
it's time to keep our heads up high, because TEN-TEC will always be here,
many radios have come and gone, as a far as production is concerned,
keep operating your Orion II , don't act as if you've been burned,
some seem that it's the end of the world, I say do not fret or fear,
it's just a matter of time, when a new radio will appear,
don't hold a funeral for it yet, don't give up whatever you do,
this radio is still one of the best, just keep active with your Orion II.

it's time to keep our heads up high, because TEN-TEC will always be here,
many radios have come and gone, as a far as production is concerned,
keep operating your Orion II , don't act as if you've been burned,
some seem that it's the end of the world, I say do not fret or fear,
it's just a matter of time, when a new radio will appear,
don't hold a funeral for it yet, don't give up whatever you do,
this radio is still one of the best, just keep active with your Orion II.

"THE ORION II STILL LIVES ON", by K3UR

The Orion II still lives on, in spite of production ceasing,
don't hold a funeral for it yet, I say it's popularity will be increasing,
as an owner of this fine radio, there's nothing really to fear,
it's time to keep our heads up high, because TEN-TEC will always be here,
many radios have come and gone, as a far as production is concerned,
keep operating your Orion II , don't act as if you've been burned,
some seem that it's the end of the world, I say do not fret or fear,
it's just a matter of time, when a new radio will appear,
don't hold a funeral for it yet, don't give up whatever you do,
this radio is still one of the best, just keep active with your Orion II.

Will this commitment to open source apply to the Jupiter? Either way, it's nice to know that Ten Tec is listening. That's just one reason why Ten Tec enjoys product loyalty comparable to that of Harley-Davidson and a precious few others. Another reason is the commitment to service and repair for as long as the parts remain available.

Mark and the entire ten_tec_radio_net Group,

Because of all your good livin'
double check-in credits will be given,
come one come all to the TEN-TEC Nets,
this is truly as good as it gets,
I'm inviting the entire TEN-TEC cast,
the FOURTH is going to be a BLAST!

# 517. TWO FOR ONE ON THE FOURTH

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-07-03 15:50:19 UTC
From: John Occhipinti
Topic: 517  Message: 517

There will be a Special 4th of July get together for the TEN-TEC SSB Nets tomorrow, Thursday July 4th. To reward all those that check into the nets on this special day, I will be awarding double credits. If you check into the 40 meter net, you will receive credit for 2 checkins. If you check into the 20 meter net, you will receive credit for 2 checkins. If you check into both nets, you will be receiving credit for 4 total checkins.

The TEN-TEC 40 meter SSB Warmup Net will start at 18:00 UTC (2PM Eastern, 1PM Central) on 7.261. This is a time that we utilize to check different radios, mics, antennas, propagation, to ask technical questions and also to share pertinent information about any TEN-TEC product.

Let us not forget that the primary reason why I started up the TEN-TEC SSB Nets in April 2012, after several years of no nets, is to gather TEN-TEC users on a specific Amateur Radio frequency, with the purpose of asking questions and sharing any vital information about any TEN-TEC product. The TEN-TEC Certificate Program, which was the idea of Jim Wharton NO4A, Vice President TEN-TEC Inc, started 9 months later on January 20th of this year.

Trying to strike a "happy medium" for everyone has been difficult, when so many people have been checking into our nets and SO FEW people asking questions. Just like any other net or round table on Amateur Radio, all anyone has to do is call, "contact, break, question" or any other way to get our attention. Others waiting to check in must be patient and their turn will come.

If I do not hear the station calling, we always have Lloyd N2KPC, the Official Relay Station for the TEN-TEC nets and anyone else is free to relay the stations. There is no "I" in TEAM, it takes teamwork!

Keep in mind that we have John KC2QMA, Recording Engineer from Nashville, TN who streams the live audio over the internet during each of the nets. Just go to QRZ and enter KC2QMA and follow the easy instructions to listen to yourself and everyone else on the nets.

The Official TEN-TEC 40 meter SSB net starts at 19:00 UTC (3PM Eastern, 2PM Central) on 7.261 and the TEN-TEC 20 meter SSB Net follows at 20:00 UTC (4PM Eastern, 3PM Central) on 14.325.

Thanks to all of the new members that joined the ten_tec_radio_net Group this past week. We are now up to 163 members since strarting this Group on March 20th of this year.

Thanks for all of your support for the TEN-TEC SSB nets and also the ten_tec_radio_net Group.

# 520. TWO FOR ONE ON THE FOURTH (TEAMWORK)!

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-07-04 13:13:05 UTC
From: John Occhipinti
Topic: 520  Message: 520

The theme for the TEN-TEC SSB Nets today, Fourth of July and for every net will be the word, "TEAM" (together each achieves much)!

There will be a Special 4th of July get together for the TEN-TEC SSB Nets today, Thursday July 4th. To reward all those that check into the nets on this special day, I will be awarding double credits. If you check into the 40 meter net, you will receive credit for 2 checkins. If you check into the 20 meter net, you will receive credit for 2 checkins. If you check into both nets, you will be receiving credit for 4 total checkins.

The TEN-TEC 40 meter SSB Warmup Net will start at 18:00 UTC (2PM Eastern, 1PM Central) on 7.261. This is a time that we utilize to check different radios, mics, antennas, propagation, to ask technical questions and also to share pertinent information about any TEN-TEC product.

Let us not forget that the primary reason why I started up the TEN-TEC SSB Nets in April 2012, after several years of no nets, is to gather TEN-TEC users on a specific Amateur Radio frequency, with the purpose of asking questions and sharing any vital information about any TEN-TEC product. The TEN-TEC Certificate Program, which was the idea of Jim Wharton NO4A, Vice President TEN-TEC Inc, started 9 months later on January 20th of this year.

Trying to strike a "happy medium" for everyone has been difficult, when so many people have been checking into our nets and SO FEW people asking questions. Just like any other net or round table on Amateur Radio, all anyone has to do is call, "contact, break, question" or any other way to get our attention. Others waiting to check in must be patient and their turn will come.

If I do not hear the station calling, we always have Lloyd N2KPC, the Official Relay Station for the TEN-TEC nets and anyone else is free to relay the stations. There is no "I" in TEAM, it takes teamwork!

Keep in mind that we have John KC2QMA, Recording Engineer from Nashville, TN who streams the live audio over the internet during each of the nets. Just go to QRZ and enter KC2QMA and follow the easy instructions to listen to yourself and everyone else on the nets.

The Official TEN-TEC 40 meter SSB net starts at 19:00 UTC (3PM Eastern, 2PM Central) on 7.261 and the TEN-TEC 20 meter SSB Net follows at 20:00 UTC (4PM Eastern, 3PM Central) on 14.325.

Thanks to all of the new members that joined the ten_tec_radio_net Group this past week. We are now up to 163 members since starting this Group on March 20th of this year.

Thanks for all of your support for the TEN-TEC SSB nets and also the ten_tec_radio_net Group.

Marginal copy in Bloomington, IL during warm-up. Little to no copy of Net Control or Alt. NC during checking of actual net even using the FLEX-1500 sub-receiver of my OMNI-VII. The FLEX-1500 allows for additional receive audio equalization to drive the AOR TDF-370 which drives the J-Hooks which inductively couple with the Tele-coils of my Seimens Centra ITE Hearing Aides.

The Net Control is actually more difficult to work from this location than DX and given I’ve worked every entity except for two.

I will try again.

7.261 has a horrible heterodyne on it in Northern VA. Can't hear a thing.

Gary, there is no problem on my end, as I have you logged in on both the 40 meter and 20 meter nets today. Band conditions, QRM and other extraneous noise will ususally make it difficult to copy each other at certain times. Thank you for checking into both nets today and as a result, I have given you 4 checkin credits for today.

# 526. JULY FOURTH FIRECRACKER NET RESULTS!

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-07-05 02:05:32 UTC
From: John Occhipinti
Topic: 526  Message: 526

A great big thank you to all those who made a special effort to check into the TEN-TEC Special Fourth of July 40 meter and 20 meter nets today. Many were rewarded as you shall see below.

The TEN-TEC "warmup net" started at 18:00 UTC on 7.261 with many questions being asked and answered. The Official TEN-TEC 40 meter SSB net started at 19:00 UTC on 7.261 with 66 people checking in. The TEN-TEC 20 meter SSB net followed at 20:00 UTC on 14.325 with 59 people checking in.

Congratulations to the new 10 Checkin Certificate Qualifier:

N9VO Jim IN

Congratulations to the new 25 Checkin Silver Certificate Qualifiers:

1.K4WWL Dexter NC
2.KI8DU Roger WV
3.K9ARM Andy IL
4.K8MAZ Mark MI
5.KB2YOA Gaye NJ

Congratualations to the new 50 Checkin Gold Certificate Qualifiers:

1.W3TS Mike PA
2.N2KPC Lloyd NJ
3.W2ZQ Lloyd, NJ

Note:Husband, Lloyd N2KPC and Wife, Gaye KB2YOA both are smiling tonight!

Thanks to Lloyd for his wonderful job as Official Relay Station for the TEN-TEC Nets and thanks to John, KC2QMA for streaming the live audio over the internet during both nets

We had 19 new people checking into the nets today and a total of 795 different people have checked into the nets since January 20, 2013, when the Certificate Program started.

I will post the new Certificate Data Base in a few minutes. Be sure to check your totals. Remember, everyone that checked into the Special Fourth of July nets today received credit for double checkins. _ _ _ _ _ _ _ _. You are welcome!

John, thanks to you for the net, Lloyd and all the others who helped with relays, etc. I could barely hear you and Lloyd on 40, conditions have not been great for a few weeks, at least when I've been on. On 20, you were 58/59 in the northwest suburbs of Chicago in the mobile. I believe I may have heard Gary in the fray on 40.

I had to take the antennas down at home because the new apartment owners decided to enforce the rules, I got away with them for a long time. But the mobile works well, I can get out when I need to. We are actively looking for a house to buy, so it won't last forever.

I sold the Corsair II, but still have the 238 tuner. Plans are to buy an Eagle soon. I do plan to run it mobile, also.

Look for you Sunday,
Andy K9ARM

# 529. A MESSAGE FROM THE ten_tec_radio_net Group Moderator

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-07-06 13:45:24 UTC
From: John Occhipinti
Topic: 529  Message: 529

Because of the questionable and unpopular decisions that polititions in Washington have made, most businesses have had to modify the way they do business. Rules, regulations, excessive taxes and other "noose tightening tactics" have made it necessary to down size and cut expenses, while still being able to keep their heads above water.

Most of you already know that business decisions have also precipitated changes at TEN-TEC Inc. and one of these decisions was to stop producing the Orion II. On the brighter side, repairs and "software updates" will continue for both the original Orion and the Orion II.

TEN-TEC is a company that has always been on the cutting edge of technology and will continue to operate with the integrity that has made them one of the most popular Amateur Radio manufacturers and one that has gained the respect of its customers through outstanding customer service and the best warranties in the Amateur Radio business.

TEN-TEC Inc. will continue the Certificate Program, which includes the 10 Checkin Certificate, the 25 Checkin Silver Certificate and the 50 Checkin Gold Certificate. Anything else that was in the discussion mode, is still being negotiated. Unexpected things in life and especially in businesses require changes and these unexpected things that arise are directly caused by the very things that I opened this message with.

Yes, politics and religion are not taboo on the ten_ten_radio_net Group and as long as civility is maintained, people are free to comment pro or con. If there are any questions about the TEN-
TEC Certificate Program, please send them directly to k3ur@....

The Net Control of the TEN-TEC SSB nets wants everyone to know that the nets will be in operation tomorrow (Sunday) at the usual times. Thank you.

Gubment policies aside, new technology replaces the old and parts become scarce and expensive. Tried to find Ford Model T parts lately? They're available but bring your wallet. I'm sure some people didn't like seeing the Paragon, Jupiter and other great radios of all makes discontinued either but that's how it goes.

Ten Tec needs to stay current with and even ahead of the curve if they want to continue to successfully compete in this market. Looking at past history, every time Ten Tec ceases production of one thing, it's always replaced with something better. Ten Tec's commitment to support and service older gear as long as is possible surpasses most other manufacturer's policies. Let's suck it up and look to the future.

Religion and politics don't need to be taboo as long as people remain tolerant and respectful of the opinions and beliefs of others. That's the American way.

Bill AE7KB

John,

Its likely it was Andy K9ARM, and NOT AB9M who should receive the 4th of July net check-in credit. I could not hear you or the alternate during the net. I did try checking in several times but never heard a relay verifying that I was in the net. K9ARM and K9HVI were loud here. I have my K9AY Loop System down for the summer as well as my half sloper, and low dipole. The top loaded HV-2 (160-80-40) I was using is good for DX but its not much good for close – in work. The low dipole working in NVIS mode probably is what I need to get back in operation for the TenTec Net.

I do NOT want credit for something I did NOT do. Please remove any net check in credit to AB9M as I have not made any check ins at any time previously.

73 ES DX,
Gary -- AB9M

John, thanks to you for the net, Lloyd and all the others who helped with relays, etc. I could barely hear you and Lloyd on 40, conditions have not been great for a few weeks, at least when I've been on. On 20, you were 58/59 in the northwest suburbs of Chicago in the mobile. I believe I may have heard Gary in the fray on 40.

I had to take the antennas down at home because the new apartment owners decided to enforce the rules, I got away with them for a long time. But the mobile works well, I can get out when I need to. We are actively looking for a house to buy, so it won't last forever.

I sold the Corsair II, but still have the 238 tuner. Plans are to buy an Eagle soon. I do plan to run it mobile, also.

Look for you Sunday,
Andy K9ARM

Well said Bill.
I don't think the government is the reason for TT discontinuing the Orion II. I think bill hit the nail on the head. Like any business it must operate at a profit to stay in business. Now with the restructuring of two of the major Japanese brands recently (Yaesu & Kenwood) and their release of new competitive products Ten Tec must do what they have to do to be competitive as well. Try to keep in mind Ten Tec is a much smaller company and has fewer resources than the Japanese manufactures however I think that to a degree that is a plus because when Ten Tec makes a product they don't just abandon it after a year or two like the other companies do. Ten Tec is very different in that they continue to develop and support their products even after they have gone out of production and because of the slower product cycle when they do come out with a new product it's not just the technology for next year it's the technology of the future and all the other companies spend years trying to catch up.
-
Like I said TT is a small compared to the big Japanese companies so they cannot just make 30 to 40 different rigs, So they focus on making less but better rigs instead And that's why Ten Tec Radio has been around since 1968!
A lot has changed over the years, they have been through many US presidents and their administrations as well as many economic up's and down's and they are still here.
-
Now try to remember when the original Orion/II come out it took the other companies Years to even come close to the features and specs of the Orion/II and to this day it's still in the top 5 for best transceiver performance. I'm sure Ten Tec has kept their eye on the market they have some new ground breaking products coming up the pike so just be patient I know Ten Tec will have some new rigs that we will all love.
-
Like I always say "If you really care buy USA made products whenever possible" Because when you do YOU are supporting our economy and keeping American workers working!

John,

I did check in to the 40 meter warm up and after a relay I heard you ask 9M for information but I never heard an acknowledgement. Given, I did attempt a check in for the 40 meter session, however I cannot accept the credits ( 2 ) for the July 4th TenTec 40 meter net because after the initial opening I did not hear you or the alternate Net Control except momentarily. Given, I did not attempt a check in for the 20 meter session, I cannot accept the credits ( 2 ) for the July 4th TenTec 20 meter net..

John, I grew up in a small town where Christian values, Honor, and a man's word and handshake meant something. We'd give a hand up but not hand outs... you worked and earned what you received. I may be old fashioned, but I'll pass on the TenTec Net Check-in credits for now. There will be better times, better conditions, for good contacts, and when I look in the mirror, I'll know I did it right.

Brother Gary, thank you so very much for your response. In the light of your Christian values, I can truly understand where you are coming from. It is so refreshing to hear someone take their stand for the Lord in these perilous times, when those who lack faith and values want to get all they can and can all they get.

I was raised in a good Christian home but in my teen years became the prodical son, who wandered far away the the paths of righteousness. As a teen ager I was a professional rock musician and hung with the wrong crowd. But, do to the fervent prayers of my righteous mother, I accepted the Lord Jesus as my personal Saviour and gave up the rock scene along with the crowd that was tearing my life apart. My so called friends told me that they would give me 2 weeks to "get over my religious honeymoon" and I am happy to report that 56 years have gone by since and I have never looked back!

On my QRZ page you will see a link for SoundCloud, where you can here many of my original gospel songs that I wrote, sang and recorded. You will see one of my favorites called, "I Remember Mother's Prayers" that I wrote in 1967.

Brother Gary, to make a long story short, I have honored your request and have removed your checkins from July 4th. Thanks again....you made my day!

Brother John (my brothers and sisters in the Lord call me John the Baptist)

I know blaming Washington is popular, but due to powerful corporate lobbying -- rules, regulations, and taxes are less restrictive today than they have been in decades.

<mailto:k3ur@...?subject=Re%3A%20A%20MESSAGE%20FROM%20THE%20ten_tec_radio_net%20Group%20Moderator> "John Occhipinti" occhipintijohn

Because of the questionable and unpopular decisions that polititions in Washington have made, most businesses have had to modify the way they do business. Rules, regulations, excessive taxes and other "noose tightening tactics" have made it necessary to down size and cut expenses, while still being able to keep their heads above water.

Most of you already know that business decisions have also precipitated changes at TEN-TEC Inc. and one of these decisions was to stop producing the Orion II. On the brighter side, repairs and "software updates" will continue for both the original Orion and the Orion II.

TEN-TEC is a company that has always been on the cutting edge of technology and will continue to operate with the integrity that has made them one of the most popular Amateur Radio manufacturers and one that has gained the respect of its customers through outstanding customer service and the best warranties in the Amateur Radio business.

TEN-TEC Inc. will continue the Certificate Program, which includes the 10 Checkin Certificate, the 25 Checkin Silver Certificate and the 50 Checkin Gold Certificate. Anything else that was in the discussion mode, is still being negotiated. Unexpected things in life and especially in businesses require changes and these unexpected things that arise are directly caused by the very things that I opened this message with.

Yes, politics and religion are not taboo on the ten_ten_radio_net Group and as long as civility is maintained, people are free to comment pro or con. If there are any questions about the TEN-
TEC Certificate Program, please send them directly to
<mailto:k3ur%40att.net> k3ur@....

The Net Control of the TEN-TEC SSB nets wants everyone to know that the nets will be in operation tomorrow (Sunday) at the usual times. Thank you.

I agree here to a point but I'm not too sure about TT engaging in "powerful corporate lobbying". I'm no expert in these kind of things but TT probably meets the legal definition of a small business and life is getting tougher for small businesses all the time. IMO, powerful corporate lobbying combined with excessive government meddling are, in large measure, responsible for this trend.

Hi Bill, first of all I want to thank you for using your Amateur Radio Callsign when you posted on the ten_tec_radio_net Group today. When I started the ten_tec_radio_net Group, I did not put any restrictions about what people could post. It is axiomatic that a person would put his or her Amateur Radio Callsign after their posting. I believe that this should be a requirement.

I will take this opportunity to answer the easy question that you asked. Of course the answer is

W A S H I N G T O N.

Thank you for checking into the 20 meter net today. You had a big signal coming from Arizona today.

John, I have held membership in a number of forums over the years that started out with no restrictions on subject content. It didn't take long before the flame wars started and it became necessary to avoid certain subjects. It got ugly sometimes.

One thing we all share as people is passionately held beliefs and opinions. No problem as long as we treat each other with civility and respect. Unfortunately, some people can't or won't.

Bill AE7KB

# 544. Group Restrictions? Why are they needed?

Just like Ivory Soap... 99.44% of the people here, treat this group as if they are on the air. Politics, Religion and Drunks are never a good thing for Ham Radio nor large newsgroups. Someone always gets their feelings hurt. Sorry to have been away for a while but, due to illness and such. I had to be gone for a while. It sure is great to be back. And after todays Net results are in, looks like I only need One check-in next Sunday to make 25 !!! I already have the document frame. My minds eye already sees it hanging on the wall. I got into the 40 meter net Barefooted to N2KPC ... Wow, those Force 12 Antennas must be great because my 40 meter antenna sure is lousy. Thank You Sir... 40 is never a problem to John because we are only about 250 miles apart but, New Jersey during the day on 100 Watts and a Lousy Antenna! Plus, Bad Static. That's just Awesome.

TEN TEC DREAMS by KC2QMA

An area that I think Ten Tec might improve is in the User Interface. They already make one of the best receivers on the market so to me designing a transceiver combining the two would create a true state of the art "Super Transceiver".

The User interface of all Ten Tec rigs have traditionally been very simple with very few buttons, knobs and menu screens like the Omni VI, Eagle and many other transceivers even the Orion II is very basic as compared to a few of the Import transceivers. In one respect you could say that the simple user interface on Ten Tec transceivers is a good thing because it's easier to learn but with today's low cost graphics displays and fast CPU's it is a waste not to take advantage of today's latest technologies.

Many of us now have a Smartphone's and these products fit in our pocket and can handle Audio, Video, telecommunications and Intense Data Processing. Some of these Smartphone's are running at speeds over 2 GHz and work just fine in an RF environment it having Wi-Fi and cellular transmitters.

I think taking some of the technology from the Smartphone and use it in a transceiver might be the best and most cost effective way to build a "Super Transceiver". First thing is utilize the latest processors these are low cost, small and are designed to consume very little power and the fast clock speeds of today's CPU's would make DSP intensive tasks like Noise reduction, Noise blanker and many other DSP tasks super fast and opens the door for some amazing opportunities in receiver signal processing performance. Next use the latest GPU (graphics processing unit).this will allow very Hi Speed / Hi resolution graphics to be displayed. Hi speed pan-adapter, audio scopes, and graphics for digital modes and more would now be possible.

Now with Ten Tec's years building amateur radio this combination of CPU speed & Hi resolution graphics would in my opinion wipe out the competition and it could be made in the USA and still be priced very competitively due to low cost to build the component boards.

THE BIG IDEA

The big task would be writing the software. Ten Tec can write its own OS and software and this would give Ten Tec more control over the product but could take too much time to develop the software and cost too much. Or Ten Tec could design the transceiver around the Android Operating system which is already highly developed and supported OS that would open up the world to writing app's for it and maximum hardware

compatibility?

THE DREAM

What I see is something like the Ten Tec Orion of the future?. A standalone desktop transceiver with this combination TT's receiver technologies and the latest CPU technology to make the ultimate "Super transceiver"!

I still like having direct access to buttons and knobs for quick control of the rig so let's dream a little ..

Let's call it the Ten Tec "STRATUS I". Just trying to stick with the TT naming theme Hi Hi.

It would be in a 19" rack mount compatible chassis but rack ears can be removed for desktop operation.

It would have an 8" to 10" Touch capable 16:9 aspect color video display.

It Would Have: USB ports, SD Memory slots, Bluetooth, Wi-Fi, XLR Mic input, 100W built In RF amplifier and all of the standard connections found on other rigs.

Because the transceiver is built around the android OS, apps can be installed to add many new features and allows the user to customize it to their needs. First thing is it will have the best looking touch screen found on any transceiver to date. Would also allow third party software developers to create software "Apps" for it. For example the CW enthusiasts one could purchace a CW decoding program with full waterfall display and other graphics or a program that allows for sophisticated signal processing of the receive audio and an endless amount of other new features could be added.

Ten Tec would have design a new proprietary CPU board and write the hardware and Android OS Bridge code to connect the OS to the transceivers hardware (Front panel knobs and buttons and other I/O functions like ant relays, T/R control band switching and others.)

Now all this sounds like a transceiver that would very expensive right? I don't think so. How much is the most expensive Smartphone or tablet these days $500 $800? I think that it could be possible to make a transceiver like this in the USA for a very reasonable price utilizing existing technology. And because the hardware design is modular like in most Ten Tec rigs like in the Orion, Hardware upgrades and add-ons would be possible for years. And because the software APPS can be developed by Ten Tec and third party developers the possibilities are endless. This would also make a transceiver platform that would have a long service life. It's still a standalone rig and would still have that BIG VFO know feel we know and love but with so much more!

Anyway Just another one of my "Ten Tec Dreams"

Or use the distributed processing concept used by Bell Labs in their 8086 processor C++ PBXs of the 1980s and 90s: a motherboard and daughter-boards all running the same OS on the same processors, but with the daughter-boards being tasked with specific operations; for example individual daughter boards for audio DSP, user interface and CAT control, clocking and frequency generation, RX operation, TX operation, etc.. Something along the lines of Arduino or Raspberry PI which may be hacked or modified. This is a concept which the new TT Rebel is based on. Maybe a full featured 100 W transceiver platform with a sub-receiver, A/B VFOs, etc.

I believe the key to success is the motherboard control software which will accept a minimum and maximum number of daughter-board configurations and I/O; the motherboard OS may be proprietary but daughter-board OS open source as long as certain requirement were met.

From: oldlongbeard
Topic: 548  Message: 548

I checked into the 40M Net yesterday with my Model 540, which, I believe, was discontinued some time around 1979. By gosh, it's still working, and the mother ship can still send me a dial cord, or PTO kit if I need one!

Keep it simple... I agree. If I could add one feature to the old 540, it would be some sort of I.F. Shift. (Notch is handled well by the DSP Speaker attached to her.)

Still loving the older Ten Tec rigs up here in Michigan. Had a Jupiter for a while recently, but it just wasn't my cup of tea.... glad we all have different tastes/wants/needs.... else all but one radio company would be out of business.

Now all this sounds like a transceiver that would very expensive right? I don't think so. How much is the most expensive Smartphone or tablet these days $500 $800? I think that it could be possible to make a transceiver like this in the USA for a very reasonable price utilizing existing technology. And because the hardware design is modular like in most Ten Tec rigs like in the Orion, Hardware upgrades and add-ons would be possible for years. And because the software APPS can be developed by Ten Tec and third party developers the possibilities are endless. This would also make a transceiver platform that would have a long service life. It's still a standalone rig and would still have that BIG VFO know feel we know and love but with so much more!

Anyway Just another one of my "Ten Tec Dreams"

Ten Tec should abandon one of their main selling points? A more complex user interface, at least for me, doesn't automatically translate to improvement.

> Some people want a radio to communicate.
> Some people want a radio to play with gimmicks and gadgets.

IMO, TT should keep the R&D budget focused on better RX, TX and DSP rather than gadgets and buttons most Ten Tec fans don't want or need. I'm at a point in life where being called old-fashioned and set in my ways is considered complementary. I don't even know what half of the things mentioned in the original post are. That's my failing and I'll own up to it. To each his own. Thanks but no thanks.

John, thank you for sharing your dream radio with the Group. Many of the modern inventions were brought to fruition by dreamers who were called many derogatory names.

They did not get discouraged and today we have the light bulb, thanks to Edison, who often was called crazy. The Wright Brothers were laughed at and mocked, but refused to give up.

I can go on with more examples of dreamers who refused to give in to the nay sayers of their day.

We can dream together for a new technilogically advanced radio emanating from Sevierville, Tennessee.

I know, Ralph.

I am perfectly happy with him having his dream. I hope he gets what he wants.

I just want to make sure Ten-Tec understands that other people's dreams are completely different.

The Eagle was created as a simple, low cost, high performing radio with minimum bells and whistles, for people who just like to use the radio.

If we want more, we can run N4PY software with it, etc.

Many of us want this type of radio. We are very thankful we have it.

Dream all you want, but leave your complex cr@p out of my Eagle please.

Keep it simple, stupid.

The more complex, the more likely to break in a contest, or on an expedition.

What you have described seems to me like technology for the sake of technology.

I don't want technology unless it buys me a clear improvement in my ability to communicate, not my ability to play.

For many of us, the Eagle was spot on.

Some people want a radio to communicate.

Some people want a radio to play with gimmicks and gadgets.

Please don't try to marry these two worlds!

TEN TEC DREAMS by KC2QMA

An area that I think Ten Tec might improve is in the User Interface. They already make one of the best receivers on the market so to me designing a transceiver combining the two would create a true state of the art "Super Transceiver".

The User interface of all Ten Tec rigs have traditionally been very simple with very few buttons, knobs and menu screens like the Omni VI, Eagle and many other transceivers even the Orion II is very basic as compared to a few of the Import transceivers. In one respect you could say that the simple user interface on Ten Tec transceivers is a good thing because it's easier to learn but with today's low cost graphics displays and fast CPU's it is a waste not to take advantage of today's latest technologies.

Many of us now have a Smartphone's and these products fit in our pocket and can handle Audio, Video, telecommunications and Intense Data Processing. Some of these Smartphone's are running at speeds over 2 GHz and work just fine in an RF environment it having Wi-Fi and cellular transmitters.

I think taking some of the technology from the Smartphone and use it in a transceiver might be the best and most cost effective way to build a "Super Transceiver". First thing is utilize the latest processors these are low cost, small and are designed to consume very little power and the fast clock speeds of today's CPU's would make DSP intensive tasks like Noise reduction, Noise blanker and many other DSP tasks super fast and opens the door for some amazing opportunities in receiver signal processing performance. Next use the latest GPU (graphics processing unit).this will allow very Hi Speed

/ Hi resolution graphics to be displayed. Hi speed pan-adapter, audio scopes, and graphics for digital modes and more would now be possible.

Now with Ten Tec's years building amateur radio this combination of CPU speed & Hi resolution graphics would in my opinion wipe out the competition and it could be made in the USA and still be priced very competitively due to low cost to build the component boards.

THE BIG IDEA

The big task would be writing the software. Ten Tec can write its own OS and software and this would give Ten Tec more control over the product but could take too much time to develop the software and cost too much. Or Ten Tec could design the transceiver around the Android Operating system which is already highly developed and supported OS that would open up the world to writing app's for it and maximum hardware compatibility?

THE DREAM

What I see is something like the Ten Tec Orion of the future?. A standalone desktop transceiver with this combination TT's receiver technologies and the latest CPU technology to make the ultimate "Super transceiver"!

I still like having direct access to buttons and knobs for quick control of the rig so let's dream a little...

Let's call it the Ten Tec "STRATUS I". Just trying to stick with the TT naming theme Hi Hi.

It would be in a 19" rack mount compatible chassis but rack ears can be removed for desktop operation.

It would have an 8" to 10" Touch capable 16:9 aspect color video display.

It Would Have: USB ports, SD Memory slots, Bluetooth, Wi-Fi, XLR Mic input, 100W built In RF amplifier and all of the standard connections found on other rigs.

Because the transceiver is built around the android OS, apps can be installed to add many new features and allows the user to customize it to their needs. First thing is it will have the best looking touch screen found on any transceiver to date. Would also allow third party software developers to create software "Apps" for it. For example the CW enthusiasts one could purchace a CW decoding program with full waterfall display and other graphics or a program that allows for sophisticated signal processing of the receive audio and an endless amount of other new features could be added.

Ten Tec would have design a new proprietary CPU board and write the hardware and Android OS Bridge code to connect the OS to the transceivers hardware (Front panel knobs and buttons and other I/O functions like ant relays, T/R control band switching and others.)

Now all this sounds like a transceiver that would very expensive right? I don't think so. How much is the most expensive Smartphone or tablet these days $500 $800? I think that it could be possible to make a transceiver like this in the USA for a very reasonable price utilizing existing technology. And because the hardware design is modular like in most Ten Tec rigs like in the Orion, Hardware upgrades and add-ons would be possible for years. And because the software APPS can be developed by Ten Tec and third party developers the possibilities are endless. This would also make a transceiver platform that would have a long service life. It's still a standalone rig and would still have that BIG VFO know feel we know and love but with so much more!

Yes remember this is a fictional rig and does not exist.
And I also agree there should always be a simple and powerful rig just like the Eagle.
-
But just keep in mind most of the other big names is radio have already started down this future path with better interfaces. This is the future like it or not, we used to go down to the local library for information now we have a super powerful computer on our desk that connects to the internet and the world. There is probably 500k times the possessing and storage power in your pocket Smartphone then NASA used to put a man on the moon. So why wouldn't you use this to our advantage?
-
The beauty of this technology is that all of this would not just be a pretty colorful screen. it is to take advantage of today's fast CPU's to enhance things like. Better receive audio with advanced Noise reduction, Noise blanker, Notch and filtering. Also with the large color touch screen everything would be easy to control and see as well as providing the capabilities of Built it Digital mode decoder software featuring water fall displays.
-
Now I know many hams want nothing to do a sophisticated rig like this but just remember there are others who do Hint: Kenwood TS990, Icom 7600, Yaesu FTDX 1200-3000 and then there is the flex systems all of these are selling well for what they cost.
-
There is no doubt if the receive or transmit is not good none of it matters. But we already know Ten Tec has that covered.
-
Like I said it's just a dream. Sometimes I dream about my old Hammarlund SP-600 and I wake up with a smile on.

I□m with you on the SP-600, John.

I loved that radio. Liked it even better than the Collins R-390.

BTW, don□t get me wrong. I□m not against radios with bells and whistles.

There is room for all of them.

My experience has been, the more complex radios were, the more often they break.

This is especially true with linear amplifiers.

That□s why my contest rig is an Eagle and an old amp with 3-500z WITHOUT any fault protection.

If I can ever afford it, I want to buy an SDR transceiver like a Flex, but my budget looks more like it will be a Rebel.

Topic: 555  Message: 555

Hi to all Ten-Tec users.

I have an OMNI VII and an Eagle, both with the AT. The OMNI VII is more versatile but the Eagle is quieter and has a better NB, even if you have purchase it as an option....It should be a standard control on a $2,000.00 radio.

My first Ten-Tec was a Delta II and it was not much larger than the Eagle. What I liked about that radio was the ability to have direct frequency and band input. The Eagle is a step backwards as far as band access is concerned. I would like to see an external keypad offered for the Eagle as with the OMNI VII and the Jupiter.

For me, this would make my Eagle soar.

Greg,

If you look back in the ARRL handbooks, back in the late 70s and early 80s, there was a circuit description for adding an outboard I.F. shift to any radio.

It basically used a crystal oscillator, and a mixer to move the signal to another I.F. frequency.

There it had a Xtal filter on the IF, and then mixed it back to the original 9MHz again.

The oscillator was tunable, so you could shift the IF up or down.

Was a pretty simple, yet effective circuit, much like Ten-Tec later implemented in newer rigs.

Subject: [ten_tec_radio_net] My Ten Tec was discontinued!

I checked into the 40M Net yesterday with my Model 540, which, I believe, was discontinued some time around 1979. By gosh, it's still working, and the mother ship can still send me a dial cord, or PTO kit if I need one!

Keep it simple... I agree. If I could add one feature to the old 540, it would be some sort of I.F. Shift. (Notch is handled well by the DSP Speaker attached to her.)

Still loving the older Ten Tec rigs up here in Michigan. Had a Jupiter for a while recently, but it just wasn't my cup of tea.... glad we all have different tastes/wants/needs.... else all but one radio company would be out of business.

Yes rick the SP-600 audio can not be beat it's still the my receiver for AM work and SWL.

I think there will always be a simple straight forward rig like the Eagle from Ten Tec. And the Orion/II was Ten Tec's offering of extreme transceiver performance and a more advanced DSP based system with advanced interface.

So this fictional rig I call the "STRATUS I" would be the next breakthrough product from Ten Tec.

Setting the next standard in amateur radio.

John,
I have wanted to thank you for all that you do to help make the TT net more listening friendly. I do however think that better is in the eyes of the beholder. Take Windows for example.
Best regards and keep up the good work.

Yes remember this is a fictional rig and does not exist.
And I also agree there should always be a simple and powerful rig just like the Eagle.
-
But just keep in mind most of the other big names is radio have already started down this future path with better interfaces. This is the future like it or not, we used to go down to the local library for information now we have a super powerful computer on our desk that connects to the internet and the world. There is probably 500k times the possessing and storage power in your pocket Smartphone then NASA used to put a man on the moon. So why wouldn't you use this to our advantage?
-
The beauty of this technology is that all of this would not just be a pretty colorful screen. it is to take advantage of today's fast CPU's to enhance things like. Better receive audio with advanced Noise reduction, Noise blanker, Notch and filtering. Also with the large color touch screen everything would be easy to control and see as well as providing the capabilities of Built it Digital mode decoder software featuring water fall displays.
-
Now I know many hams want nothing to do a sophisticated rig like this but just remember there are others who do Hint: Kenwood TS990, Icom 7600, Yaesu FTDX 1200-3000 and then there is the flex systems all of these are selling well for what they cost.
-
There is no doubt if the receive or transmit is not good none of it matters. But we already know Ten Tec has that covered.
-
Like I said it's just a dream. Sometimes I dream about my old Hammarlund SP-600 and I wake up with a smile on.

Thanks Ralph,
It's my pleasure. I'm just glad to be part of this net and to own a great American transceiver. Nothing Beats A Ten Tec!

This group has some of the nicest people and some Real Ten Tec Fans.
I have owned my Orion II for almost 2 years now and I find it to be the best receiver I have ever heard or owned. I also like the color screen and the band scope. Is it perfect? No but nothing ever truly is.

I also agree that there should always be a simple HF rig with no frills but real performance available for those who don't need or want the bells and whistles.

Now don't get me wrong I love just about anything with a tubes in it especially liner amplifiers I feel tube HF amps produce better sounding modulation. And analog vacuum tube technology in some areas is still better than digital. But I also love the cutting edge of technology as well.

John, I can only dream of having dream like Edison and the Wright Brothers. Those were real pioneers in thinking as well as there life!

Just like the old song goes "Dream a little dream with me"

KC2QMA

Rick- I think I found it in the 1977 ARRL handbook. It is a circuit called "A Band-Pass Tuner for Adjustable Selectivity" and it appears to operate just as your explanation. I may actually tackle this some day!! Thanks for the tip. There are times, when the old 540 gets turned off, and a newer rig comes on, just because of the inability to reduce the "side splatter" from nearby (in frequency) operators who have strong signals at my location. I have yet to hear audio that is smoother, and more pleasing to my ear than that emanating from the 540/Triton series of radios. Even the awful T-storm static on low bands in the Midwest isn't so objectionable.

Again, thanks, and if I find time to tackle the mod will surely post results to the group. (I know it would be easier to buy a Corsair, but not nearly as much fun!)

I agree with Rick and believe in the KISS method. I think the Eagle is a great balance of size, performance and features. Everyone has their own needs and opinion, though and that's fine. I don't own an Eagle yet, but I plan to buy one in the near future.

I also think it's interesting to note that the Tritons and original Omnis had single 9mHz IF's and the Eagle takes the design to "modern" standards with updated features. And that's probably too general a statement.... Some of the other manufacturers are building "down conversion" rigs, must be something to that.

Leo,
I'm with you. A keypad would be a welcome addition. It would seem to me this would be easy to accomplish, with existing hardware. Also a firmware change to give you more control over the SSB transmit audio.

As for the views of John, and others on the Dream Ten Tec, I'd say you will get your wish, sooner or later. But as far as keeping it simple, as Greg and Rick have discussed, I know Ten Tec fairly well, and I know that they are conservative enough to insure the new designs are well received by as many people possible. This means there will always be a higher end (in terms of performance,....not necessarily price) offering for those who desire a full feature, but simple to operate rig. However, in order to expand their market, and target younger more tech savvy hams (or would be hams...we hope), John's ideas are spot on, and I think TT knows this.

I think they also have seen what has happened with FLEX, and want to make sure that mistake is not made. The mistake being a rig beyond the means of the majority of hams. Yes they still offer the little 1500 (I have one), 3000 and so on, that are within most hams means, Flex has stepped into what I call the "high dollar" relm. At least one friend of mine has lamented that since Flex put so much effort into the new rigs, he's unsure that Flex will make it. And Flex has failed to address the firewire requirement in the 3000 rig and up. With the proliferation of laptop computers, it makes it a near necessity to run your software, rig control and so on, via a desktop computer! Yes, there are a few laptops with firewire ports...but they are quite expensive. So, ... to sum up, TT has some important decisions to make.

I do think Johns ideas have much merit. A radio as he describes, say with a 10 inch touch screen, has much utility. The box size, in total would be certainly manageable, for most of us, and selling price point should compete well in the $3000 to $4000 price range. At the lower end of that range, I see a rig being very competitive.

Best Wishes to all, Sorry for so long a rant!
Dave
W9cmd

PS,...I am a TT Ambassador and wish to disclose that to all. Some of the reflectors now require this disclosure. The Omni VII is my main rig in the shack. I love it!!

>
> My first Ten-Tec was a Delta II and it was not much larger than the Eagle. What I liked

about that radio was the ability to have direct frequency and band input. The Eagle is a step backwards as far as band access is concerned. I would like to see an external keypad offered for the Eagle as with the OMNI VII and the Jupiter.

Dave,

The problem I see with a lot of the SDR transceivers and receivers is, they require a very hefty computer to run them.

So when we are looking at the price of the radio, we also have to add in the cost of a dedicated computer because you probably won't want to tie up your main computer running the radio. In fact, sometimes I enjoy getting on the air without switching the dedicated ham computer on.

Help me out a bit, why do you see a necessity to deploy firewire?

We have had serial in our radios for a long time, now rigs have USB and and even NIC. Why firewire? For the iPhones?

Firewire is older than USB and it hasn't managed to become mainstream yet.

What is going to change in the future that makes firewire pervasive?

Why should Ten-Tec waste engineering $$$ on deploying a non-mainstream technology?

I'm not against I1394, it is a good standard. I just think it never really made it to mainstream.

BTW, I have it in this laptop for running backups because USB3 was not available at the time I bought this computer.

Of course I also run network backup to my NAS, but I prefer to be on the safe side and Firewire is fairly fast local backup media.

Rick,
SDR rigs are amazing and do require a powerful PC and they also have a place in ham radio. Imagine a new Ten Tec "Pegasus II"? Fully integrated Transceiver with built-in 100W RF amp, Built in computer with dual DVI video out's, built in Audio Interface, Connections for Keyboard, Mouse, Ethernet port, WI-FI, Speaker outputs And all other standard connectors. The "Pegasus II" Would be a turnkey "Ultra SDR" System. Just connect 2 Video monitors, Keyboard, Mouse, MIc & antenna and you are on the AIR. SDR Style!

Here I go again Dreaming. Hi Hi
KC2QMA

John, I see you are enthused by such frills.

Imagine my Eagle.

Just connect P.S., antenna and mic or key and I'm on the air.

I can hear and work anything that anyone else can.

Here is what NOBODY has managed to tell me yet: what does any SDR offer to help me improve my score in a contest?

I guarantee you that if you start playing with those bells and whistles during the contest, you'll get your behind stomped by the average contest novice.

People talk about all of the features which help them pull a signal out of the band garbage.

The poor Eagle has only one such feature: the VFO. You just tune it to the frequency and hear and work the station, while all the others are twisting knobs, rolling mouse scroll wheels and double-clicking.

I'm not convinced. Sorry.

Now if you're not a contester and enjoy playing with bells and whistles, then I understand the enthusiasm, but I remain convinced that it is not a help in a contest.

Of course I use the computer in the contest as well, running contest logging software and showing me band maps to double click multipliers.

Since I began using that, my scores have gone up considerable in contests.

Anyway, our hobby has many aspects but I don't see the SDR ever becoming a contest radio.

Rick,
SDR rigs are amazing and do require a powerful PC and they also have a place in ham radio. Imagine a new Ten Tec "Pegasus II"? Fully integrated Transceiver with built-in 100W RF amp, Built in computer with dual DVI video out's, built in Audio Interface, Connections for Keyboard, Mouse, Ethernet port, WI-FI, Speaker outputs And all other standard connectors.
The "Pegasus II" Would be a turnkey "Ultra SDR" System. Just connect 2 Video monitors, Keyboard, Mouse, MIc & antenna and you are on the AIR. SDR Style!

Here I go again Dreaming. Hi Hi
KC2QMA
John

My favorite rig to use is still my DRAKE TR-4. Of course there are situations that it cannot handle and then my Orion which is my best rig becomes my primary player. Like the Eagle, the Orion's primary receiver at least, is simply outstanding.

I keep looking at my TR-4 and wonder how well a complementary (not a replacement!) Eagle would sell if it was retro-styled into something that looked similar to (not exactly-probably gets messy legally) a DRAKE or pic another old brand/model classic with spacious panel and large knobs. Room in the back could be utilized for a built in power supply (or buyers choice of pwr supply?) and a killer speaker too but otherwise change nothing about the Eagle. For what buttons on the Eagle that could not be changed to a rotary switch such as "BAN", and "PWR" in place of "RF TUNE" and NB logically controlled by the BLANKER knob for example, a flip up panel on the top of the rig for all of the other few buttons would be handled there. Digital S-Meter where the S-Meter is now, but perhaps some effort to make it look like an old analog meter with LCD that has white background and a black needle (in lieu of Red for cost reasons). RF and SWR in place of Plate Amperes.

Maybe a crazy idea and perhaps cost versus sales would not pencil out. Call it the old farts radio, hi hi but it might be big a hit? Still simple/to the point! Just an alternative package for the otherwise nifty existing Eagle. If it was a hit, then perhaps a future production of a Station Console, Wattmeter, etc. could add to the line and still keeps the rig simple, or customers can connect their computers as they can now to wring out whatever complex thing(s) they want the rig to do.

Gene, if we put the Eagle in a larger box, let's at least add a few more filter slots so that we can also install the AM and FM filters.

Be sure we get a real analog S-Meter.

Also, if you want to turn the clock back that far, why stop with the Drake TR-4?

I was in love with the Drake 2B back in the late 50s and early 60s.

Most people dreamed of it back then.

In fact everyone even considering a new RX at the time, had to answer that age old question:

2B or not 2B?

Rick- funny- those are the 2 things I was just going to post as my changed Criteria for the "New Rig- Old Box" Radio! My vote is to allow us to use our Omni VI box..... I think it is still one of the most beautiful rigs ever made. And since it has been discontinued for about 20 years or so, there can't be any that are still working, right??? :-)

My Omni VI+ quit working for me about 3.5 years ago (the day I sold it).

The size is pretty much the maximum I have room for.

I would prefer a rig the size of the OM7.

The truth is, in a contest I have no time to play with anything and when
I'm not in a contest, I run N4PY software and have a 15" display (laptop).

So it really poses no problem anyway. Just wish I didn't have to manually
swap filters when I want to listen to AM.

Don't think I really need FM.

# 572. TEN-TEC 40 METER & 20 METER NET RESULTS JULY 7, 2013

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-07-10 16:49:21 UTC
From: John Occhipinti
Topic: 572  Message: 572

The TEN-TEC 40 meter net was held this past Sunday at 19:00 UTC on 7.261 with 88 people checking in and the TEN-TEC 20 meter net followed at 20:00 UTC on 14.325 with 74 people checking in.

Congratulations to the 5 people who qualified for the TEN-TEC 10 Checkin Certificate:

1.KC8HXO Greg MI
2.N2KPV Ben NJ
3.N8OXC Chris OH
4.WV8MRT Bill WV
5.KF5APN Gilbert MS

Congratulations to the 1 person who qualified for the TEN-TEC 25 Checkin Silver Certificate:

1.WD8BOU Ed OH

Congratulations to the 5 people who qualified for the TEN-TEC 50 Checkin Gold Certificate:

1.KC2QMA John TN
2.VE3DWI Tony CN
3.KI4YOB Douglas FL
4.KY4OZ OZ KY
5.KC4FL John FL

The new Certificate Data Base has already been uploaded to the FILES section. Please check your names, callsigns and total checkins for accuracy. Thanks to all for your patience, as I was away for several days.

If all goes well on Sunday July 14, 2013 or next Sunday. My quest for 25 check ins will be achieved. I got off to a really good start and then had some health problems. I again want to Thank John, and all involved with the Ten Tec Net for the Great job they are doing. Then it will be on to the magical check in number 50. I don't care if the mystery prize is a lollypop! I want that Certificate! I have never found a better or friendlier group of people.

Me to. There would is nothing like that on the market today. And I think it would sell well.
The Goal would be to make it look and feel retro but still be very high quality. With matching retro front panel knobs and a weighted VFO that feels "Real" not cheap.
since you can not eliminate the LCD maybe give the LCD a amber glow or something. Try to include an analog S-Meter and just for goodness sake a matching Retro speaker called the "Hawk-Voice"? and power supply the "Hawk Power". Wow a whole Ten Tec "Hawk-Line"!

Question: What case style would be the most popular to emulate not copy? Drake, Heathkit, ,Collins or Ten Tec could come up with thare own retro design maybe that emulates a vintage Ten Tec rig like the old Omni-D, Corsair II or I think an oversized case like the old "Century 21"?

Hi Rick, I've been away. Sorry for the delay in responding. Firewire is not my choice, to the contrary. I've had discussions with FLEX in this regard. I've asked why not USB 3.0 or utilizing the RJ45 or the HDMI port....anything but firewire. Plus, you are right, if you don't have at least a higher Core I3, you have problems. Of course, you cannot get a firewire laptop without getting at least a I7 processor, and will pay over $1000 for it. In short, its FLEX that has the problem, and this is recognized by many other FLEX owners. The little 1500, which I own, is USB. But jump to the 3000 to get a 100w rig, and now its firewire only. Serial port? Nope they won't consider it, as its not fast enough to run the software.

Hope that answers the question.

And yes, SDR does take some horsepower, depending on the radio to run. An older xp laptop with a Pentium, may not get the job done. Again, depends on the software to run the rig.

Rick,
PS....If I have to buy a clunky desktop to be able to run a FLEX 3000 or higher, then I won't be using one. If I cannot run a SDR rig from my laptop, then I won't be buying one.

Sorry if I had missed my point in my original rant.

But you must admit, that technology will drive future rigs, and in order to attract younger hams, ....my other point,...you need to marry the computer to the radio.

I do like the idea of a retro rig, using the guts of an eagle. This is something us old farts would enjoy, I'm sure.

I do find it somewhat challenging to keep up with the technology. That's why I purchased the FLEX 1500. The most difficult part of one of these is setting it up to run correctly. Once done, its really fun to watch all the action across the band.

# 579. RE: [ten_tec_radio_net] Re: TEN TEC DREAMS (Retro pkg based on Eagle)

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-07-11 18:32:48 UTC
From: Rick - DJ0IP / NJ0IP
Topic: 545  Message: 579

Nah John, the matching speaker won't be called "Hawk Voice"; Let's call it "Hawk Talk".

The S-Meter will be called "Hawk Eye".

"Hawk Power" is ok for the PS.

For the case, well as I recall there was a version of the old Hallicrafters S38 that was mounted in a wooden (Oak) cabinet.

That's what I want.

Subject: [ten_tec_radio_net] Re: TEN TEC DREAMS (Retro pkg based on Eagle)

Me to. There would is nothing like that on the market today. And I think it would sell well.
The Goal would be to make it look and feel retro but still be very high quality. With matching retro front panel knobs and a weighted VFO that feels "Real" not cheap.
since you can not eliminate the LCD maybe give the LCD a amber glow or something. Try to include an analog S-Meter and just for goodness sake a matching Retro speaker called the "Hawk-Voice"? and power supply the "Hawk Power". Wow a whole Ten Tec "Hawk-Line"!

Question: What case style would be the most popular to emulate not copy? Drake, Heathkit, ,Collins or Ten Tec could come up with thare own retro design maybe that emulates a vintage Ten Tec rig like the old Omni-D, Corsair II or I think an oversized case like the old "Century 21"?

Maybe we should save the "Hawk Talk" for the newsletter?
as is in "Where can I get the latest copy of the Hawk Talk monthly"

Topic: 555  Message: 581

See below.

But you must admit, that technology will drive future rigs, and in order to attract younger hams, ....my other point,...you need to marry the computer to the radio.

Marrying the computer to the radio means using it for the user interface; that's OK.

What I don' t buy into is the need for it to contribute part of the horse power for getting the job done.

The bulk of the workload (number crunching) must take place in the radio.

I should be able to run the user interface on my Android (wouldn't own an iPhone).

This is the current disconnect. Flex and others have to realize that. Recently a really high performing SDR RX announced here in DL. It is indeed good, but it is recommended to have a dual core processor with 2GHz+ of power to run it. SORRY. NOT!

I do like the idea of a retro rig, using the guts of an eagle. This is something us old farts would enjoy, I'm sure.

I do find it somewhat challenging to keep up with the technology. That's why I purchased the FLEX 1500. The most difficult part of one of these is setting it up to run correctly. Once done, its really fun to watch all the action across the band.

I wanted to get into the SDR fun with the FLEX 1500 but after reading Rob's comments on the radio, I'll think I'll pass.

See: http://www.dj0ip.de/transceivers/sherwood-xcvr-tests/flex-1500/
(but wait about 15min. I'm just now going to upload the data on this one.)

> Hi Rick, I've been away. Sorry for the delay in responding. Firewire is

not my choice, to the contrary. I've had discussions with FLEX in this regard. I've asked why not USB 3.0 or utilizing the RJ45 or the HDMI port....anything but firewire. Plus, you are right, if you don't have at least a higher Core I3, you have problems. Of course, you cannot get a firewire laptop without getting at least a I7 processor, and will pay over $1000 for it. In short, its FLEX that has the problem, and this is recognized by many other FLEX owners. The little 1500, which I own, is USB. But jump to the 3000 to get a 100w rig, and now its firewire only. Serial port? Nope they won't consider it, as its not fast enough to run the software.

OK...NOW you've done it.....

All this talk about "Retro" and "Hawk" took me back to 80's television, and
a character named "Stringfellow Hawke".

What was the show? *AIRWOLF*
*
*
Now *that* is an awesome name for a ham radio transceiver!!!!!

Reed / WW3A

Topic: 555 Message: 583

I think that SDR's like the flex are in a different class as compared to a standalone rig. My basic idea was to let say combine the state of the art receiver and transmitter technology of Ten Tec with the latest CPU/DSP and user interface into a Table Top/Rack Mount case that has much of the power of SDR's but is all in one. No extra computer needed!

THE TEN-TEC DREAMERS, by K3UR

The TEN-TEC DREAMERS, are speaking loud and clear,
they are dreaming of the day, when they can put it on the air,
a blown up Eagle, in a larger case,
and a 9 inch screen, will help it set the pace,
the wheels are turning, in Sevierville Tennessee,
all of our input, really is the key,
so keep on dreaming, and please do my balk,
we just might see an add-on, and it's called the Hawk Talk!

John, K3UR
Net Control, TEN-TEC SSB NETS

Great poem john that was fast!

Yes sometimes dreams do come true.

KC2QMA
John

OK...NOW you've done it.....

All this talk about "Retro" and "Hawk" took me back to 80's television, and a character named "Stringfellow Hawke".

What was the show? AIRWOLF

Now *that* is an awesome name for a ham radio transceiver!!!!!

Reed / WW3A

John, congratulations on your new TEN-TEC GOLD CERTIFICATE.

I think it's pretty nifty, that you have now reached fifty!

John, K3UR

# 588. Re: TEN TEC DREAMS (Retro pkg based on Eagle)

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-07-11 19:55:45 UTC
From: kc2qma
Topic: 545  Message: 588

Thanks John,
I have the others framed on the wall in my shack and left a space just for the big 50. Look forward to having it in my shack soon.
And thank you john(k3ur), Lloyd(n2kpc)and everyone in the group for making this a great and fun place to be.

KC2QMA
John
73

# 595. NEW RECORD SET ON THE 40 METER TEN-TEC SSB NET

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-07-15 01:49:58 UTC
From: John Occhipinti
Topic: 595  Message: 595

I am happy to report that a new record for checkins was set today (Sunday) on the TEN-TEC 40 meter SSB net, which took place at 19:00 UTC on 7.261. We had 101 people check into the 40 meter net.

The TEN-TEC 20 meter SSB net followed at 20:00 UTC and we had 70 people check in. I also checked in M0GYH Mike in Cheshire, England and WP4NXO Juan in Coto Laurel, Puerto Rico on the 20 meter net.

I will be out of town for a few days and will complete the Certificate Data Base when I return home. Please be patient as I really do have a life outside of Amateur Radio!

Thanks to Lloyd N2KPC for his fine work as the Official Relay Station for the TEN-TEC 40 meter and 20 meter nets and also to John KC2QMA for streaming the live audio over the internet during both nets.

I will post the new Certificate Qualifiers when I return home on Wednesday. Thanks to everyone for supporting the TEN-TEC 40 meter and 20 meter SSB nets and you have made these nets the most popular nets on Amateur Radio! Have a safe and blessed week.

Hello John,
I was able to barley hear you on 20mtrs yesterday. I tried my beam and a groundplane and a dipole but could not hear you very well to know when you asked for check-ins. Thanks to John, KI0MH, in Nebraska for the relay. That was my 25th checkin. Take care of your other life and will look forward to seeing the list.
Best regards,
Ralph Howes

Honestly, my dream rig from Ten Tec would be an updated and somewhat "souped up" version of the venerable Century 21. A smallish rig, CW only, with 100 watts out and a receiver to rival the Hilberling PT-8000.

Yes, I know it won't happen, but this is a dream after all....

I'd be willing to dig deep if the receiver was really that good, though I guess part of the dream is that its being a relatively simple, CW only rig would help keep cost somewhat under control.

Making it CW-only would be a big mistake.

30 years ago you could have gotten away with that.

Today, CW is no longer a part of the requirements for a license.

To be honest, we will be lucky if the OEMs continue to include CW in their new products.

CW only? Not sure about that but I doubt that CW will be removed from any future rigs. CW is growing in popularity despite the no code requirement. More new hams are learning code today than in years. The Code is not going away you can bet on that.

I do think a cabinet that looks like a Century 21 but with the guts of an eagle would be very cool. Especially if you can get the matching speaker and power supply?

If the receiver was good enough, I'll bet a lot of people would still buy it. CW is still the DX mode par excellence and there are still a lot of ops around who operate almost exclusively CW. And one of the things that I like about my Century 21, for example, is precisely the fact that it's CW only. That simplifies everything and it's one of the reasons why the C21 is so much fun. A new rig that could tap into that would have an instant cult following.

# 605. TEN-TEC NET RESULTS & CERTIFICATE WINNERS FOR JULY 14, 2013

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-07-17 04:03:32 UTC
From: John Occhipinti
Topic: 605  Message: 605

The TEN-TEC 40 meter net was held this past Sunday July 14th at 19:00 UTC on 7.261 and set a new record with 101 checkins. The TEN-TEC 20 meter net followed at 20:00 UTC on 14.325 and 70 people checked in.

Congratulations to the new 10 Checkin Certificate Qualifiers:

1.N4USG Robert TN
2.N4DOV David FL
3.WA9JML Steve IL
4.KJ5RV Steve TX

Congratulations to the new 25 Checkin Silver Certificate Qualifiers:

1.KR0K Larry MN
2.W8BVH Ralph OH

Congratulations to the new 50 Checkin Gold Certificate Qualifiers:

1.W1WCI Tim MA
2.W4CM Cecil WV

We also had 28 new people that checked into the nets on Sunday.

Thanks to Lloyd N2KPC in NJ for his usual splendid job as the Official Relay Station for the TEN-TEC nets and also to John KC2QMA in TN for streaming the live audio over the internet during both nets.

I will post the new Certificate Data Base in the FILES section. It is up to date and I encourage everyone to read it and verify that your callsign, name, location and total checkins are correct.

It would be in order for the Certificate winners to post their feelings here and also to send pictures as they hang in your hamshacks, so we all can see them.

The previous winners of the 50 Gold Certificates and the new winners of the 50 Gold Certificates will be receiving them shortly. I am expecting some very interesting comments when you receive them!

Thanks to all of the members of the TEN-TEC 40 meter and 20 meter nets and also members of the ten_tec_radio_net Group. You are all appreciated....we are FAMILY.

The problem with building is, unless you have a lab to test it after it is done, you have no way of knowing if it is performing fully to specs.

# 608. WHERE ARE THE CERTIFICATE DATA BASE PROOF READERS?

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-07-17 16:06:30 UTC
From: John Occhipinti
Topic: 608  Message: 608
Attachments: 1 described; binary payloads are missing from this source WARC

I am presently wearing several TEN-TEC hats, 1 as the Group Owner of the ten_tec_radio_net Group and another hat as the Net Control, TEN-TEC 40 meter and 20 meter SSB nets and another hat as the person who controls and updates the TEN-TEC Certificate Data Base each week. All of this requires a whole lot of hours each week and I am happy to do this.

I had to put on hat #4 today, as I felt the need to "proof read" the entire TEN-TEC Certificate Data Base (all 854 people with Amateur Radio callsigns).

I found 1 duplicate today that obviously has been on-going for several months. K8JHR from MI, was listed 2 times with the names John (8 checkins) and James (7 checkins). I corrected this mistake today by deleting John and adding the 8 checkins to James' 7 checkins for a total of 15 checkins.

Now this makes K8JHR a 10 Checkin Certificate Qualifer and am sending this to Jim Wharton NO4A, Vice President TEN-TEC Inc. today, so K8JHR James, can receive the certificate that he deserves.

The irony of this is that James K8JHR is a retired Lawyer! My aplologies to you James K8JHR for not catching this error earlier.

This is the reason why I have asked and encouraged everyone to read and check the Data Base each week for any errors. If you have noticed, I left the previous week's Data Base from July 7, 2013 in the FILES section. So now you can download this weeks and last weeks Data Base and compare and see that you were credited for your checkins this past Sunday.

I keep getting many personal emails each week asking me about, "how many checkins do I have"? and "did you give me credit for checking in with a relay station"?

All these questions are answered with each weeks Data Base, compared to the previous weeks Data Base. I don't mind answering all of these requests, but most times I am out of town on business and do not have the time to answer these questions as quickly as they are wanted. So, the quick and easy way to find your total checkins is the look at the new Data Base each week.

Wow, it feels good to take off this hat today! In all seriousness, I want to thank each of you for supporting the TEN-TEC nets and also the ten_tec_radio_net Group.

The new corrected Data Base with K8JHR James' 15 checkin totals, is included as an attachment with this posting. Thank you.

# 610. MY DREAM RADIO

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-07-18 01:16:30 UTC
From: John Occhipinti
Topic: 610  Message: 610

My dream radio to replace my Orion II will be the all newly designed SCORPION, which may become TEN-TEC's new flagship radio. This radio will be so far ahead of the competition that there will be a long waiting line to obtain this fine radio.

Standard Features: HF and 6 meters, broadcast and weather bands, variable 5 watts to 200 watts output with built in power supply, CW, RTTY and PSK31, also the fastest and quietest automatic antenna tuner on the market.

2 totally independent receivers with total diversity capability, a 7 inch color TFT screen for real time monitoring activity on the Amateur Bands, XLR plug on the back for the use of studio type mics, also USB, Serial and Lan ports on the back, also connectors for 4 separate antennas.

All roofing filters are standard and the new circuitry will attenuate many of the unwanted interfering signals heared on other radios in this class. 112 dB dynamic range and 105 dB close in dynamic range gives the new Scorpion one of the finest receivers on the market today.

The Scorpion will be so quiet that you will have to check to make sure your antennas are connected to the radio and the estimated price will be between $1K to $2K less than the competition, that wishes their radio would perform like the all new Scorpion!

Just like my friend John KC2QMA, I could also dream of a radio like this. Tell us about your dream radio.

Steve, the problem is, "work" does not mean that it meets all specs.

How is one to know.

You might go through life with the thing being less sensitive than it should be, and not even know it.

I had my K2 built for me by a guy who had a full lab of test equipment.

He delivered it to me with a print out of all of the performance measurements.

I like building kits and would do it again for a QRP rig, but unfortunately I can no longer see well enough to solder SMD components.

Hi Sandor,
Which 4-pin rig are you connecting to? The Traveler has an electret condenser microphone, and as such, will need voltage to operate. Older TT rigs did not have this voltage present at the plug, such as early Corsair's. The later ones do. Since its electret, I suggest a 2k resistor in line with the dc voltage to the element. Also, you must make sure that there is a capacitor in the mic line prior to the mic audio circuitry to block the dc from going back into the radio. If none exists, you must install one. Suggest a 1 microfarad cap. A tantalum cap works great, but most any will do. Not sure if there is room inside the 4-pin connector for both a cap and a resistor. Normally, just the resistor is needed,....provided there is a cap in circuit. Check your rigs schematic. After that its fairly easy to fabricate an adapter.

>Hi Sandor,
>Which 4-pin rig are you connecting to? The Traveler has an electret condenser microphone, and as such, will need voltage to operate. Older TT rigs did not have this voltage present at the plug, such as early Corsair's. The later ones do. Since its electret, I suggest a 2k resistor in line with the dc voltage to the element. Also, you must make sure that there is a capacitor in the mic line prior to the mic audio circuitry to block the dc from going back into the radio. If none exists, you must install one. Suggest a 1 microfarad cap. A tantalum cap works great, but most any will do. Not sure if there is room inside the 4-pin connector for both a cap and a resistor. Normally, just the resistor is needed,....provided there is a cap in circuit. Check your rigs schematic. After that its fairly easy to fabricate an adapter.

My dream radio will have all the features that have been fantasized about the last couple of weeks but be as easy to operate as a Jupiter or an Eagle and will work just as well as a stand alone unit or in conjunction with a computer as well as make coffee, take dictation and change the oil in my truck.

I like the space and planetary theme the best although I don't quite understand how the title "Omni" fits but no matter, as it's gone. I also like the names of the amps produced over the years. I can't object to "Eagle" as that's the symbol of our nation, second only to the flag. Other birds of prey like "Hawk" or "Falcon" are also quite acceptable but my feeling is NO BUGS!

John, are you privy to something from Ten Tec that the rest of us are not? I hope so because it sounds great, except for the name. ;)

I would only dream that there would be a new HF rig in the future. Would also like to see a stand alone VHF/UHF All mode (non fm).  John you have big dreams and they are out of this world ( even the radio names ) but the name of this one is from the desert not the planets.  Hope you are on to something.

I think having a built in coffee maker is probably the most important feature. I guess there will be a slot in the front of the rig to put my Ten Tec Mug in and next to the tune button a button called "Brew". HI HI.

Bill, when you say "symbol of our nation", I have to ask "which nation?"

Actually the Eagle is the symbol of Germany. was so long before America claimed it.

(hi)

Please keep in mind that this is not a US-ONLY group.

Many of our members don't appreciate some of the US patriotism statements here.

God bless the good people of the world, regardless of where they were born!

(my 2c worth)

Allow me to interject a few things about the name Scorpion and possibly this will take the focus off whose country has eclusive rights to the "Eagle".

In my dream, the name of the new HF radio that could possibly be the next TEN-TEC flagship radio was the Scorpion. Some have wondered why a name like this came about, so I have researched and will state a few facts about scorpions that could well pertain to this new "dream radio".

1.The Scorpion has 8 legs, which represents each of the new radios features and benefits.

2.Some Scorpions have up to 10 eyes, which represents the new radios ability to quickly scan the entire Amateur Radio Band and project the data onto the beautiful 7 inch TFT display.

3.The Scorpions tail has a stinger, which represents the new radios ability to quickly attack any adjacent channel interference and splatter and drive it far away from the operating frequency.

4.The Scorpions are a popular musical group from Germany, and the new radio will have the capability to listen to their music via the broadcast band and will easily capture every musical note emanating from Germany.

5.Last but not least, the Scorpion has a flourescent material on their shell, allowing them to glow in the dark and this will give the new radio the ability to not only glow in the dark, but also to easily outshine all of the competition!

This is where the name of the new dream radio came from.

Footnote: When I started taking accordion lessons at the age of 10, I remember playing a song called, "I Dream Of Jeanie With The Light Brown Hair".

Thanks for helping me break the monotony on this reflector!

John,
May I ask if...

When playing the accordion,
You chanced upon a scorpion?

Probably not since if you did, back to Jeanie you'd go—and quickly. As a youngster back in the 40's in Dallas, I remember tumble weed, rattlers and scorpions. These ugly, and I do mean ugly, critters would spend the night in one's boots. Very bold. Of course boots had to be shaken out each morning. As long as this task was diligently carried out, we could say that

There are old scorpions and,
There are bold scorpions but,
There are no old, bold scorpions.

Granted, rattlers presented a different set of precautions, but at least they warned the unmindful of their presence. Bottom line: lose the Scorpion, stick with Jeanie. Or how about the new Ten Tec Genie? Or, in the interest of consistency, Genie I.

As for me, an Omni VIII wrapped in brown paper and tied up with string will be fine I'm sure.

Hi Sandor,
Suggest you check your schematic on the audio circuit. I'm not familiar with the paragon. If there is no cap prior to any IC or semiconductor, then you should add one in line. You don't want any dc on the mic line.
Good Luck,
Dave

Andy, keep your eyes focused as you travel on the concrete jungle this weekend. Make sure you have a good supply of road tar.

After I woke up from that bad dream that I recently had, I was wide awake and visualized a new flagship radio in Tennessee called THE VIPER.

This radio had all of the features of the K990, was a whole lot less money and had a special built-in server for my TEN-TEC mug. As l continued to examine this radio, I saw a built in coffee maker and an alarm clock to wake
us up in time for the TEN-TEC nets each Sunday.

Speaking of the TEN-TEC nets, I will talk to you and the rest of our net members this Sunday.

Bill, I forgot to mention that the all new VIPER has an advanced preamp that enables it to hear subsonic sounds and amplify them and translate them from machine language into human language.

The advanced space-age preamp has a magnetic device that ignores white noise, pink noise and other extraneous noise, while recognizing only sounds that are recognized by the human ear.

Bill, Andy and Sandor, this new Viper will be anything you want it to be and the best thing about this, is that everything you command it to do is built right into the radio. There are no extra charges for options, as the Viper is way ahead of its competition.

The Viper has the ability to translate into 20 different languages and it is as easy as accessing the menu, or you also have the option of verbally communicating with this radio.

There is no manual with this new radio, as it speaks in your own language, instructing you each step of the way for a perfect setup. You also have the option of choosing a mans or womans voice, just like your GPS.

Now I have let the cat out of the bag! The Viper's CPU is constantly locked onto any one of 7 satellites and this is where the "quantum measure" of propagation is relayed back into the Viper.
We have been at the mercy of the "sun spot cycles" up until now, but the Viper has opened up a new way of communicating on the Amateur Radio Bands.

The days of winning contests are numbered, unless you own one of these beautiful new Viper radios!

There are just 2 small things that may delay the introduction of this radio....

1.The ARRL may have a problem with this, as the contesting will start to die off and the other radio companies will stop their advertising until they can figure out how to obtain the same technology. This is when the law suits will start, as the Viper has several patented technologies that protects them for 7 years.

2.Will the FCC find it in their best interest to allow the Viper to be FCC Accepted?

Only "The Shadow" knows.
---
Where are the 50 Checkin Gold Certificate winners? Let us know how you like the new "mail" you just received. Now, there are no excuses for staying awake during the nets!

The future 50 Gold Certificate winners will have to wait to find out what we are talking about, but it will be worth the wait! Thanks to all for making this a fun group.

I will talk to you on Sunday via "the sun spot cycle".

Subject: Re: [ten_tec_radio_net] Re: MY DREAM RADIO

Bill, I forgot to mention that the all new VIPER has an advanced preamp that enables it to hear subsonic sounds and amplify them and translate them from machine language into human language.

The advanced space-age preamp has a magnetic device that ignores white noise, pink noise and other extraneous noise, while recognizing only sounds that are recognized by the human ear.

John, K3UR

ae7kb <ae7kb@...> wrote:

In addition to everything mentioned so far, the ultimate dream radio will have a control to increase PROPAGATION GAIN. Go ahead and try to top that! I dare ya! I'd even swap out the coffee maker, ice machine, battery charger and beer tap in exchange.

HI Fellows

I can't take it anymore so I had to chime in with my idea of a dream radio for me.
I like to ragchew, DX and play in contests.
My Ten Tec Corsair station works pretty good at this but it is getting a little long in the tooth.

I also am not interested in TV Screens in my radio.
If I were to design a radio it would be like this.

1)A rig with a great front end that had DSP or a system to eliminate the annoying static that I get on my radios that make long term monitoring difficult, also a way to adjust the tone of the radio to accommodate for my poor hearing.

2)An ANL circuit to replace the useless Noise Blankers that never seem to works.Or at-least a noise blanker circuit that removes noise.

3)The ability to null out multiple adjacent signals, so I can dig out that station at the bottom of a noise well.

4)A simple layout with knobs and dials instead of menus, LCD screens are good for readouts and meters.

5)100 watts output, if I want more I'll hit the button on the amp.

6)A built in tuner that will tune down high swr and not just from 3:1

7)Dual VFO's

8)The ability to connect it to a computer so I can run it from HRD or equivalent programs.

9)Last and most important put it in a price range below $1000 so that retired old farts like me can afford it in my lifetime and not have to wait 20 years for all this high end stuff to depreciate to a price I can afford.

If I had $5000 to spend on a radio, I'd buy a newer truck.

A simple rig that does what a Ten Tec radio is known to do without all the bells whistles and jazz at a price the average, or below average guy can afford will sell faster that coffee and donuts at Tim Hortons, and make the company lots more money than your supper high dollar radios.

Just my opinion..

You need to buy a used Orion. They have most of what you are asking for and the menu system is next to none and a book or manual is not required. The Omni VII is easier to use and has the same plain menu readout system without having to remember what the menu number is for a particular change. The only issue you will have is the 1K price tag. I personally am waiting for the Orion III.

Ed..AB4IQ

Ps I am an ambassador and Beta tester and receive no compensation and have been a Ten Tec user since 1988 when I bought my Omni V.

# 638. TEN-TEC SSB NET RESULTS SUNDAY JULY 21, 2013

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-07-25 02:42:15 UTC
From: John Occhipinti
Topic: 638  Message: 638

I am back home and have completed the TEN-TEC net results from this past Sunday and I have also updated the Certificate Data Base.

The TEN-TEC 40 meter SSB "warmup net" was well under way at 18:00 UTC on 7.261. This has been a time for one-on-one discussions about our TEN-TEC radios, mics, amplifiers and other products that TEN-TEC sells.

The regular 40 meter SSB net started at 19:00 UTC on 7.261 with 86 people checking in. The 20 meter SSB net followed at 20:00 UTC on 14.325 with 87 people checking in.

Congratulations to the new 10 Checkin Certificate Winner:

AB2IO Mike NJ

Congratulations to the 4 new 25 Checkin Silver Certificate Winners:

1.KJ4WS Wade TN (the happiest man on the planet)!
2.KC3AHY Lisa NJ
3.W4DLA Dexter KY
4.W9OKV Gene IL

---

We also had 18 new people check into the nets on Sunday.

I will post the new Certificate Data Base in the FILES section.

Thanks to all who make the TEN-TEC SSB nets part of your Amateur Radio activities each week. I appreciate each one of you and count it a priviledge to be associated with such a fine organization as TEN-TEC.

I want to remind each one of the TEN-TEC Hamfest on September 28th and 29th in Sevierville, TN. I will be there to meet many of you. Last year was my first time there and it was a wonderful time of meeting the TEN-TEC staff, touring the factory where the radios are produced and making my wife Rose happy with visits to Pigeon Forge and Dollywood!

Date: 2013-07-27 15:30:24 UTC
From: kg4fet@bellsouth.net
Topic: 640  Message: 640

Well after weeks of playing with Mics and figuring I was going to have to live with the high frequency response of the various ones I have used I stumbled across an interesting solution. I went in and pulled an old karaoke mic from the junk pile and wired a new plug on it. The comments so far have been more favorable then I could have imagined, including that was the best sounding radio I had ever been on was it a new one? I am looking forward to testing it out on the nets tomorrow.

Bill, thank you for your input. There is a misconception among some Amateur Radio Operators who think that a specific mic will make them sound better.

The question is, "what is the person striving for?" As a musician and singer for many years, I want to make it clear that we are all born with a unique voice. A man with a tenor voice will never sound like a person with a bass voice and visa versa, no matter how much you spend on a microphone.

We cannot change our voice, we can only enhance the way we sound. This I accomplished with the correct balance of highs, mids and lows. With the right eq, the correct distance between your lips and the mic and keeping the ALC at a minimum, you should be able to sound as good as you can.

Now if you want to be an audiophile, and elevate the quality of your voice and transmissions, you will have to spend a lot of money. Go to http://nu9n.com and get a free education from my friend John Anning.

For the majority of our Group, this is not necessary. Get on the WARM-UP NET tomorrow at 18:00 UTC on 7.261 and we will help you to attain audio that is natural to your particular voice.

John, consumer sound systems are much the same to a point. Above a certain dollar amount, you're paying for differences most people can't detect and at the next plateau, you're paying for differences only the dog can hear. Much as I love the dog, he's just going to have to buy his own sound system.

I'm still working on my 40m vertical but you always compliment my audio on the 20m net. If it pleases your trained ear, that's good enough for me.

# 645. ten_tec_radio_net, an Elite Group

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-07-28 00:08:32 UTC
From: John Occhipinti
Topic: 645  Message: 645

Some people have inquired about the significance of belonging to an elite group of Amateur Radio Operators.

The guiding principle of the ten_tec_radio_net Group defines its MOTTO as a select body of people united together, with the purpose of gaining knowledge and sharing pertinent information about any TEN-TEC product.

These elite members of the group are a special and privileged select body of people who use the TEN-TEC products. Being part of this elite group has its special advantages such as;

1.Being able to keep in direct contact with other members of the TEN-TEC 40 meter and 20 meter SSB nets.
2.Being able to post unlimited messages on the ten_tec_radio_net Group.
3.Being able to upload important messages, and helpful hints in the FILES section for others to share.
4.Being able to upload multiple pictures of your shack and antennas in the PHOTO section.
5.Being able to send ATTACHMENTS to the group.
6.Being eligible to receive the prestigious TEN-TEC 10 Checkin Certificate, the 25 Checkin Silver Certificate and the 50 Checkin Gold Certificate, that are all personally signed and sent from Jim Wharton NO4A, Vice President TEN-TEC Inc.
7.Being able to have complete access to the Certificate Data Base that is updated weekly in the FILES section.
8.Having the opportunity to quickly become a TEN-TEC Ambassador with the opportunity to work at the TEN-TEC Booths during various hamfests.

Some examples of being a part of an exclusive and elite group remind me of;

1.The Navy Seals
2.The Blue Angels pilots
3.The Army Special Forces
4.The Army Rangers
5.The Green Berets
6.The Delta Force
7.You are free to add to this elite and exclusive group and please feel free to post them here.

As you can see, the ten_tec_radio_net Group does not boast about numbers, as we strive for quality and not necessarily quantity. I would like to borrow a slogan from another of the elite groups, the Marines and say that you are the few, the proud, the elite members of the ten_tec_radio_net Group! May God bless you, your families and all the members of our Military.

This is a source of significant frustration for me as well.

In the face of the really difficult propagation conditions we have been having during this sunspot cycle, calling for long periods of time and not being heard by the net controls or the designated relay stations is very discouraging.

While my availability on Sundays is limited and my HF amplifier is currently out of service for repair (which do not help, of course), it did seem as if John was diligently trying to pick up more relays than I've heard previously on 40 meters this past Sunday, but there were so many stations calling that I admit to having given up very early.

If the HF amplifier gets repaired before I leave for Florida this October I might have a shot at getting into the TenTec nets this year, but the reality is that I may have to wait for the next sunspot maximum before I can have any realistic expectation of being able to successfully check into these nets on a regular basis.

I couldn't hear either net control or relay station on either 40 or 20 meters. Once in a while I would hear a really loud station trying to get in. Condx very bad. Station 2 1/2 kc down came in very well on 20 meters.

Frank k3gdx, Norm w0hi and Barry k2mf,

I want to personally respond to all three and let you know that I feel very bad that you all tried to get into the TEN-TEC SSB Nets this past Sunday.

I was on both nets for a total of 3 1/2 hours and also had Lloyd n2kpc, along with several other relay stations calling for QRP stations, mobiles and other
low power stations.

I want to be able to check everyone in, as I consider each person very special.

Please do not give up, as the band conditions will get better and I will make a special effort to recruit more relay stations. I do depend on other people to listen and pick up any station that may be weak at my Atlanta Area location.

Thanks again for your concern and I do understand your frustration.

Barry, now that I am back home, I had time to research your checkins on the Certificate Data Base. You are correct and I want to apologize for overlooking your total from May 12th, when you reached the 25 checkin total.

This is the very reason why I have been asking everyone to check the Data Base each week as I have posted it in the FILES section after both nets.

I am forwarding this same email to Jim Wharton NO4A, Vice President TEN-TEC Inc. and he will send the 25 Checkin Silver Certificate to you as soon as he is able.

Please accept my sincere apology again, as this was an oversight on my part. Thank you for alerting me of this.

If anyone else in our group feels that an error was made on their total checkins, please let me know and I will make any necessary adjustments to your checkin total. Thanks to all for supporting our nets.

Hi John
Just wondered if the 25 check ins certificates were out yet? Its been a few months since I have made it to 25. I received the first 10 certificate soon after making 10. Just checking.....?
Thanks for running the net and hope to see you at the T-T Ham fest. I've put in vacation days for it already. We had a great time last year.

Thanks

# 655. Relays

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-07-31 14:28:09 UTC
From: w9cmd
Topic: 655  Message: 655

Hi John and the rest of the group.

Last Sunday, I had hoped to check in with my new eagle, but as many experienced, it was pretty well a non-starter. I finally decided to go downstairs on my O-7 and amplifier and was able to get through to Lloyd with help from another net member confirming my rig. That was on 40m. Then on 20m, it was clearly a no go, and I gave up.

What this suggests to me, being located in southern Indiana, is that you do need some additional relay stations farther west. Not just for Indiana, but for many others who are experiencing the same issue.

Basically you and Lloyd are in the eastern US, and from other nets I frequent, you are limited from the get go based on location. I would be happy to help,.....if I can hear you, or Lloyd, but sometimes even that is not the case. If the relay cannot hear the net control, then its a useless effort.

I suggest you do some thinking about good locations for a couple more relay stations, and then maybe solicit those locations on this list. I'm thinking maybe someone in Texas, and maybe another in northern Illinois? Either you or Lloyd need to be able to consistantly hear the relay station, and, of course, the relay station positioned to be able to hear more stations that you cannot.

Anything I can do to help, just ask, but I may not be the most appropriately located relay. Having an amplifier would be a necessity. Others may wish to comment, and suggest good relay locations for consideration.

Dave

Topic: 655  Message: 656

David, thank you for the information. I will agree that last Sunday was one of those days when propagation was not in our favor. We still were able to check in 76 people on the 40 meter net and 67 people on the 20 meter net.

As most of you know, I appointed Lloyd N2KPC in New Jersey as the Official Relay Station for the TEN-TEC 40 meter and 20 meter SSB nets last year and he has done a marvelous job and he will continue in this important capacity.

After seeing several other postings this week about the same thing that you are describing, I have been trying to figure out how I can assign several other people in stategic locations as Designated Relay Stations for the TEN-TEC 40 meter and 20 meter SSB nets.

David, having met you and worked with you at the TEN-TEC Booths at Dayton this year, that coupled with the fact that you also are a TEN-TEC Ambassador and willing to be an integral part of our nets, I am appointing you as the Designated Northern Relay Station for the TEN-TEC 40 meter and 20 meter SSB nets.

I would like to see if Paul, WG0G in Wisconsin will take the assignment as the Designated Far Northern Relay Station for the TEN-TEC 40 meter and 20 meter SSB nets.

I will concentrate on a Designated Southwestern Relay Station and the location should be in Texas. If anyone or several would like to take this position and you have both a directional beam and a linear amplifier, please contact me by personal email. I have checked my log sheets for the first 10 people that call into the 20 meter net every week and several are from Texas and they are all loud here at my Atlanta Area location. I may have to appoint someone if nobody comes forward.

We started the TEN-TEC SSB nets back up in April 2012 after a several year absence and we still have some growing pains and I want to do all I can to get everyone into the nets that calls in.

It should be understood that all relay stations must be a member of the ten_tec_radio_net Group. This is one way that I know that we are all on the same page and that we are truly working together as a team. Many of the people who check into our nets and many of the Certificate winners still have not yet signed up as members of the ten_tec_radio_net Group.

As I have said many times, the ten_tec_radio_net Group is an "elite group"!

I am working on the new Certificate Data Base and will be posting the new winners tomorrow. Thanks to everyone, as you have made the TEN-TEC SSB nets the most popular and most talked about nets on the Amateur Radio Band.

Things are starting to fall into place with the relay station situation for the TEN-TEC 40 meter and 20 meter SSB Nets. As it stands now;

1. Lloyd, N2KPC in New Jersey will remain the OFFICIAL RELAY STATION.

2. David, W9CMD in Indiana will be the newly created DESIGNATED NORTHERN RELAY STATION.

3. Sandor, KG4FET in Texas will be the newly created DESIGNATED SOUTHWESTERN RELAY STATION.

4. Pending Paul's approval; Paul, WG0G in Wisconsin will be the newly created DESIGNATED FAR NORTHERN RELAY STATION.

5. John, KC2QMA IN Tennessee will remain the OFFICIAL STATION STREAMING LIVE AUDIO OVER THE INTERNET.

# 659. TEN-TEC 40 METER & 20 METER NET RESULTS, JULY 28, 2013

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-08-02 01:05:58 UTC
From: John Occhipinti
Topic: 659  Message: 659

The TEN-TEC 40 meter SSB "Warmup Net" was in progress at 18:00 UTC on 7.261, with many people checking their radios, mics, antennas, audio, propagation and sharing pertinent information about TEN-TEC products.

The regular 40 meter SSB net continued at 19:00 UTC on 7.261 with 76 people checking in. The 20 meter SSB net followed at 20:00 UTC on 14.325 with 70 people checking in.

Band conditions were very bad and I had to rely on many relay stations to get some people checked in. There were several stations that were very weak at my Atlanta Area location that were relayed to me and I want to inform them now and they were Norm W0HI in OH, Frank K3GDX in NJ and Barry K2MF in NJ.

Congratulations to the 4 new 10 Checkin Certificate Winners:

1.WB4WMR Bill TN
2.KG4FET Sandor TX
3.WI6T Rex CO
4.W0HI Norm OH

Congratulations to the 2 new 25 Checkin Silver Certificate Winners:

1.WA2WLS Alan NY
2.KD2AVE Dave NJ

Congratulations to the new 50 Checkin Gold Certificate Winner:

1.AB4IQ Ed KY (TEN-TEC Ambassador)

Starting this Sunday we will be having:

1. Lloyd, N2KCP in NJ, continuing his outstanding job as the Official Relay Station.
2. Dave, W9CMD in IN, the Designated Northern Relay Station.
3. Sandor, KG4FET in TX, the Designated Southwestern Relay Station.
4. Paul, WG0G in WI, the Designated Far Northern Relay Station (pending his acceptance).
5. John, KC2QMA in TN, continues his outstanding job as the Official Station Streaming Live Audio over the internet.

We are trying to do all we can to be able to hear and checkin every station that calls in and I am always counting on other people on the nets to relay stations that I cannot hear. This takes teamwork and it is so good to know that those who are active members of the ten_tec_radio_net Group are faithfully supporting our efforts here. I will post the new Certificate Data Base in the FILES section.

# 662. TEN-TEC 40 METER & 20 METER NETS TOMORROW (SUNDAY)

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-08-03 10:43:26 UTC
From: John Occhipinti
Topic: 162  Message: 662

Just a reminder that the TEN-TEC 40 meter and 20 meter SSB nets will be in operation tomorrow at the regular times with the addition of 3 new DESIGNATED RELAY STATIONS.

Please be patient as we will be concentrating on these areas at specific times with the DESIGNATED RELAY STATIONS making the calls. We also will be giving priority to QRP, mobiles and other low power stations.

Starting this Sunday we will be having:

1. Dave, W9CMD in IN, the Designated Northern Relay Station.
2. Sandor, KG4FET in TX, the Designated Southwestern Relay Station.
3. Paul, WG0G in WI, the Designated Far Northern Relay Station.

Lloyd, N2KCP in NJ, will continue his outstanding job as the OFFICIAL RELAY STATION for both nets.

John, KC2QMA in TN, will continue his outstanding job as the OFFICIAL STATION STREAMING LIVE AUDIO over the internet.

We are a TEAM and are trying to do all we can to be able to hear and checkin every station that calls in and I am always counting on other people on the nets to relay stations that I cannot hear at my Atlanta Area location.

Paul, thank you for your gratitude and for thanking TEN-TEC. When I was working at the TEN-TEC Booth at the Dayton Hamvention in May, Jim Wharton, NO4A, Vice President TEN-TEC Inc. spoke to me about doing something extra for the 50 CHECKIN CERTIFICATE winners.

I have also had this delicious TEN-TEC coffee and the special bag with the TEN-TEC LOGO is a collector's item.

Paul, I was out of town on business all week and will update last Sunday's
Net info and post the Data Base along with the new Certificate winners. I will have this done and posted tomorrow.

Thank you for the fine job you did last week as the DESIGNATED FAR NORTHERN RELAY STATION.

John, K3UR
Net Control, TEN-TEC Nets

Good Morning gentlemen,

Yesterday, I was surprised with a certificate and gift that arrived at
my home. Thank you very much. I didn't know that was happening.
I want you to know that I am a coffee lover. I am looking forward to
enjoying a cup on Saturday morning. I get up at 6 am and watch the deer
play in the field behind my home and start the day off with a cup of
coffee.

Thank you as a company and as hams for putting a personal interest and
touch back into our hobby!! You and your staff are what keeps this
Country great.

Paul, WG0G

# 669. TEN-TEC 40 METER & 20 METER SSB NET RESULTS 8-4-2013

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-08-10 01:32:11 UTC
From: John Occhipinti
Topic: 669  Message: 669

I was out of town on business most of this week and just found time to complete the net results and new Certificate Data Base from last Sunday August 4, 2013.

The TEN-TEC 40 meter SSB Warmup Net was under way at 18:00 UTC on 7.261 with many already on the frequency comparing signals, mics, audio and discussing important information about their various TEN-TEC radios.

The 40 meter SSB net officially started at 19:00 UTC with 89 people checking in and the 20 meter SSB net followed at 20:00 UTC on 14.325 with 78 people checking in.

We were well coordinated with 4 relay stations on both nets and were able to handle coast to coast checkins.

1. Lloyd, N2KPC in NJ is the Official Relay Station.
2. Paul, W9CMD in IN is the Designated Northern Relay Station .
3. Sandor, KG4FET in TX is the Designated Southwestern Relay Station.
4. Paul, WG0G in WI is the Designated Far Northern Relay Station.

I want to recognize John, KC2QMA in TN, as the Official Station Streaming Live Audio over the internet on both nets. We really appreciate his efforts week after week.

Just a side note: Lloyd, N2KPC is the first to reach 60 checkins! Thanks Lloyd for your faithfulness and supporting the nets.

Congratulations to the 4 new 10 Checkin Certificate Winners:

1.N3SW, Scott PA
2.W4GAA, Earl NJ
3.K2DRN, Dave NJ
4.KA2NBB, Dick NJ

Congratulations to the 8 new 25 Checkin Silver Certificate Winners:

1.WB8CTC, Joe WV
2.N7INO, Jim LA
3.K2BLC, Lee NJ
4.W9NWN, Doug IN
5.K4SWE, Steve TN
6.KC4DYM, Ray FL
7.K7TXO, Gene ID
8.N0ENO, Rich KS

We also had 13 new checkins on the nets. Thanks to all who have been supporting our efforts here the past 1 1/2 years since we re-started the TEN-TEC nets after several years of dormancy. I appreciate each one of you! I will send the new DATA BASE to the FILES section shortly.

# 671. Re New Microphone for my Paragon

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-08-10 15:42:32 UTC
From: kj4ws
Topic: 671  Message: 671

I have used the Model 705 for a while now. To call my various Nets, we were looking for an Headset. This because while looking at various pages and other paperwork, my head moved around a lot. About 2 years ago and just goofing around. I took a headset purchased at the local Dollar Store for $5.00 and wired the Electret Condenser Element to a 4 pin plug for the Paragon. Also wiring a momentary contact switch in an old pill bottle for keying.
Today, I still have the $10.00 Headset bought at half price Closeout, wired to my Paragon. On the Air checks still verify that the Cheap Headset does just as good as the Model 705. I will be using it Sunday for the Ten Tec Net. So far 27 check-ins and folks continue to say it sounds good. So, Go Figure. The only change in the Shack was a Long Nail in the shelf to hold the headset when not in use.
73 and May God Bless from Wade/KJ4WS

I can't tell the difference between the cheapo gaming/skyping headsets for twenty bucks or less and the so called high end models. My headset is a generic cheapo that cost me about seven bucks four years ago and I get great audio reports. I'm awaiting delivery on a really costly headset that I had to kick up twenty one dollars for, shipping included. Sometimes, money's no object.

Many have been asking about the States with the most people checking into the TEN-TEC 40 meter and 20 meter SSB nets each week. Here is the top 10 States in reverse order:

10. GA 32
9. NY 35
8. VA 37
7. PA 39
6. NC 42
5. NJ 43
4. TX 45
3. OH 47
2. FL 48
#1. TN 61 (TEN-TEC Inc. should be smiling right now)!

I will talk to you on both nets with my Omni VII this week.

Hi John,

I reached 51 points on the list published on July 7th. I now have 59 points and have not received my certificate for 50 check-ins. I wonder if it was missed somehow? No big rush, just curious.

73, Tony VE3DWI.

Tony, you are correct.....I just checked the Net login sheets and the Certificate Data Base from July 7th and you did reach the 50 checkin mark that day.

As you can see by the heading, I am including Jim Wharton NO4A, Vice President TEN-TEC Inc. with this reply, so he can send your 50 Checkin Gold Certificate to you. The only way that I know for sure if someone receives their certificates, is if the person tells me during the nets or by email. Jim Wharton sends me confirmation each week that he mailed out the new Certificates.

I am sure this was an oversight or possibly got lost in the mail. This is the reason why I send the newly updated Certificate Data Base into the FILES section each. Everyone should be checking this to keep track of their totals and to inform me of any errors.

Thank you for alerting me of this. I will talk to you today on the nets.

Jim, please send another 50 Checkin Gold Certificate to:

VE3DWI, Tony Lelieveld
2529 Government Road #R.R.1
Desbarats, ON P0R 1E0
Canada

Thank you Jim, for your generosity and support for the TEN-TEC 40 meter and 20 meter SSB nets and the ten_tec_radio_net Group.

John,

I just want to thank you for the great job in running the Ten-Tec nets on 40 and 20 meters each Sunday. It was really helpful yesterday when you recorded me using my Argonaut V with and without the 715 RF Speech Processor.

I've heard reports it made a big difference from a number of hams I've worked, but that was the first time I got a chance to hear the difference myself. Yes, the audio was more restricted in frequency response, but it sure had a lot more talk power with it in. I'm having a lot of fun with my Argonaut V, maybe I just might upgrade to an Argonaut VI ! ;-)

Thanks again John & 73,
Bill/K1FPV

Subject: Re: [ten_tec_radio_net] Re: New file uploaded to ten_tec_radio_net

Tony, you are correct.....I just checked the Net login sheets and the Certificate Data Base from July 7th and you did reach the 50 checkin mark that day.

As you can see by the heading, I am including Jim Wharton NO4A, Vice President TEN-TEC Inc. with this reply, so he can send your 50 Checkin Gold Certificate to you. The only way that I know for sure if someone receives their certificates, is if the person tells me during the nets or by email. Jim Wharton sends me confirmation each week that he mailed out the new Certificates.

I am sure this was an oversight or possibly got lost in the mail. This is the reason why I send the newly updated Certificate Data Base into the FILES section each. Everyone should be checking this to keep track of their totals and to inform me of any errors.

Thank you for alerting me of this. I will talk to you today on the nets.

Jim, please send another 50 Checkin Gold Certificate to:

VE3DWI, Tony Lelieveld
2529 Government Road #R.R.1
Desbarats, ON P0R 1E0
Canada

Thank you Jim, for your generosity and support for the TEN-TEC 40 meter and 20 meter SSB nets and the ten_tec_radio_net Group.

John, K3UR

Hi John,

I reached 51 points on the list published on July 7th. I now have 59 points and have not received my certificate for 50 check-ins. I wonder if it was missed somehow? No big rush, just curious.

73, Tony VE3DWI.

Bill and the Group,
The 715 is a great accessory. As you learned, and particularly when used with an Argo V or a 6N2, which both had 20w max output, it makes all the difference in the world getting heard. Not a rag chew device, but the 715 turns them into near 100w equivalent rig. I find its best suited for portable ops, where weight is a concern and making a contact is the goal. To call the 715 just a processor also needs clarification. No comparison to the standard speech compression circuits. The only downside is that its a bit touchy to get set up correctly.

Hi Dave,

Well, you are 100% on the money with your observations regarding the 715 processor. I am able to switch it in and out on all my rigs. I very often use it not only with my Argonaut V but also with my 6N2. I can also switch it in line for my other HF rigs. I'm no longer a big DXer on HF but still love catching the tough ones on VHF and UHF which is when I use my 715 the most.

I made a minor modification on my 715 by taking the mic level control which was in the back of it, and bringing it out to the front of the case. It is a lot easier to adjust with multiple rigs.

73,
Bill/K1FPV

Topic: 680  Message: 686

Bill, the TT-715 is a great accessory. Like any fine instrument it can be played well or poorly, its all up to the operator. I have found that in most of my SSB DXing (347/338 Mixed), I can leave my Titan 425 Linear Amplifier off as the TT-715 will provide 6db average increase in power. I have used the audio editor AUDACITY and a FLEX-1500 to analyze the output from my OMNI-VII and TT-715 with various microphones. Typical speech unless manipulated in transmission or reception has a power roll off of about 6 dB per octave. Using a Heil HC-4 or similar microphone with a rising response and the TT-715 with almost any SSB transceiver/transmitter, is like turning on an amplifier.

Panadapter screen shots and sound clips from AUDACITY are available on request.

# 687. 715 Processor

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-08-15 13:39:49 UTC
From: w9cmd
Topic: 680  Message: 687

Glad all you guys chimed in !!

The 715 is not well known outside of a few of us Ten Tec fans, and its attributes need to be passed along for everyone's benefit.

I had great success using a 715 with a 6n2 and a scout on a trip to the Bahamas a few years back. Used a buddipole beam on 6m and a vertical on the beach. Great fun. I love going portable, and leaving a heavy amp behind is the ticket!!

Gary, if you have the screenshots of examples, can you email them to me? dave.drake@...
Also, maybe they could be saved to the files area here? I'm sure we could all learn a few things on setup.

Bill, sounds like you have the right idea on moving the output level control to the front. Ten Tec should have thought of that !! hi hi.

PS, changed the thread to 715 for those who search archives.

# 688. TEN-TEC 20 METER & 40 METER SSB NET RESULTS AUGUST 11, 2013

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-08-16 01:13:47 UTC
From: John Occhipinti
Topic: 688  Message: 688

The TEN-TEC 40 meter SSB "Warmup Net" was in progress at 18:00 UTC on 7.261 with many people checking their radios, mics, antennas and discussing pertinent information about various TEN-TEC products.

The TEN-TEC 40 meter SSB net started at 19:00 UTC on 7.261 with 95 people checking in.

The TEN-TEC 20 meter SSB net followed at 20:00 UTC on 14.325 with 81 people checking in.

Congratulations to the new 10 Checkin Certificate Winner:

N8IPO Jay OH

Congratulations to the 5 new 25 Checkin Silver Certificate Winners:

1. KC8MZR Gene WV
2. W3LI Andy PA
3. K8QH Dave MI
4. AE7KB Bill AZ
5. W9CMD David IN

Congratulations to the new 50 Checkin Gold Certificate Winner:

WG0G Paul WI

We also had 28 first time checkins.

I want to thank the 4 Relay Stations for their splendid job:

1. N2KPC Lloyd NJ Official Relay Station
2. W9CMD David IN Designated Northern Relay Station
3. KG4FET Sandor TX Designated Southwestern Relay Station
4. WG0G Paul WI Designated Far Northern Relay Station

I want to thank KC2QMA John TN The Official Station Streaming Audio via Internet.

The TEN-TEC 40 meter and 20 meter SSB nets and the ten_tec_radio_net Group are successful because of all the great teamwork that takes place each week. Thanks to all of the net members and members of the ten_tec_radio_net Group for your continued support. I appreciate each one of you and think of you as part of our family. God bless you and your families.

I will post the new Certificate Data Base for August 11, 2013. Please check your numbers.

John, K3UR

Hi Sandor

☐seem to☐ is not a technical term which I am familiar with.
Either they do or they don☐t.

If they are indeed switching in and out on AM/FM, then the problem is not the filter switching but rather the mode switching signal.

When in SSB/CW modes there is a signal that triggers many things including the filter selection.
Apparently this signal is not making it to the board where the filters are selected.

I would start by just unplugging and re-plugging the plugs between the boards several times. Probably just a loose connection and the SSB signal is not getting through. Obviously you should remove power before doing this (hi).

Gud luk.

Sandor,
Rick is probably right on target. We'll assume this is an "intermittent" problem? Those type are usually due to a connection issue. The Paragon is getting old enough that the contacts tend to oxidize and you can loose good connection. Its a similar problem on other older rigs, such as the Drake TR7 and Heathkit SB104. On those, for example, you pull the boards, use some deoxit on the contacts and reinstall.

In the early Omni Series, and Paragons, there were (and still are) quite a number of connections between boards. Unlike the rigs mentioned above, TT used quite a few cable connections. Start with the filter board, unplug and de-oxit all the connections. Don't forget the filters themselves. Look for where the leads go from the filter board. Work from there and periodically test the rig by switching filters and mode.

It may be a easier fix than you thought. Hope so, anyway.

Sandor,
All the advise the folks have given you is right on.

Add in to unscrew the screws that hold the boards down to the chassis, and wiggle the board around. No need to take the screws out, all you're doing is re-seating any oxidized connections under the screws. I have had to do this to many Ten Tec rigs over the years. It helps.

Good luck, and see you on the net.

By the way, you probably will never know which of these suggestions did the job. hi hi

I want to personally welcome the 5 new people that joined the ten_tec_radio_net Group this week.

I invite you to join us on the TEN-TEC 40 meter and 20 meter SSB Nets tomorrow. The 40 meter net starts at 19.00 UTC on 7.261 and the 20 meter net follows at 20:00 UTC on 14.325.

If you want to check your radios, mics, antennas, ask questions or just want to have a one on one conversation with me, join us at 18:00 on 7.261.
Thank you.

John, K3UR

Hi John

Thank you for the personal email, a very nice touch from you, I am impressed!

I have joined the group mainly because I am thinking of changing my old Kenwood Ts-870 to a TenTec Omni 7 or a Orion 2 and I am favouring the Orion 2.

I would not be considering the Orion if the Omni had an analogue signal meter, I cannot stand the bar ones like I have on the TS-870, which I have had the 870 for 12 years, LOL!

I can’t join you on the 75m net as we don’t have that frequency here in Europe, I may give 20m a try sometime though.

I really like the Orion to look at, plus it has very good reviews and a loyal following, the only thing putting me of is the price at $6850 over here it is a ridiculous price, I may look into importing one though direct from the US.

Again thank you for the email and oh, I am on QRZ.com, just looked you up on there.

Hi Keith and welcome to the group. Although Ten Tec will continue to support parts, service and firmware for years to come, the Orion II is no longer in production. At this point, used O2s can be found with a little effort. There's two units offered on Ten Tec's website as we speak. The Omni VII is Ten Tec's flagship radio for the time being but probably not for too long.

Hi Bill

That is interesting, I wonder why they have stopped making the Orion, parts I assume?

Is there a new radio on the horizon I wonder?

I looked at the TenTec used radios page after you kindly sent the tip and they have 2 listed, one ex demo and a used for $3,349.

I have also registered as a user and for the news letter by email from TenTec.

I have a eye on this on ebay <http://www.ebay.co.uk/itm/231031647923?ssPageName=STRK:MEWAX:IT&_trksid=p3984.m1423.l2649> http://www.ebay.co.uk/itm/231031647923?ssPageName=STRK:MEWAX:IT&_trksid=p3984.m1423.l2649 it is at $2,275 as I type, no guarantee though, might bid up to $2650, after that the one form TenTec starts to look good.

Could I ask for your help, I see you have both radios the Orion II and the Omni 7.

Forgetting my preference for the analogue signal meter, in your opinion is there much of a difference between the Orion II and the Omni7?

Based on performance especially on the receive side of things, I would use a second receiver if I had one, but so far I have never used one so I guess I won't miss what I don't have.

My list of top spec for a radio is as follows

1. Must have a good rejection for adjacent channels

2. I like a coloured screen on a rig

3. Menus must be easy to use without needing to read the manual

4. Audio out must be first class

5. Adjustable filters are a must

6. I have small hands so size is not that important

7. I like analogue meters but not at any cost.

Again thanks for all your help, I will look for you on the 20m net later today, I think it is 20.00 hrs UTC

Keith, according to Ten Tec, outside vendors are no longer manufacturing many standardized parts for the Orion series and small lots of custom built items are prohibitively expensive.

All Ten Tec radios are far ahead of the competition when newly released and are manufactured for years until everyone else starts to catch up. Technology marches on. Of course there's a new radio on the horizon but TT plays their cards close to the chest.

Hello again, Keith. I wish I had an Omni VII and an Orion II but I am quite content with my late model Jupiter. The man to ask regarding a side by side comparison is John K3UR, our esteemed Ten Tec net controller and owner/moderator of this fine group.

Ten Tec digital meters are a cut above most others and are actually quite nice.

Hi Bill

I am listening on 14.325 and can here some people calling but it is difficult at best 5x4 most are nothing at all! I cant hear the net controller John K3 UR at all, I will hang around to see if the band conditions change though. I have listened to the online audio and that is a brilliant idea, at least I know you guys are there even if I cant hear then on the radio!

# 710. TEN-TEC 40 METER & 20 METER SSB NET RESULTS FOR SUNDAY AUGUST 18, 2013

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-08-23 03:08:40 UTC
From: John Occhipinti
Topic: 710  Message: 710

The TEN-TEC 40 meter SSB Warmup Net was in progress at 18:00 UTC on 7.261 with a question and answer session, as many checked their various radios, mics and antennas. Bob, K4TAX was on with his new Omni VII and answered several questions about TEN-TEC products. Bob is a Beta Tester for TEN-TEC and also a TEN-TEC Ambassador and we all appreciate his knowledge and expertise with the various TEN-TEC products.

The 40 meter SSB net started at 19:00 UTC on 7.261 with 82 people checking in. The 20 meter SSB net followed at 20:00 UTC on 14.325 with 71 people checking in.

Congratulations to the new 10 Checkin Certificate Winners:

1. KD4AR Sonny GA
2. W4AG Stan NC

Congratulations to the new 25 Checkin Silver Certificate Winner:

KD4HJT Ray SC

Congratulations to the new 50 Checkin Gold Certificate Winners:

1. KF4AM Bob SC
2. K9QED Phil IL

We had 19 new people check into the nets including, IZ2NXF, Enrico from Italy. Many TEN-TEC users from around the world are able to listen to both the TEN-TEC 40 meter and 20 meter SSB nets on the internet, thanks to the efforts of John, KC2QMA from Nashville, TN who streams the live audio.

Thanks to the relay stations that do a great job each week. They are getting good experience to take over the nets when a change becomes necessary.

I want to welcome the new members of the ten_tec_radio_net Group. I will be posting the new Data Base in the FILES section. Please check your totals. Thanks to everyone for your continued support.

# 712. TEN-TEC 40 METER & 20 METER SSB NETS TODAY

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-08-25 12:49:16 UTC
From: John Occhipinti
Topic: 79  Message: 712

The TEN-TEC 40 meter SSB Warmup Net will be in progress at 18:00 UTC on 7.271. This is an opportunity to check out your various radios, mics, antennas, to ask questions or just to have a casual one on one QSO with anyone on the frequency.

The TEN-TEC 40 meter SSB net will be in progress at 19:00 UTC on 7.261 and the TEN-TEC 20 meter SSB net follows at 20:00 UTC on 14.325.

I will be using my Omni VII today and will give my Orion II a rest this weekend. As usual I am always counting on the relay stations and anyone else to pick up any stations that may be weak at my Metro Atlanta Area location. I am looking forward to talking to you today.

# 713. Ten Tec SSB Net - LIVE Audio Feed from Nashville, TN Today.

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-08-25 17:25:14 UTC
From: kc2qma
Topic: 713  Message: 713

Ten Tec SSB Net - LIVE Audio Feed from Nashville, TN.

Direct link to Audio feed: http://www.qrz.com/db/KC2QMA
<http://www.qrz.com/db/KC2QMA>

This audio feed will be available every Sunday from Nashville TN
starting at (19:00 UTC 40M 7.261) & (20:00 UTC 20M 14.325).*Schedule &
conditions permitting.

Go to the Link above and click on the play button in the video window
and after a short advertisement the audio will begin to play. Some delay
of the audio due to internet latency is normal.

(My station in Nashville is a Ten Tec Orion II - Wire dipole @75ft flat
top)

During poor band conditions the receiver of the Ten Tec Orion II will be
adjusted for best intelligible signal and may have reduced bandwidth and
employ some DSP noise reduction.

Hope you enjoy and thanks for supporting the Ten Tec SSB NET!

# 714. TEN-TEC 40 METER & 20 METER SSB NET RESULTS AUGUST 25, 2013

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-08-28 00:49:52 UTC
From: John Occhipinti
Topic: 714  Message: 714

The TEN-TEC 40 meter SSB Warmup Net was in progress at 18:00 UTC on 7.261 with people checking their various radios, mics, antennas, propagation and asking questions about TEN-TEC products. We were very fortunate again to have Bob K4TAX on the net, as he replied to several questions about TEN-TEC radios and mics.

The regular 40 meter SSB net started at 19:00 UTC on 7.261 with 84 people checking in. The 20 meter SSB net followed at 20:00 UTC on 14.328 with 81 people checking in.

Congratulations to the new 10 Checkin Certificate Winner:

WB4HUC Mike TX

Congratulations to the new 25 Checkin Silver Certificate Winners:

1. KB1RVT Nick VT
2. KC2TKD Frank NJ
3. W4CLE Charles GA

Congratulations to the new 50 Checkin Gold Certificate Winners:

1. K1FPV Bill MA
2. WD8DFO Leo Mi
3. WA0BAG Paul TN

We also had 21 first time checkins including; M0RSJ Keith England

Thanks to John KC2QMA, TN for streaming the live audio over the internet. I also want to thank our relay stations for their valuable help:

1. Lloyd, N2KPC NJ Official Relay Station
2. W9CMD David IN Designated Northern Relay Station
3. WG0G Paul WI Designated Far Northern Relay Station
4. KG4FET Sandor TX Designated Southwestern Relay Station

For your added information, I took the time to list the various radios that checked into the nets this past Sunday:

Orion II (26) Note: It was sad to see the most popular radio is no longer being produced.
Eagle (21)
Omni VII (16)
Jupiter (8)
Orion (7)
Corsair (6)
Omni 6+ (5)
Argosy (4)
Scout (3)

Argo 5 (3)
Triton (2)
Omni C (1)
Omni D (1)
Pegusus (1)
Other Brands (37)

Thanks to all for your continued support for the nets and also the ten_tec_radio_net Group. I will post the new Certificate Data Base in the FILES section in a few minutes. Have a safe and blessed Labor Day weekend.

From: John Occhipinti
Topic: 716  Message: 716

The ten_tec_radio_net Group is a friendly, family oriented Group of down-to-earth Amateur Radio Operators. We have not spelled out any specific do not's, but I have made it clear that anything Amateur Radio related, is allowed to be posted here, as long as the person posting is an up to date member of the ten_tec_radio_net Group.

I have had several requests recently from those who wanted to post their own agenda here and they were not members of the ten_tec_radio_net Group. I gave them ample opportunity to subscribe to our Group and after failing to do this, I had to deny them the priviledge of posting items about their own personal things on our "elite Group".

There was no animosity on my part, but there are certain things in life called "fairness and respect". In fact if those people change their mind and join our Group, they can be free to post any Amateur Radio topic and radio gear on this Group.

As one could easily see, there are many advantages of being a member of the ten_tec_radio_net Group. So, to all of our faithful members and supporters, you are free to post any Amateur related item or gear on this Group. Thank you.

# 717. Amp for Sale

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-08-28 17:50:43 UTC
From: <w4cm@...>
Topic: 717  Message: 717

I have a 12V HF mobile or base amplifier for sale. This amp is great for QRP or drive up to 15W. I have listed the details below.

HLA-300V Plus HF Professional Linear Amplifier With Fans
A full range HF amplifier with automatic or manual band switching.
Ideal for use with the Yaesu FT817 & FT897, Flex, ten Tec and Icom 703, but suitable for use with any low power HF radio.
Frequency : 1.5 - 30 MHz , covers 160 meters, 80 meters, 60 meters, 40 meters, 30 meters, 20 meters, 17 meters, 15 meters, 12 meters and 10 meters

Input power - 2-15 W, Output power - 300 W Max (Output power SSB - 500 W Max)

If interested please contact me direct at w4cm@....

Thanks,

W4cm

It looks like my email address got cut off.
It is my call @...

The amp is less than one year old and has probably less than one hour on it. No scratches, rubs or marks. Non smoking household and no pets.
Sells new for $499 I will offer at $399.00.
We can discuss payment method and shipping.

Thanks again.

If anyone missed this, above is video I just found video of text messaging getting trounced by Morse Code (ham operators) on Jay Leno.

Below is a different video of a test where text messaging wins (not by much) and it features Ten Tec equipment J

Robert

I haven't seen that, very interesting and thanks for sharing. I wonder what would happen if you could put a text champion against a morse code champion, if either exist though?

To honor the request of many of our TEN-TEC SSB Net members, there will be a Special Event TEN-TEC Net on Friday September 27th at 2PM Eastern Time, 1 PM Central Time on 7.261.
This unique SSB net will originate from the 2013 TEN-TEC Homecoming Hamfest in Sevierville, TN. This 13th Annual TEN-TEC Hamfest will be held on the campus of TEN-TEC Inc, where all of these fabulous radios are designed and produced.

Thanks to Jim Wharton NO4A, Vice President, TEN-TEC, Inc. there will be an added feature. Everyone that checks into the net that day will receive a beautiful QSL card, especially designed for this TEN-TEC 13th Annual Homecoming Hamfest. These QSL cards will be signed and sealed inside of envelopes before mailing.

I cannot let Jim do all of the gift giving, so I am taking the opportunity to give double checkin credits for everyone that checks into this Special Event TEN-TEC SSB net. Jim and I both feel that it is better to give than to receive!

For all of the net members that will be attending the Hamfest, please don't feel left out, because
I am giving "you all" or is it "ya'll" (excuse me, I am a Yankee now living in the Deep South)!
As I was about to say, "all of you" who sign my special log-in sheets, will also receive the same QSL Cards and the double checkin credits.

Also, I am honored to be giving a "talk" about the TEN-TEC 40 meter and 20 meter SSB nets at the Special Net Forum, under the big tent at 1PM Eastern Time. I am looking forward to seeing many of you again and meeting many of our net members there.

I would like to have your input about this, so feel free to post your feelings right here on this "elite ten_tec_radio_net Group". Be safe and may God bless you and your families this Labor Day Weekend.

Everyone that checks into the net that day will receive a beautiful QSL card, especially designed for this TEN-TEC 13th Annual Homecoming Hamfest. These QSL cards will be signed and sealed inside of envelopes before mailing.

I cannot let Jim do all of the gift giving, so I am taking the opportunity to give double checkin credits for everyone that checks into this Special Event TEN-TEC SSB net. Jim and I both feel that it is better to give than to receive!

For all of the net members that will be
attending the Hamfest, please don't feel left out, because
I am giving "you all" or is it "ya'll" (excuse me,
I am a Yankee now living in the Deep South)!
As I was about to say, "all of you" who sign my
special log-in sheets, will also receive the same QSL Cards and the double
checkin credits.

Also, I am honored to be giving a "talk" about the
TEN-TEC 40 meter and 20 meter SSB nets at the Special Net Forum, under
the big tent at 1PM Eastern Time. I am looking forward to seeing many of
you again and meeting many of our net members there.

I would like to have your input about this, so feel
free to post your feelings right here on this "elite ten_tec_radio_net
Group". Be safe and may God bless you and
your families this Labor Day Weekend.

Subject: Model 540 Triton Explained

Motorola had released a Marine Radio also called the Triton. In a deal to avoid a lawsuit from Motorola, our friends at Ten Tec just dropped the Triton named and called the radio the Model 540. In a related incident, Motorola trademarked the phrase PL Tone many years ago and will still go after any company who uses the phrase PL Tone. It is a shortened form of " Private Line " which Motorola invented. Our good friends at Motorola also protect their software like Rabid Dogs. Can't really blame them though.
Thanks for the Great Job you do on the Nets. 73 from Wade/KJ4WS

Signal reports here in SW England from Sunday 1st Sept 2013 TT net -

I thought you may be interested in how you may have been heard over in England?

Bill K1 FPV 5/7
John K3 UR 4/7
Lee K2 BLC 4/9
John KC2 QMA 4/9
Tony VE3 ?WI 3/6
Cecil W4 CM 4/7

I could hear lots of others calling in but not enough to make out anyone's call.
At about the time John passed the net to Lloyd the band conditions changed and I lost all contacts at my end, my noise level went from a 3 to 8!

I will try to call in again next week.

73's Keith M0 RSJ

# 737. Re: Fwd: [ten_tec_radio_net] SPECIAL ANNOUNCEMENT

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-09-02 15:55:09 UTC
From: w9cmd
Topic: 728  Message: 737

John,
How long do you plan on running the Friday net? example: 2:00pm Eastern time to 3pm eastern? Or ... as long as there are checkins? This will be on 40m, so next question do you plan on doing anything on 20m? They do have an HF beam on site.

Maybe in 2014, you could apply for a special event call-sign....like maybe K4TT or something close to that ... K4T? Then some of us could get together and spell each other out for the weekend. Just a thought.

Anyway, think about that for next year. A great way to promote the hamfest, both this time and in the future !! THANKS !

FYI....I plan on going down Thursday evening, and will be there on Friday. Will have to leave to come back home Saturday morning, however. Have a family conflict on Saturday pm. Wish I could stay the weekend. Its about a 5 hour drive for me, but always worth it to come to the mountains of east Tennessee!!

Thanks,
David

Ten Tec SSB Net - LIVE Audio Feed from Nashville, TN.

Direct link to Audio feed: http://www.qrz.com/db/KC2QMA
<http://www.qrz.com/db/KC2QMA>

This audio feed will be available every Sunday from Nashville TN
starting at (19:00 UTC 40M 7.261) & (20:00 UTC 20M 14.325).*Schedule &
conditions permitting.

Go to the Link above and click on the play button in the video window
and after a short advertisement the audio will begin to play. Some delay
of the audio due to internet latency is normal.

(My station in Nashville is a Ten Tec Orion II - Wire dipole @75ft flat
top)

During poor band conditions the receiver of the Ten Tec Orion II will be
adjusted for best intelligible signal and may have reduced bandwidth and
employ some DSP noise reduction.

Hope you enjoy and thanks for supporting the Ten Tec SSB NET!

Hi John

I'm will Bill on this one and here is my 5p's or is it 2c worth from the UK,
UTC is good, the US must have a 3 time zones or more and for me to work them out plus or minus our own DST here would be confusing for my few brain cells that I have left, LOL!
I keep a clock on my shelf in the shack always set at GMT / UTC which was really cheap and this makes it really easy for me when anyone asks the time in UTC.
Anyway keep up the good work and I hope to be able to work some of you again on Sunday.

--- In ten_tec_radio_net@yahoogroups.com, <ten_tec_radio_net@yahoogroups.com> wrote:

Hi John. Would that be standard time or daylight time? Arizona doesn't participate in DST.
My feeling is that, as hams, we should use UTC for time related issues.

Just my $0.02.

Bill AE7KB

Hi John

Thanks for all the updates unfortunately the rescheduled times for me mean, when you get to the 20m net part and start with Lloyd and the out of the USA stations it is Monday for me!!!
All understood though and why you have to make the changes this week and hopefully when you get back to the normal time again I can call in. I have this thing called work which means I have to get up early on a week day to get to work!!!!
A bit annoying though as my Orion 2 arrived yesterday, however I cant use it at the moment because I don't have Yaesu wired mic.I have ordered the bits to make an adapter and they should arrive next week.

# 761. TEN-TEC SSB NETS MOVING 3 HOURS LATER TOMORROW

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-09-14 13:23:17 UTC
From: John Occhipinti
Topic: 761  Message: 761

As per my posting yesterday, I am moving both TEN-TEC SSB Nets 3 hours later for this week only. The 40 meter net will start at 2200 UTC (6PM Eastern Time), (5PM Central Time) on 7.261 and the 20 meter net will follow at 2300 UTC (7PM Eastern Time), (6PM Central Time) on 14.325.

There will NOT be any Warm-up Net this week. This is being done for this Sunday only, as I have a prior family commitment.

I know this may be inconvenient for some, but I have to protect the integrity of the TEC-TEC CERTIFICATE PROGRAM and this will be fair to everyone who checks into our nets.

We will return to the regular net schedule next week. Thank you for your understanding in this matter.

I posted several days ago that I was changing the TEN-TEC SSB net times for this Sunday only and that the nets were being conducted 3 hours later than the regular net times, due to a prior family committment that I had. Obviously this was not good enough for some who sent emails to me questioning my decision. My explanation should have been enough, but I understand human nature.

I do not have the time to personally answer those who questioned my change in net times and I would like to ask this question. What were TEN-TEC radio owners doing on Sunday afternoons prior to April 2012? I can tell you that there were no TEN-TEC nets for several years before that date. Dudley use to be net control of the TEN-TEC net and took a job with Flex Radio several years before April 2012.

When I purchased my first TEN-TEC Omni VII in March of 2012, I joined the Yahoo Omni VII Group and my first posting was asking what frequency the TEN-TEC net was on. Several people answered and said that there were no TEN-TEC nets for several years since Dudley took a job at Flex Radio.

When I heard this I was very disappoined and posted for several people to meet me on 40 meters for a round table discussion, as I wanted to learn more about my new Omni VII. We had a good group show up and when we got together again the following Sunday, we had even a larger group.

Because of the renewed interest in the TEN-TEC nets once again, I was contacted by Jim Wharton NO4A, Vice President TEN-TEC Inc and he asked me to take over the new TEN-TEC 40 meter SSB net. Jim posted this new TEN-TEC SSB net on the TEN-TEC Website under the Community Section.

As the weeks went by we had an increase in numbers and when I was asked about running a 20 meter SSB net, I accommodated everyone and have been conducting both the TEN-TEC 40 meter and 20 meter SSB Nets ever since April 2012.

In January of this year Jim Wharton, NO4A asked me if I was interested to giving TEN-TEC Certificates for those who check into the nets regularly and we worked things out and started the TEN-TEC Certificate Program on January 20th of this year. Since this date of January 20, 2013 we have had 1007 different people check into the TEN-TEC 40 meter and 20 meter SSB nets.

There have been a multitude of Certificates given for 10 Checkins. There have been a multitude of Certificates given for 25 Checkins and many have already received their 50 Checkin Certificates.

Because I had to change the net times for today (ISunday), many feel that they are going to lose out on 1 or 2 checkins for today. I hope that this is not the only reason why some are disappointed with my decision for the net times to be changed for today only.

My wife Rose and I just celebrated our 52th Wedding Anniversary and we have 3 beautiful children who have all graduated college (2 of them are school teachers and 1 has a degree in Criminal Justice. My younger son is leaving for India today on a Missionary Tour and my wife and I have to drive him to the airport this afternoon. This is the reason why I had to start the TEN-TEC SSB nets 3 hours later today. I trust you can now understand.

I control the TEN-TEC Certificate Data Base and will keep everyone updated after the nets today. I love and appreciate all of you. Thank you and God bless you and your dear families.

I think some people forget that this net is run on a voluntary basis. It’s not like John K3UR canceled the net he just moved it up! “Where is the fire and who died?” I thank you for dedicating every Sunday afternoon of YOUR time to run these nets john. Now if the only reason to check into the net is for a certificate that’s is your prerogative but I would remind you this net offers much more, such as a wealth of information about Ten Tec products, Friendship, and the opportunity to share ideas and other useful information with others including at times with Ten Tec staff, Try that rice box owners!

Now as for me I am relatively new to Ten-Tec products starting with a RX-320D and then making the big jump to the Orion II and I couldn’t be more pleased with these fine products. I started the Web audio stream for the nets within the first week of joining the net to give our group the added benefit of giving users the chance to hear their stations over the air and to allow people from around the world to listen in to our fine Net and hear for themselves just how good Ten Tec radios sound and what a fine group we have.

Again I thank you John K3UR, Lloyd N2KPC and the net relays for making this one the great nets on HF!

I was really glad to make the 40 meter Net this week, even with the time change. But, never heard a peep out of the 20 Meter Net. Believe me, I was sure enough listening..... So, I Cry the Blues over the difference in band conditions and missed opportunity. Now at 35 or is it 36 Check-ins?..... I am really hoping for 50 before Christmas. But, John, I completely understand your reason and hope you had a Wonderful Day. Still Happy here but, disappointed in my station this week. What bothers me most is the fact that I am scheduled to teach a Technician Class on the Saturday morning of the Ten Tec Event..... I hope that someone will post lots of pictures.....

Mine does as well, I just crank it back until I like what I hear and I'm sure you do the same. I guess I never really paid much attention to the numbers. I did like it better when I could crank back the RF Gain and the S meter would eventually stand still letting me know I had reached the noise thresh hold. Different strokes for different folks I guess. I'm waiting for the Orion II+ to come on the market.

A very BIG thank you to K3UR and all of his relay stations for the continuing success of the Ten Tec Radio Nets. I believe someone else likened the effort to herding cats!

Thanks also to Mr. Jim Wharton and the fine folks at Ten Tec, for their ongoing support of our great *obsession* with awesome equipment and service long after the sale.

I look forward to seeing many of you at the upcoming Ten Tec Homecoming!

Reed / WW3A

Hello John,
I can reiterate what Reed said in a previous post. Also I will not be there until around 2:00pm. It's a 7 hour fast ride to TenTec. My wife loves for me to go with her but not leaving until arouind 6:30am. See you then.

Hi Ed,
I've been following this post, and maybe you have an answer.....speaking of the rf gain control, and I only have an eagle and an O-7,.... I wonder why the rf gain control on the O-7 is not like the eagle? I have the latest firmware in both, but the 0-7 S meter tracks like the old Drakes and others, as in, when you back off the rf gain to minimum, the s meter goes max. And, nearly stays that way all the way up to say...around 30%, then is seems to read high till you get past around 60%. Boy, I like the way it is on the eagle. You can have the rf gain on zero and still have an accurate s meter signal.

Any ideas on that? Or is something amiss on my O-7? I was saving this for the 27th. But here goes anyway.

Well basically I believe the way it was programmed was really due to preferences of different users. I prefer the way the Omni VII does it like you said. I've been doing this for 40 years and I guess used to way the older radios meter worked. The Orion used to be the same way at one time or another but apparently users wanted an accurate s-meter even if the RF gain was turned down to 0%. I like to turn the rf gain down during high noise conditions. If the noise level is s-9 here at my shack, I would like to turn the rf gain down until the s-meter stops fluctuating.

Like I said it's just a matter of preference. Either way it's not a big deal to me.

73's Ed…….

Topic: 779  Message: 787

Only a hunch, but I think it was just timing.
I believe Ten-Tec developed this new way of having an accurate S-Meter, regardless of attenuation or RF-Gain, AFTER the OM7 shipped.

I clearly prefer the new way. I find it outstanding. When your are trying to hear a weak station in a noisy environment, who cares what the S-meter reading is of the noise. I want to hear my signal and once I hear it, it’s nice to be able to read his signal strength off of the S-meter, regardless of other settings. WELL DONE, TEN-TEC!

Tony, I agree with you. Whether I am using my Orion II or Omni VII, I always turn the RF Gain down to 30 percent when I am running the TEN-TEC NETS.

This allows me to receive weaker signals better and also to give an accurate signal report to the stations checking in.

Rick are you coming to the Hamfest? I suppose it might be just a far drive for you! Hi……. I'm glad the S-meter works the way you like it and it really doesn't make any difference to me. As long as I can crank the RF Gain down and get rid of some noise is all I can ask out of the outstanding receivers that Ten Tec produces. I especially like the SAF Function on the Orion II for CW and really any mode as far as that goes. I started off after I moved to Kentucky in 1986 with an Omni V, Omni VI, Omni VI+, Orion, Orion II, Omni VII, and last but not least the Eagle. I still have the last three rigs in front of me and use each one as the urge hits me which one to turn on.

GM Ed,

Well I was going to come, but I couldn't afford the fuel for my Learjet. (hi)

It's always been my dream to make it to the Ten-Tec Hamfest and meet some of you guys in person, but so far the opportunity never arose.

Luckily I finally met G3TXQ at a Hamfest in England 2 years ago.

Steve's not only very smart, he's also a real nice guy. Could almost be a Yank! (hi)

I also prefer the new way the S-meter works on the Orion II. All I want the meter to do is one thing and that is tell me what the signal is at the antenna port regardless what my RF gain is set at. That’s the purpose of an “S-Meter”. As far as the RF gain control I always adjust as low as possible to get the lowest noise and best readable signal.

Now back to the original question…
When I select the RF Gain control and turn the multi knob the numbers change in multiples of 2 (50 52 54 56) is this normal? do all Orion II's do this?

Rick are you coming to the Hamfest? I suppose it might be just a far drive for you! Hi……. I’m glad the S-meter works the way you like it and it really doesn’t make any difference to me. As long as I can crank the RF Gain down and get rid of some noise is all I can ask out of the outstanding receivers that Ten Tec produces. I especially like the SAF Function on the Orion II for CW and really any mode as far as that goes. I started off after I moved to Kentucky in 1986 with an Omni V, Omni VI, Omni VI+, Orion, Orion II, Omni VII, and last but not least the Eagle. I still have the last three rigs in front of me and use each one as the urge hits me which one to turn on.

Only a hunch, but I think it was just timing.
I believe Ten-Tec developed this new way of having an accurate S-Meter, regardless of attenuation or RF-Gain, AFTER the OM7 shipped.

I clearly prefer the new way. I find it outstanding. When your are trying to hear a weak station in a noisy environment, who cares what the S-meter reading is of the noise. I want to hear my signal and once I hear it, it’s nice to be able to read his signal strength off of the S-meter, regardless of other settings. WELL DONE, TEN-TEC!

Hi Ed,
I've been following this post, and maybe you have an answer.....speaking of the rf gain control, and I only have an eagle and an O-7,.... I wonder why the rf gain control on the O-7 is not like the eagle? I have the latest firmware in both, but the 0-7 S meter tracks like the old Drakes and others, as in, when you back off the rf gain to minimum, the s meter goes max. And, nearly stays that way all the way up to say...around 30%, then is seems to read high till you get past around 60%. Boy, I like the way it is on the eagle. You can have the rf gain on zero and still have an accurate s meter signal.

Any ideas on that? Or is something amiss on my O-7? I was saving this for the 27th. But here goes anyway.

Well I guess I'm out numbered on how users like to have their S-meter read. So I have changed my mind and decided to like the way the S- meter works on the Orion and Omni VII. Hi…. All I ever get anyway is a 59 or 599 report when working the DX. Maybe we can get John Henry to fix the S-meter on the Omni VII since it's apparently broke. Hi….. I know he hasn't anything else to do in his spare time.

Next time I get to Nashville John maybe I can have an eye ball. My son lives there as well. I've been there twice this last week to go to Crest Honda to pick up some new vehicles.

CU Ya'All later and have a good one!

Hi Ed , John,
?As far as the numbers changing two at a time on the O2 cannot tell you but the recent firmware for the O1 resolved this issue. If all of O2's do that then I would tend to believe that John Henry will resolve it in a future O2 release.

Hope to see y'all next week at this time.

Only had my O2 for a week, so very interested in all posts about the radio.

I have just checked my RF gain control and goes down from 100 on evens 98, 96, 94,.....etc and when I get to 1 and go back up again it does it in 2's again but on uneven numbers, 1, 3, 5, 7.....etc to 100, gets right to 99 then jump the one to 100, so I guess I can get them all just need to turn to knob all the way up or down. Does other O2's do this as well I wonder?

Did anyone mention TT O2's are great! Sorry I don't mean to upset any other TT owners as I have only own one TT radio and this is my first one, and I am well impressed so far.

I've owned my Orion II for several years now. The RF gain counter's is just as the last post, 2 digits increments starting from 100 until 01, then back up at odd increments.

As for the S-meter movement, I prefer the latest change to the Oriion II where the meter always reads the signal.

At sometime in the future, I'm sure John Henry will find a way to dampen the movement.

As for me I do not like reseting the RF gain just to give someone an s-meter reading. My everyday setting on the Orion II is between 40/50 %. Even my Omni VII was keep low. No need to increase the noise floor, just adjust for the best signal-to-noise ratio.

PS: My Flex 1500's s-meter reads the signal strength regardless of the RF gain setting. Just like my Orion II, and Eagle.

Does other O2's do this as well I wonder?

As long as I can crank the RF Gain down and get rid of some noise is all I can ask out of the outstanding receivers that Ten Tec produces. I especially like the SAF Function on the Orion II for CW and really any mode as far as that goes. I started off after I moved to Kentucky in 1986 with an Omni V, Omni VI, Omni VI+, Orion, Orion II, Omni VII, and last but not least the Eagle. I still have the last three rigs in front of me and use each one as the urge hits me which one to turn on.

> I've been following this post, and maybe you have an answer.....speaking of the rf gain control, and I only have an eagle and an O-7,.... I wonder why the rf gain control on the O-7 is not like the eagle? I have the latest firmware in both, but the 0-7 S meter tracks like the old Drakes and others, as in, when you back off the rf gain to minimum, the s meter goes max. And, nearly stays that way all the way up to say...around 30%, then is seems to read high till you get past around 60%. Boy, I like the way it is on the eagle. You can have the rf gain on zero and still have an accurate s meter signal.

Keith, congratulations on your new Orion II. Check out my review on eHam. The Orion II remains one of the top performing radios on the ham bands.

If you have not joined our ten_ten_radio_net Group, I encourage you to do so. Thank you for supporting our TEN-TEC NETS.

# 797. Question for Orion II ANSWERED

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-09-20 17:43:53 UTC
From: <kc2qma@...>
Topic: 797  Message: 797

Original Question:
When I select the RF Gain control and turn the multi knob the numbers change in multiples of 2 (50 52 54 56) is this normal? do all Orion II's do this?

OK QUESTION ANSWERED: Yes Orion II's do this.
It's in the software not hardware. Great News! That means easy Fix!

John: Giving that TenTec has been instrumental in QRP rigs, maybe during net time you will give a call JUST FOR QRP RIGS.

I know I hear them sometime, and with the larger power from the rest of the group they can go unheard.

Jerry
ki4ps

PS: I know QRP is recognized as no more than 5 watts, but since TT did make rigs that were 10 - 25 watts that could be the cut-off.

>> Rick are you coming to the Hamfest? I suppose it might be just a far drive for you! Hi……. I’m glad the S-meter works the way you like it and it really doesn’t make any difference to me. As long as I can crank the RF Gain down and get rid of some noise is all I can ask out of the outstanding receivers that Ten Tec produces. I especially like the SAF Function on the Orion II for CW and really any mode as far as that goes. I started off after I moved to Kentucky in 1986 with an Omni V, Omni VI, Omni VI+, Orion, Orion II, Omni VII, and last but not least the Eagle. I still have the last three rigs in front of me and use each one as the urge hits me which one to turn on.

Jerry, I will make a special effort to call for QRP stations to call in. Thank you for thinking of the low power stations.

John, K3UR

All I want the meter to do is one thing and that is tell me what the signal is at the antenna port regardless what my RF gain is set at. That's the purpose of an "S-Meter". As far as the RF gain control I always adjust as low as possible to get the lowest noise and best readable signal.

From: Phil Anderson
Topic: 797  Message: 801

Even though I made the software up date on my Oll, I give 2 signal reports, 5x5 or 5x9, 599 on cw. Who cares, what are we comparing anyway? When I hear people giving reports like 20 over thru 60 over I just chuckle. Ever stop to figure out how much RF in microvolts it would take to see a true 60db over S9. Think about it.
55 yrs ago if I heard them I worked them. Still got a ton of wall paper.

Subject: [ten_tec_radio_net] Question for Orion II ANSWERED

Original Question:
When I select the RF Gain control and turn the multi knob the numbers change in multiples of 2 (50 52 54 56) is this normal? do all Orion II's do this?

OK QUESTION ANSWERED: Yes Orion II's do this.
It's in the software not hardware. Great News! That means easy Fix!

Topic: 797  Message: 802

I just like to be able to compare signals so it's nice to know that what my S-meter shows is accurate. As far as signal reports if your S-meter is accurate you can feel confidant giving a 5X9 when it's really 5x9!

BTW 50uV (micro volts) at the antenna input is S9 on the Orion II.

John Henry had posted a few months ago the next update for the Orion II will address the meter movement rate. Hopefully it will also address some of these other little qurks.

Obviously you did not understand my reply.
BTW, of course S9=50uv= -73dbm, S9+20=500uv=-53dbm, S9+40=5000uv= -33uv, S9+60=-13dbm=50000uv.
I still say, so what?
I suggest that you read "The RST Standard of Reporting" by L.B.Cebik, W4RNL. !/7/2008 WWW.cebik.com/tales/rst.  If you can not find it let me know and I will copy and send it to you. I love to teach people this subject.

Hey Phil since you see no point in having an "S-meter" On you rig may I suggests you place a piece of black tape over yours or maybe just remove it.

I guess all those radios with “S-meters” made in the past 75 years just put them there just to make you mad. HI Hi!

I still like the meter on my rig and I also like it when it’s as close to accurate as possible.

Ten Tec SSB Net - LIVE Audio Feed from Nashville, TN.

Direct link to Audio feed: http://www.qrz.com/db/KC2QMA

This audio feed will be available every Sunday from Nashville TN starting at (19:00 UTC 40M 7.261) & (20:00 UTC 20M 14.325).*Schedule & conditions permitting.

Go to the Link above and click on the play button in the video window and after a short advertisement the audio will begin to play. Some delay of the audio due to internet latency is normal.

(My station in Nashville is a Ten Tec Orion II - Wire dipole @75ft flat top)

During poor band conditions the receiver of the Ten Tec Orion II will be adjusted for best intelligible signal and may have reduced bandwidth and employ some DSP noise reduction.

Hope you enjoy and thanks for supporting the Ten Tec SSB NET!

Hello John,

I believe why sum folks are experiencing difficulty and others are not is due to preference settings.
I have my settings at the ordinary setting instead of the "newer" setting.

I have never experienced anything some of you folks have described.

Somewhere along the top of the screen should be a drop down box,
please click on that, you see a list. Select "options", then "mail accounts".
You should see check boxes for "full featured" and "basic".This is what you are looking for.

you should select basic.

I suspect that will cure your ailing browser.
Only because I and others have not and believe this selection the reason.

I was away today and only had access to my Samsung Galaxy Android phone. When I posted earlier today, I noticed that the picture of my Omni VII and Orion II on the ten_tec_radio_net Group HOME PAGE was gone and it was replaced with a hat and flowers.

That is why I had asked if anyone could get to the HOME PAGE and see the picture of my radios. When I got home today, I was able to use my home computer to get into the Management section and saw that Yahoo had completely changed the format of our ten_tec_radio_net Group.

I finally found how to put the picture back and saw that the new box was much smaller and I could only fit one radio there, so I put my Orion II on the HOME PAGE.

So, my question to all that responded to my posting earlier.....did anyone notice the change in format that was done by Yahoo? Also, did you see the hat and flower picture on the HOME PAGE when I first posted about this?

We have to get use to the new format, so let me and others know how you like or dislike the changes that Yahoo made. Thank you for your input.

Everyone just step off the Spaceship? This new Format has been in place for at least a month now. My question back then was moot. I couldn't understand why someone had not mentioned anything about the change (a month ago).

Yeah, I had problems Navigating but I was persistent enough to find it without a need for the -now generation.syndrome.

As for the Background Picture question. Ya know, I never really payed any attention to that. I suppose I was too busy trying on the - New Shoes, perhaps.

As for Yahoo in general, they are notorious for making abrupt changes on the fly. Its Par for Course. Just as ummmm Fleabay - for analogy.

See Y'all Sunday

Cheers;

Roger / KI8DU

Roger, thank you for your input. This new Yahoo format may have been in place for a month, but it just surfaced on the ten_tec_radio_net Group yesterday.

The reason why I mentioned the picture of the TEN-TEC radios being removed from our Home Page, alerted me to see that the format was changed.

As the Group Owner of this reflector, it has already made things much more difficult for me to keep up with the maintenance that is required to run a smooth spaceship.

Subject: Re: [ten_tec_radio_net] New Webpage Layout

Roger, thank you for your input. This new Yahoo format may have been in place for a month, but it just surfaced on the ten_tec_radio_net Group yesterday.

The reason why I mentioned the picture of the TEN-TEC radios being removed from our Home Page, alerted me to see that the format was changed.

As the Group Owner of this reflector, it has already made things much more difficult for me to keep up with the maintenance that is required to run a smooth spaceship.

# 831. Fwd: [ten_tec_radio_net] ten_tec_radio_net Group Policy

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-09-24 16:09:06 UTC
From: John Occhipinti
Topic: 831  Message: 831

This is a reprint of my previous post, as this subject has come up again.

-------- Original Message --------
Subject: [ten_tec_radio_net] ten_tec_radio_net Group Policy
From: John Occhipinti <k3ur@att.net>
To: ten_tec_radio_net@yahoogroups.com
CC:

The ten_tec_radio_net Group is a friendly, family oriented Group of down-to-earth Amateur Radio Operators. We have not spelled out any specific do not's, but I have made it clear that anything Amateur Radio related, is allowed to be posted here, as long as the person posting is an up to date member of the ten_tec_radio_net Group.

I have had several requests recently from those who wanted to post their own agenda here and they were not members of the ten_tec_radio_net Group. I gave them ample opportunity to subscribe to our Group and after failing to do this, I had to deny them the priviledge of posting items about their own personal things on our "elite Group".

There was no animosity on my part, but there are certain things in life called "fairness and respect". In fact if those people change their mind and join our Group, they can be free to post any Amateur Radio topic and radio gear on this Group.

As one could easily see, there are many advantages of being a member of the ten_tec_radio_net Group. So, to all of our faithful members and supporters, you are free to post any Amateur related item or gear on this Group. Thank you.

Looks to me like they have re-arranged things to allow for more advertising. I did also notice a popup or two, that I could not stop with my Norton software. Its embedded in the website. Just like QRZ.com, but at least the advertising is only on one side....so far.

Otherwise, I can live with it, and imagine there is no choice in the matter. I usually read all the posts via my email anyway. One thing I do like is having all my groups shown on the left pane and it easy to switch from one to the other.....so far anyway.

Sure wish they had said something to us users before just changing in one fell swoop! Maybe it will grow on us.

Hope to see many of you on Friday at Ten Tec.

--- In ten_tec_radio_net@yahoogroups.com, <ten_tec_radio_net@yahoogroups.com> wrote:

I was away today and only had access to my Samsung Galaxy Android phone. When I posted earlier today, I noticed that the picture of my Omni VII and Orion II on the ten_tec_radio_net Group HOME PAGE was gone and it was replaced with a hat and flowers.

That is why I had asked if anyone could get to the HOME PAGE and see the picture of my radios. When I got home today, I was able to use my home computer to get into the Management section and saw that Yahoo had completely changed the format of our ten_tec_radio_net Group.

I finally found how to put the picture back and saw that the new box was much smaller and I could only fit one radio there, so I put my Orion II on the HOME PAGE.

So, my question to all that responded to my posting earlier.....did anyone notice the change in format that was done by Yahoo? Also, did you see the hat and flower picture on the HOME PAGE when I first posted about this?

We have to get use to the new format, so let me and others know how you like or dislike the changes that Yahoo made. Thank you for your input.

I guess I should say I do like some things about the new Yahoo format. But they should have included the moderators and users feedback in the upgrade process.
Funny that now after the update they want to hear from us users and moderators.

Roger, thank you for your input. This new Yahoo format may have been in place for a month, but it just surfaced on the ten_tec_radio_net Group yesterday.

The reason why I mentioned the picture of the TEN-TEC radios being removed from our Home Page, alerted me to see that the format was changed.

As the Group Owner of this reflector, it has already made things much more difficult for me to keep up with the maintenance that is required to run a smooth spaceship.

---In ten_tec_radio_net@yahoogroups.com, <dave.drake@...> wrote:

Looks to me like they have re-arranged things to allow for more advertising. I did also notice a popup or two, that I could not stop with my Norton software. Its embedded in the website. Just like QRZ.com, but at least the advertising is only on one side....so far.

Otherwise, I can live with it, and imagine there is no choice in the matter. I usually read all the posts via my email anyway. One thing I do like is having all my groups shown on the left pane and it easy to switch from one to the other.....so far anyway.

Sure wish they had said something to us users before just changing in one fell swoop! Maybe it will grow on us.

Hope to see many of you on Friday at Ten Tec.

I was away today and only had access to my Samsung Galaxy Android phone. When I posted earlier today, I noticed that the picture of my Omni VII and Orion II on the ten_tec_radio_net Group HOME PAGE was gone and it was replaced with a hat and flowers.

That is why I had asked if anyone could get to the HOME PAGE and see the picture of my radios. When I got home today, I was able to use my home computer to get into the Management section and saw that Yahoo had completely changed the format of our ten_tec_radio_net Group.

I finally found how to put the picture back and saw that the new box was much smaller and I could only fit one radio there, so I put my Orion II on the HOME PAGE.

So, my question to all that responded to my posting earlier.....did anyone notice the change in format that was done by Yahoo? Also, did you see the hat and flower picture on the HOME PAGE when I first posted about this?

We have to get use to the new format, so let me and others know how you like or dislike the changes that Yahoo made. Thank you for your input.

The TEN-TEC 40 meter SSB Warmup Net was in progress at 18:00 UTC on 7.261 with many checking audio, mic settings, QRP rigs and asking questions about TEN-TEC products. We were priviledged to have Bob K4TAX on and he answered several questions.

The TEN-TEC 40 Meter SSB Net started at 19:00 UTC on 7.261 and we had 89 people check into the net. The TEN-TEC 20 Meter SSB Net started at 20:00 UTC ON 14.325 and we had 85 people check into the net, including Luc, ON6XA from Belgium.

Congratulations to the 2 new 10 Checkin Certificate Winners:

AI0D Bill AZ

WA4YZW Charlie MO

Congratulations to the new 25 Checkin Certificate Winner:

W4FOA Tony GA

Congratulations to the new 50 Checkin Certificate Winner:

KB2YOA Gaye NJ (This is N2KPC Lloyds wife)

We also had 26 new people check into the nets today.

A total of 1067 different people have checked into the nets since January 20, 2013, when the TEN-TEC Certificate Program started.

Remember this Friday and Saturday September 27th and 28th is the 13th Annual TEN-TEC Homecoming Hamfest in Sevierville, TN. I will be speaking at the TEN-TEC Net Forum at 12PM (Noon) Eastern Time on Friday and this will be followed by a Special Event 40 Meter SSB Net at 1PM Eastern Time on 7.261. I am looking forward to checking many of you guys and gals into this Special Event Net.

Everyone that checks into this Special Event Net will receive a beautiful QSL Card from TEN-TEC, mailed in a separate envelope, compliments of Jim Wharton NO4A, Vice President TEN-TEC Inc. I will also be awarding double checkin credits for everyone that checks into this Special Event Net.

All those attending the Hamfest will also qualify for the special QSL card and the double checkin credits by signing into my Special Event Log Sheet on my table. Everyone wins!

Have a safe trip and may God bless everyone and their families this weekend. Thank you for your support, as it means a lot to me and also to TEN-TEC Inc.

Hi Andy,
For what its worth,... I used one on a 6n2 from the Bahamas a few years back with excellent results. Made lots of contacts and got excellent audio reports Also used it on a scout and same results. I used mine, at that time with a TT 705 microphone. That processor makes a 20w rig a near 100w equivalent radio. I still have mine, and use it on my Omni Vii and eagle from time to time. I will say that it is somewhat touchy to set up sure worked great for me. I mainly keep mine for dx work, and when I go portable. Hope it finds a good home. You have it at a very fair price.
Good luck,
73,
Dave

---In ten_tec_radio_net@yahoogroups.com, <k3ur@...> wrote:

The 2013 TEN-TEC Homecoming Hamfest is now history. This was the 14th Annual TEN-TEC Hamfest and it was a very eventful filled gathering of elite Amateur Radio Operators from many states.

My wife and I arrived in Sevierville, TN on Thursday after a nice 4 1/2 hour ride from our home in Mableton, GA (20 miles Northwest of Atlanta).

Several people sent me emails and said that they did not see me at the Hamfest, so I decided to tell what I was doing at the Hamfest for the 2 days:

On Thursday (9AM I met with Jim Wharton, NO4A, Vice President TEN-TEC Inc. We were in his office discussing the TEN-TEC Nets, the Certificate Program, the TEN-TEC Forum and the Special Event QSL cards that were to be sent out to the net checkins at 1PM and those attending signing in on my Special Event Signin Sheet.

At 10AM I took the tour of the TEN-TEC Factory.

At 11AM I met with the President of TEN-TEC Inc. in his office. Jack Burchfield K4JU and I had a very interesting dialogue about how he started in Amateur Radio and how he became one of the founders of TEN-TEC Inc.

At 12Noon, I spoke at the TEN-TEC SSB Net Forum for 35 minutes, telling how I was able to start up the TEN-TEC nets again in April 2012 after serveral years of no nets. I also told how the ten_tec_radio_net Group was formed and why it was necessary in order to keep our TEN-TEC SSB net members in touch with each other. I also discussed the TEN-TEC Certificate Program.

There were a number of new prople at the Forum who asked questions about the net times and frequencies and also about our ten_tec_radio_net Group.

At 12:40PM I started up the TEN-TEC Special Event Net on 7.261 using the Omni VII. I continued to take checkins until around 2PM and turned the rest of the net over to Lloyd N2KPC.

At 2:30PM I had a meeting with one of the TEN-TEC Engineers and it was a very enlightning discussion.

At 3:30PM I had a discussion with Stan Brock, TEN-TEC Sales Manager. Aside from Amateur Radio, Stan and I have a lot of things in common and this is always a very inspirational time.

In between all of these activities I had the pleasure of meeting many of our net members and other people who were interested in joining our nets.

On Saturday at 8:30AM, I met with many members of our nets and ten_tec_radio_net Group.

From 10AM to 12Noon, I spend time in the Tailgaters Section and again met many people that I knew and also many new ones.

At 12Noon I attended the Radio Forum hosted by Rob Sherwood (A great learning experience).

At 1PM I had another meeting with one of the TEN-TEC Engineers and spent time demonstrating the Omni VII to many interested people.

The rest of the day was spent inside the TEN-TEC sales showroom, speaking to John Henry, Stan Brock, Jim Wharton and many other Amateur Radio Operators attending the hamfest.

I also found time to spend some time with Lloyd N2KPC and John KC2QMA. as we discussed the TEN-TEC SSB Nets.

---

Now for the important business: We had 65 people check into the Special Event 40 meter SSB net on 7.261 at 1PM.

Congratulations to the new 10 Checkin Certificate Winner:

K4RF Dan NC

Congratulations to the new 25 Checkin Certificate Winner:

N4MJ Glenn TN

Congratulations to the new 50 Checkin Certificate Winner:

KI8DU Roger WV

I will post the new Certificate Data base tomorrow. Thank you for your support.

Date: 2013-09-30 16:54:08 UTC
From: <kc2qma@...>
Topic: 856  Message: 856

Hello all, I had a great time at the Ten-Tec Homecoming hamfest this year. Although I have been to Ten Tec before I had never made it to the hamfest until this year. It was my great pleasure to finally meet in person John K3UR and his lovely wife and Lloyd N2KPC and his lovely wife as well. I met with some of the fine Ten Tec Net members too.

I also spent some time talking to some of the Ten Tec staff and had some fun and insightful conversations with the VP of Ten Tec Jim Wharton, Stan Brock (sales), Paul Clinton (Service manager) and John Henry (Software Engineer.) Rob Sherwood gave a great talk about receiver performance. John K3UR Net Control of the Elite Ten Tec Nets talked about how the nets membership has grown and how it has become a great asset to the Ten Tec Company and its users alike.

The hamfest behind the factory was also a great time for me there were many great treasures to be found and I met so many friendly hams. There was a bit of everything to be found from towers to small electronic parts. I learned quickly that you have to jump on that great deal or someone else will!
Ten Tec is in my opinion the finest amateur equipment maker in the world. Where else can you have a face to face conversation with the very people that design and build this fine equipment? Also how many other companies continue to service and support products that in some cases have even been discontinued! There are many new and exciting things to come from Ten Tec in the near future. Eagle, Omni VII, Orion Classic and Orion II users will love the new software that will be available soon. It will improve the performance of these radios quite a bit. Future updates will continue to come from Ten Tec for many of these transceivers for the foreseeable future and will address many of the requests from the users.
So in summery my experience at the 14th annual homecoming hamfest was a great one and I must say I am so proud to own Ten Tec products and be a member of this community. I consider myself a true American patriot and believe “If you are going to talk the talk you need to walk the walk and buy USA made products whenever possible” that is how I do my part in supporting the American worker and economy.

73’s for now.

Subject: [ten_tec_radio_net] John KC2QMA With my 14th Ten Tec Hamfest Story.

Hello all, I had a great time at the Ten-Tec Homecoming hamfest this year. Although I have been to Ten Tec before I had never made it to the hamfest until this year. It was my great pleasure to finally meet in person John K3UR and his lovely wife and Lloyd N2KPC and his lovely wife as well. I met with some of the fine Ten Tec Net members too.

I also spent some time talking to some of the Ten Tec staff and had some fun and insightful conversations with the VP of Ten Tec Jim Wharton, Stan Brock (sales), Paul Clinton (Service manager) and John Henry (Software Engineer.) Rob Sherwood gave a great talk about receiver performance. John K3UR Net Control of the Elite Ten Tec Nets talked about how the nets membership has grown and how it has become a great asset to the Ten Tec Company and its users alike.

The hamfest behind the factory was also a great time for me there were many great treasures to be found and I met so many friendly hams. There was a bit of everything to be found from towers to small electronic parts. I learned quickly that you have to jump on that great deal or someone else will!
Ten Tec is in my opinion the finest amateur equipment maker in the world. Where else can you have a face to face conversation with the very people that design and build this fine equipment? Also how many other companies continue to service and support products that in some cases have even been discontinued! There are many new and exciting things to come from Ten Tec in the near future. Eagle, Omni VII, Orion Classic and Orion II users will love the new software that will be available soon. It will improve the performance of these radios quite a bit. Future updates will continue to come from Ten Tec for many of these transceivers for the foreseeable future and will address many of the requests from the users.
So in summery my experience at the 14thannual homecoming hamfest was a great one and I must say I am so proud to own Ten Tec products and be a member of this community. I consider myself a true American patriot and believe “If you are going to talk the talk you need to walk the walk and buy USA made products whenever possible” that is how I do my part in supporting the American worker and economy.
73’s for now.
KC2QMA
John Magliano

I have found a picture of the former TEN-TEC Net Control Operator, Mr. Dudley. This picture of Dudley, my wife and myself was taken at the 2008 Dayton Hamvention, when I was a big fan of Flex Radio. Dudley was already working for Flex Radio and I did not know at that time that Dudley was the former Net Control for TEN-TEC.

This shows that Dudley had already left TEN-TEC before this date (2008). So when I started back up the TEN-TEC nets in April 2012, they were dormant for at least 4 years.

Some of the older net members will remember Dudley. That was the past, but this is the present and the future and we are looking forward to great things for TEN-TEC Inc. the TEN-TEC SSB Nets and for the ten_tec_radio_net Group.

Topic: 863  Message: 863

I have an interest in a TENTEC 10 METER SSB NET to bring in new Hams to the world of the TENTEC Family.
The Boy Scouts have been asking about the 10 Meter band and where they can talk to other Hams after a TENTEC Eagle Demo.
Several new Hams young and old are looking for information on where they can talk to people on the air and try out HF for the first time.
So please look around you for a Technician Class Ham or future Ham to get on the air.
You never know, it might be the spark to get a member of your family to finally become a Ham.

So will see how it goes with the band conditions and the time and check ins.

This Sunday 10-6-2013 on or about 28435,0 MHZ USB at 2130 UTC.
5:30 PM Eastern, 4:30 PM Central or after I have finished the 20 TENTEC SSB NET for John, K3UR.
I will be using a Force 12 Yagi with 13 elements at the DVRA Shack or my Tennadye Log Periodic and the V-Quad stacked above it at my QTH.if the weather gets bad because it a 45 min. drive to West Trenton, NJ from my QTH
in Mount Holly, NJ.
The TENTEC Homecoming Hamfest 2013 Was the best Hamfest that my Wife, Gaye, KB2YOA and Myself Lloyd, N2KPC could wish for.
We had the pleasure to meet many of the people on the air that have checked in to the TENTEC SSB NET and everyone had a great time and the TENTEC Staff worked very hard to make it right, and they did just that.
It took a lot for us to get there and it was worth it mile and penny.
I know that some of you could not make it and we wish that you had.
But, We will enjoy your company on the air and hope we can all make it next year.
I want to thank Doug, W9NWN for some great ideas and his company.
Thank You to TENTEC's VP Jim Wharton, Sales, Stan Brock and everybody at TENTEC for going above and beyond the call of Duty.
Thank's to John, KC2QMA for recording John's, K3UR's excellent program on the TENTEC SSB NET which is on youtube. That was great for those of you that could not attend.
Anyway, hope to see some new Hams on the TENTEC 10 Meter SSB Net.
Work on it, look around because we all will need replacements someday, HiHi.
And don't for get the CW Net too.
May the TENTEC's be with you, HiHi
God Bless You and Yours,
Thank You for being there for TENTEC and your Net Control Stations.
73,
Lloyd N2KPC

hello all,

this is a reminder the Ten Tec CW net begins tonight at 23.30 (7:30PM Eastern Time).

we meet on 7063 (+/-).

This is a slow speed, informal but controlled net.

You exchange name, rst, qth and radio and any brief comments.

I also want to thank John for allowing me to post.
Thank you John.

Ten Tec SSB Net - LIVE Audio Feed from Nashville, TN.

Direct link to Audio feed: http://www.qrz.com/db/KC2QMA

This audio feed will be available every Sunday from Nashville TN starting at (19:00 UTC 40M 7.261) & (20:00 UTC 20M 14.325).*Schedule & conditions permitting.

Go to the Link above and click on the play button in the video window and after a short advertisement the audio will begin to play. Some delay of the audio due to internet latency is normal.

(My station in Nashville is a Ten Tec Orion II - Wire dipole @75ft flat top)

During poor band conditions the receiver of the Ten Tec Orion II will be adjusted for best intelligible signal and may have reduced bandwidth and employ some DSP noise reduction.

Hope you enjoy and thanks for supporting the Ten Tec SSB NET!

Ron,

This is a great idea and an opportunity to hone our fists. While most of my hamming is on cw, I have no cw net experience. My net vocabulary is limited to qni and qru and I'm sure I'm not alone. That said, how about sending off some notes on cw net protocol? 73

Thank you!

The goal is to promote CW activity and encourage inexperience ops to participate
and gain experience.Thus the name, "slow speed net".

To begin,

u will hear
"cq cq cq ten tec net de wb1hga NCS (net control station) QNI (looking for check-ins) K"

You (stations) will reply with their call; I will acknowledge then "QNI?" looking for nx
station and so forth.

If anyone hears a station NCS cannot hear, send "QNB" and ur call.
NCS will send "K". u proceed to gather info; when done, u agn call "QNB" and ur call.
NCS will acknowledge and you then proceed with that info.

The exchange is name, qth (state only is fine) RST, radio and (if u wish) any brief
comments.

Please zero beat to my signal.

"see" u.Sunday night.

Ron, wb1hga

Thank You K3UR, John for your hard work first of all.
The TENTEC 10 Meter SSB NET even with a CA QSO Party Contest going on.
We had 24 checkins starting with VA7ZR, Tony BC, Canada on the west coast of Canada. ZL1CDX Turner fron New Zealand and Ben,H70ORO from Nicaragua.
We also had AZ,PA,NV,ID,TN,NJ,WA,and NM as well..
I received many emails from stations that could not hear thru the contest.
I had to drop to 28433.0 then back to 28435.0 after the contest was over with.
See you all This coming Sunday 10-13-2013 at 21:30 UTC, 5:30 PM Eastern,4:30 Central. on 28435.0
Thank You for your support.

# 877. Orion II 566V3.033xd released

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-10-10 20:48:55 UTC
From: <kc2qma@...>
Topic: 877  Message: 877

I just posted 566V3.033xd firmware update for the Orion II Model 566.
Changes include:
Version 3.033xd July 9, 2013
Modified pseudo AGC attack so that it is more resistant to loading upon impulse noise

You can find it at the downloads section of our website.
Go to http://www.tentec.com/ http://www.tentec.com/
Cursor over "Downloads" (towards the right)
When you see the selection list pop up, left mouse click on "Transceiver Downloads" Scroll down until you see the 566 section.
The update installer is on the right column of the screen, and the revision history is towards the top of the 566 section in the middle column on the screen.

This change will help maintain constant receiver level through impulse noise. It helps the Noise Reduction algorithm behave better as well since it now receives audio without the "loading agc" effect it previously had.

Care should be taken to not engage DSP functions that aren't necessary though. e.g. if you really don't have any impulse noise or electrical fence noise, then don't engage the NB, either DSP NB or HW NB. etc.

Thanks, and 73,
John Henry, KI4JPL
TEN-TEC Engineering
---
Just a reminder to all after you install you need to do a RAM Clear, Master Reset and Re-Calibrate your S-meter again.

Then go through all of the menus and enable all of your installed filters

Thank you John "You Are The Man"!

STEPS FOR AN EASY SOFTWARE UPDATE

Updating the firmware on your Orion II is easy when you follow these basic steps.

First thing I recommend is to go through all of the menus and write down all of your personal settings because these will be reset to factory default's during the update procedure. You could also take photos of the various screens.

Now let's get the latest software for our Orion II from the Ten-Tec Website.
https://www.tentec.com/content/downloads/manuals/566/566-Setup-3.033xd.exe
https://www.tentec.com/content/downloads/manuals/566/566-Setup-3.033xd.exe

Here are the instructions on how to run the update program.
https://www.tentec.com/content/downloads/manuals/566/HowTo.txt
https://www.tentec.com/content/downloads/manuals/566/HowTo.txt

Now let's do the Master rest & Memory clear. Always do the Ram Clear First!

RAM CLEAR: With Orion II power off press and hold the VFO B LCK button while turning on the Orion II power switch. You will see a message "Master Reset Complete". Then you will see a message "RX366 Installed?" If you have an RX-366 sub receiver installed press YES if not press No.

MASTER RESET: With Orion II power off Press and hold the MAIN RX/TX button below the TT logo while turning on the Orion II power switch. You will see again the message "Master Reset Complete".

Then you will see "Clear User Memories" select yes by pressing the AN button.

Now you will see the message "Reset Optional Filters" select Yes by pressing the AN button.

You will again see the message "RX366 Installed" select yes by pressing the AN button.

Once the Orion II boots up completely you should see 14.250 on the frequency display.

To verify that the Orion II ready for use power off the Orion II and then power ON.

OK almost done. Now we need to Re Calibrate the S-Meter and get all of our menu settings back the way we want them.
S-METER CALIBRATION: Here is a link to the calibration procedure.
https://www.tentec.com/content/downloads/manuals/566/S-Meter%20565%20566%20Calibration%20Procedure.pdf https://www.tentec.com/content/downloads/manuals/566/S-Meter%20565%20566%20Calibration%20Procedure.pdf

Now remember when I said to copy all of your menu settings in the beginning now is when we will refer back to them.

Let's start with enabling the filters by pressing "Menus" then "Filter". This will vary for each user depending on what filters you have installed in your Orion.

Now go though each of the menus and set everything back to the way they were before the firmware update.

Here are some quick links to the Ten Tec Website:

kc2qma@... wrote:

I just posted 566V3.033xd firmware update for the Orion II Model 566.
Changes include:
Version 3.033xd July 9, 2013
Modified pseudo AGC attack so that it is more resistant to loading upon impulse noise

You can find it at the downloads section of our website.
Go to http://www.tentec.com/ http://www.tentec.com/
Cursor over "Downloads" (towards the right)
When you see the selection list pop up, left mouse click on "Transceiver Downloads" Scroll down until you see the 566 section.
The update installer is on the right column of the screen, and the revision history is

towards the top of the 566 section in the middle column on the screen.

This change will help maintain constant receiver level through impulse noise. It helps the Noise Reduction algorithm behave better as well since it now receives audio without the "loading agc" effect it previously had.

Care should be taken to not engage DSP functions that aren't necessary though. e.g. if you really don't have any impulse noise or electrical fence noise, then don't engage the NB, either DSP NB or HW NB. etc.

Thanks, and 73,
John Henry, KI4JPL
TEN-TEC Engineering
---
Just a reminder to all after you install you need to do a RAM Clear, Master Reset and Re-Calibrate your S-meter again.

Then go through all of the menus and enable all of your installed filters

Thank you John "You Are The Man"!

Isn't it nice to have some to do on a Sunday afternoon and to look forward to.
This is something that the old timers dreamed about.
Look around and find a inactive Ham or a future Ham, maybe a New Ham and let them know about
The TENTEC NETS.
When you talk to DX like I did today that were using a TENTEC Radio let them know too.
They can check in on 20 and the 10 Meter nets.
I had a lot of New Hams here in NJ at the W2ZQ Club Station and they worked a lot of DX on the Eagle with the
Regal 707 Desk Mike and the newest Ham of them all said I will check in tomorrow and is ordering a Eagle with
the Regal soon. But most of all He like hear the TENTEC NETS and the live stream on QRZ by John, KC2QMA on QRZ. The Nets have help as a new way to bring new people in to this Club.
Try it with your Club and maybe you will have the great luck that we have had here in NJ with ours.
It has brought in new members young and old. Seven new ham today and they will be here tomorrow
at Net time. You make it happen, all of you when YOU check in and help the Net,
Thank You All,
Lloyd N2KPC

If there was ever an example of progress, it is evident by the activity with TEN-TEC Inc., the faithful TEN-TEC Ambassadors and the loyal TEN-TEC customers.

Since April of 2012 we have progressed from no TEN-TEC Nets to 5 TEN-TEC Nets.

*40 meter SSB Warmup Net, Sunday 18:00 UTC (2PM Eastern Time) on 7.261.

*40 meter SSB Net, Sunday 19:00 UTC (3PM Eastern Time) on 7.261.

*20 meter SSB Net, Sunday 20:00 UTC (4PM Eastern Time) on 14.325.

*10 meter SSB Net, Sunday 21:30 UTC (5:30PM Eastern Time) on 28.435 (N2KPC).

*40 meter CW Net, Monday 23:30 UTC (7:30PM Eastern Time) on 7.063 (WB1HGA).

My responsibility as a licensed Amateur Radio Operator is to be a Good Will Ambassador for Amateur Radio, leading by example and assisting and encouraging other Ham Radio Operators.

My responsibility as Net Control for the TEN-TEC 40 meter and 20 meter SSB Nets is to promote harmony and to assure all of our net members that their opinion counts.

My responsibility as Group Owner of the ten_tec_radio_net Group is to keep our members informed of our up to date activities. Also allowing them to freely post anything that is

Amateur Radio related. Also to make sure that each member receives the correct number of checkins and to assure them that their TEN-TEC Certificates will be sent to them in a timely manner.

TEN-TEC Inc. is not standing still. They are doing what no other Amateur Radio Company is doing, by providing updates to both present and discontinued radios. Also, no other company has one of their Software Engineers answering questions and posting pertinent information on the various reflectors. I know of only one person and his name is John Henry, TEN-TEC Engineer. God bless him for his extra efforts.

QSL Card Status: Jim Wharton NO4A, Vice President TEN-TEC Inc. has informed me that all of the TEN-TEC 2013 Homecoming Hamfest Special Event QSL cards have been mailed out. Jim was assisted by Stan Brock, TEN-TEC Sales Manager, because of the large number of QSL cards that had to be inserted into envelopes and mailed.

Those who checked into the Special Event 40 meter SSB Net during the Hamfest and those attending the Hamfest who signed my Special Event Log In Sheet at the Hamfest, will be receiving one of these beautiful QSL cards.

Those who qualified for the 10 Checkin, 25 Checkin and 50 Checkin Certificates from last Sunday's nets will be receiving their Certificates, as they will be mailed out on Monday.

ATTENTION: More good news to be released in the next few days! Thanks to all for your support.

Ten Tec SSB Net - LIVE Audio Feed from Nashville, TN.
Direct link to Audio feed: http://www.qrz.com/db/KC2QMA http://www.qrz.com/db/KC2QMA

This audio feed will be available every Sunday from Nashville TN starting at (19:00 UTC 40M 7.261) & (20:00 UTC 20M 14.325).*Schedule & conditions permitting.
Go to the Link above and click on the play button in the video window and after a short advertisement the audio will begin to play. Some delay of the audio due to internet latency is normal.
(My station in Nashville is a Ten Tec Orion II - Wire dipole @75ft flat top)
During poor band conditions the receiver of the Ten Tec Orion II will be adjusted for best intelligible signal and may have reduced bandwidth and employ some DSP noise reduction.
Hope you enjoy and thanks for supporting the Ten Tec SSB NET!

# 887. Omni VII firmware Version 1035h

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-10-13 22:07:50 UTC
From: <dave.drake@...>
Topic: 887  Message: 887

Hi everyone,
Great net today John. Good information today on TT Engineering progress and the great work they do keeping our rigs up to date.

With reference to the Omni VII, John Henry has posted a "beta" version (meaning its not yet an official release) said to primarily improve the remote operation and may improve the agc "pulse" issue as well. As it is beta, you can try it out and simply revert back to an earlier version to suit your needs. Or,..simply wait till its an official release and is posted on the TT website.

He has made the offer to those who wish to give it a go, so feel free. Its on the Yahoo Groups site for the Omni VII. You will need to join the group to get access to the file, I believe. But here is the link.
http://groups.yahoo.com/neo/groups/Ten-Tec-Omni-VII/files/O7%20Firmware
http://groups.yahoo.com/neo/groups/Ten-Tec-Omni-VII/files/O7%20Firmware

You want the last one, the 1035h. I don't believe he's posted one as yet for the Eagle. When he does I'm sure he will make it known to us.

From: <jhenry@...>
Topic: 887  Message: 889

Dave,

You are correct.
These various Analog Devices DSP based radios share very similar if not identical code in certain areas. The signal processing area is one of them, and the way the agc is handled is handled is a good example.
With that being said, I wanted to ensure that the change we made in the 565 and the 566 (Orion and Orion II) is sufficient. Sometimes when we release something that changes how this type of data is handled, when it goes into a few hundred different setups, we find areas that it improves, and other areas that it doesn't, and actually degrades for some.
So, with that being said, we wanted to ensure that it is working well enough in the two current releases before we send it out to the others.
1.035h is a beta for the 588 OMNI-VII, and yes, anyone that wants to try it out, go for it.
If you are bothered by the agc killing your audio due to quick QRN or impulse noise or electric fences or ignition or??? then try it out and let us know if it fails. That is the most important piece of info. Once I know areas where it is failing, I can get with that individual and see what else is turned on and running and even capture audio to try to isolate / fix.
If all goes well, it will soon go into the 599 and 539.
I believe another week would be good to just let the existing releases (including the beta) fly before I attack the 599/539.

Thanks, and 73,
John Henry, KI4JPL

Subject: [TenTec] Orion / Orion II updated reports, NB/NR/etc
From: John Henry <jhenry@tentec.com>
To: Discussion of Ten-Tec Equipment <tentec@contesting.com>
CC:

Hello All,

I have had a few reports from customers that the receive audio sounds just the same as it did before regardless of QRN or impulse noise.

Well, let's look at those "same as before" customers specifically.
This set of customers ran the HW Noise Blanker on all of the time anyway just because they liked how it sounded with it on.
That is fine, but, remember what the change for AGC and QRN / impulse noise really fixed.
In the previous release, WHEN there was QRN or Impulse Noise or ignition or whatever, the AGC would falsely load up bringing audio level way way down in an instant, and then return after a second or so, making it interesting to copy or understand when there was QRN or impulse noise.
These customers, by keeping HW NB on all of the time, were taking out the QRN before it ever made it to the DSP.
So, no QRN to react to, this meant no loading up of the AGC.
So, for them, this change, was almost a "no change".
For others, who never use the Software Noise Blanker or the Hardware Noise Blanker, the reports are that the audio doesn't load up anymore, but they hear the QRN or impulse noise.
Well, the answer to that is, in my opinion... turn on the HW Noise Blanker.
Then you won't hear the QRN.
There are other techniques, e.g. Orion and Orion II users have the SAF feature that they can turnon, which can be dialed up to "boost" the audio in the "audible tones" area that they want to listen to, and in a lot of cases, the extra qrn/crap will get attenuated, not always, but some of the time.

A word about Noise featuring.

They all work on different types of noise differently.

Noise Blanker
This is meant to work on impulse noise, stuff that is very short (VERY short duration), and sometimes very dramatic in amplitude versus the normal audio/noise floor. It is very aggressive and things that pop up very quickly and go away that are dramatic, get removed. The Software Noise Blanker in the Orion I/II and OMNI-VII are adjustable in their aggressiveness. The Software Noise Blanker is one of the first things done to the signal, and works on IF BEFORE AGC is applied. Hence, previous builds, if SW NB was turned on, AGC would not load up on QRN. Hardware Noise Blanker in the Orion I/II and Eagle does the same, a much better job though. Again, before the DSP does AGC, hence, if HW NB was on, it would not have loaded up the AGC.
Either one do affect the audio though, and it is really recommended that unless you need it, don't use it. Some use it because it makes the RX sound smoother, well, it will, but it may be due to the fact that they are removing a bit of QRN and in previous builds, the QRN would be enough to load the AGC and cause some RX level changes, which sounded rougher.
My advice with the Orion and Orion II latest releases and the OMNI-VII beta 1.035h, turn them off and see how well the audio now sounds. Again, it is subjective, if you do hear the QRN now, you should of course pick the NB of choice. I vote for HW NB, but, aggressiveness and effect is up to your ears, and your ears only.

Noise Reduction.
Noise Reduction is meant to adaptively over time adjust reception of broadcasted signals so that noises that are there all of the time get taken away. May not be a good description, but, the thing to note.... it is an iterative process over time, so, unlike NB that just "nails" impulses, NR will adjust the audio until noise that contributes to non-legibility will slowly go away. The faster you want it to go away is adjustable. This has a side effect, making it more aggressive can really ramp up/down the effectiveness. With the previous builds, when you had the NB's turned off, and you had QRN, well, the NR routine will process that QRN as well, not a big deal, but the big deal was the processing of the "AGC loaded up" time as well. So it's effectiveness in a QRN free environment might be excellent, but in an environment that has occasional QRN, well, not as good, and then more periodic QRN, well, it should never be used.
Now, with the latest releases for the Orion and the Orion II, this effect is removed. SEVERAL comments coming in on how we have made such a great improvement in the NR. Well, we didn't touch the NR, but we did change the data going to the NR algorithm... before.... garbage in = garbage out...
Now, it is a bit more effective. Probably needs some more attention itself down the road, but, time will tell.
Noise Reduction works on data later in the DSP chain than the Noise Blanker does.
It is also performed after AutoNotch and Manual Notch. The reason is to clean out tones and stuff you don't want to hear before the NR takes effect. In the case of FM it is done before deemphasis is applied.

The important thing to remember, it is done after NB, and also after AGC would have loaded up in previous releases. So, in the latest releases of the Orion and Orion II, and the beta OMNI-VII 1.035h, it has a cleaner input to the algorithm than it did before.

Now, granted, there are those that say they never have and never will use any kind of DSP NR/NB/whatever function to act on data.
Their tools are the bandwidth, PBT, and for the Orion / Orion II they may use SAF, Hi-Cut, Lo-Cut etc to "filter" the edges and boost the internals of what they are listening for, and their own mind to pull the audio out they are listening for.
I myself am a big fan of hardware Noise Blankers BUT, only WHEN NEEDED, and a lesser fan of Software Noise Blankers (but they do perform, just not as clean as HW does), and not so much a fan of Noise Reduction UNLESS absolutely necessary. The OMNI-VII for me cuts out 90% of what I'd ever want with it's software featuring and roofing filters.

Brought up this stuff above because I think it is a good ground for discussions of experience amongst the group. Don't need to keep this title, respond with a title that makes sense for the specific area you want to comment on... or not... up to you.

Thanks, and 73,
John Henry, KI4JPL

The Ten Tec CW Net will happen tonight at 7:30 PM (eastern Time) on 7063 +/-.

The goal is to promote CW activity and encourage inexperience ops to participate and/or practice.Thus the name, "slow speed net". All u need to know is
QRS = send slower
QNB = relay
QNI = check-in now

Protocol as follows:

u will hear
"cq cq cq ten tec net de wb1hga NCS (net control station) QNI (looking for check-ins) K"

You (stations) will reply with their call; I will acknowledge then "QNI?" looking for nx station and so forth.

If anyone hears a station NCS cannot hear, send "QNB" and ur call.
NCS will send "K". u proceed to gather info; when done, u agn call "QNB" and ur call.
NCS will acknowledge and you then proceed with that info.

The exchange is name, qth (state only is fine) RST, radio and (if u wish) any brief comments.

Please zero beat to my signal.
"see" u.tonight.

Ron, wb1hga

Were you running both Noise Blanker's on the main receiver and SAF or notch engaged when you powered down? Power back up, shut off one of the noise blanker's and see if you get her back.

Subject: [ten_tec_radio_net] orion 565 no main receive

Hi Fellas,

I just got done using the radio for the Pa-QSO contest and the main receiver stopped receiving or transmitting . The sub-receiver still works fine . It didn't overheat from alot of use .

I did a master-reset but it's still the same . It's running the 3.032 version not that that should matter .

Any suggestions would be helpful .

# 900. 10m SSB Net/10m overall

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-10-15 13:24:49 UTC
From: <dave.drake@...>
Topic: 900  Message: 900

Hi,
Unfortunately, last Sunday evening, I was unable to hear net control on the 10m net. I guess I'm just too close to Lloyd to hear. It did look like signals were all going right over me, and that the band was obviously too long. Sorry Lloyd that I was unable to assist you. Pretty well the same for 20m. It has to be pretty short to hear John or Lloyd here.

At any rate, I will say, I've had the most fun on 10m since I was on St. Lucia in December 2011 working pileups. I did work Afganistan on 10m yesterday. Quite a treat for me. We are very fortunate for the recent upswing in sunspot activity/solar flux. As I understand, some scientists are saying we may be headed for a new "Munder Minimum", and this may be the last significant sunspot cycle in our lifetimes.

If true, I recommend any of you that are not on 10m/12m or 15m these days to get on and have some fun while it lasts. If not, you are really missing some unique openings.

Lastly, I'll put in a plug for the TT 715 processor. I find that its a real pileup buster. Way better than the SP in the rig (o-7).

The TENTEC 10 Meter SSB Net on 28.435 USB had 22 check ins with
the Following States checking in. 2-CO, 1-AZ, 2-NM, 3-TX, 1-UT, 1-MT, 1-PA, 11-NJ.
I want to thank everybody that checked in and those who tried to do to conditions.
The 10 meter net allowing some new Hams to check in and that was great.
It was a Honor to hear the normal check ins help the new Hams to make them feel
at home on the HF Bands.
See you next Sunday on 28.435 USB at 21:30 UTC 5:30 PM Eastern, 4:30 PM Central
Check out the Antenna systems on QRZ via N2KPC.
If you don't hear me on 10 meters wait a bit until I move the antenna toward
your direction.
If you come to New Jersey and would like to see the DVRA Shack in West Trenton, NJ at exit
2, on 95 N and the junction of 295 S "95n becomes 295 S when you go from PA to NJ. I am
there Friday night, Sat. and Sun.
The Mercer County-Trenton Airport is on the same site.
Frontier Airline is flying from the airport.
The DVRA Shack phone is 609-882-2240 if your in the area.
My email is n2kpc@arrl.net mailto:n2kpc@arrl.net.
40 mins. from Philadeliphia, PA
Thank You and see you on the TENTRC Nets.
73,
Lloyd N2KPC

Just received my 50 Check In certificate and gift from Ten-Tec and am very impressed. I want to thank Ten-Tec and also all the net members for a great experience owning and operating Ten-Tec equipment.

Also as a FYI, I picked up the usb program cable at the Open House and it installed just fine on my new pc running Win 8. Updating my Orion to the latest firmware using Win 8 also worked ok. The documentation only mentioned up to Win 7 but had no trouble working "in the cloud" either, HI1

Yes, mistakes happen. So far, so good for me but I keep a running tally here at home and check John's input every week. Usually whenever I find an error in something like this, I'm the one that made it. Same thing with my bank statements.

Bill AE7KAB

---In ten_tec_radio_net@yahoogroups.com, <ten_tec_radio_net@yahoogroups.com> wrote:

I want to encourage each member of the ten_tec_radio_net Group to check the Certificate Data Base each week after I post the updates. It is found in the FILES section.

We are human, both myself and the relay stations and there is always the chance of making an "honest mistake" when either listening to or writing down the persons correct callsign.

I do receive emails with people finding mistakes on their number of checkins. It is never over! I usually find their callsign credit was given to someone with a similar callsign who has never checked into our nets.

Have you ever seen a pencil without an eraser?
Have you ever seen a computer keyboard without a delete key?
What would we do without a Backspace key on our computer keyboard?
I also have been known to use "White Out" when it was needed!

It is easy to put a 2 call where it should be a 3 call and visa versa. It is also easy to leave out the A or a B in a call sign. When we have 80, 90 and 100 checkins with some being relayed to the Net Control, this is usually a fast paced situation with many having already given the last 2 letters or last number and letter of their callsign and they are patiently waiting to check in with their full callsign.

We are still a work in progress and I welcome anyone calling my attention to any errors. I have always been promp to make the corrections and give everyone the benefit of the doubt. We Are Family!

I almost forgot the Esc key on the computer keyboard and I will take this opportunity to escape from this posting. Thanks again for the great support. We Are Family!

Ten Tec SSB Net - LIVE Audio Feed from Nashville, TN.
Direct link to Audio feed: http://www.qrz.com/db/KC2QMA http://www.qrz.com/db/KC2QMA

This audio feed will be available every Sunday from Nashville TN starting at (19:00 UTC 40M 7.261) & (20:00 UTC 20M 14.325).*Schedule & conditions permitting.
Go to the Link above and click on the play button in the video window and after a short advertisement the audio will begin to play. Some delay of the audio due to internet latency is normal.
(My station in Nashville is a Ten Tec Orion II - Wire dipole @75ft flat top)
During poor band conditions the receiver of the Ten Tec Orion II will be adjusted for best intelligible signal and may have reduced bandwidth and employ some DSP noise reduction.
Hope you enjoy and thanks for supporting the Ten Tec SSB NET!

Hi Robert

Thank you for starting up and agreeing to run a Europe TT net, I have in the last few weeks managed to call into the USA net on 20m on 3 occasions, but now the days have become shorter the path across the Atlantic is not so good, as it is during the early evening and have not made a contact to Jon, Lloyd, etc for 3 weeks!

I listened on 3.650 last Wednesday at 19.00 hrs UTC but unfortunately I did not hear anyone, sorry.

I usually use 3.699 for local 80 net every Wednesday and myself M0 RSJ and Trevor G4 BHD are always there having a chat, if the net is not good and you want to check propagation give us a call on Wednesday perhaps?

I will listen on the TT net and call in if I can hear you though first on 3.650.

My radio is TT Orion 2, a TT headset and a Linear Amp uk 811 amplifier to a 80m loop at about 5m.

Hope to speak to you on Wednesday.

Du mercredi 16 Octobre 2013,

L'Europe TEN-TEC est de l'air net sera établi ici en termes

Nous invitons tous les amateurs européen avec équipement de Tentec, si vous avez ancienne TenTec des équipements comme:

Tentec Paragon, un Tentec Cosair un Tentec Omni VI, un Tentec OmniVII
ou si vous avez du matériel plus récent tel Tentec Aigle Tentec Omni Vi Tentec OmniVII ou Tentec Orion des avions de prochaine génération

Nous vous invitons à participer à cette nouvelle commande Tentec net qui est mis en œuvre à partir du 16 Octobre, 2013
Le contrôle Tentec Net aura lieu le mercredi soir me
Le TRIM est 21 h 00 locale (heure de Bruxelles) ou 19 h 00 TU
La bande de fréquence utilisée sera de 80 m initialement
Le qrg sera 3650 kHz après qrm et la propagation

Le Tentec de contrôle européen Net trouver la famille d'amateurs utilisant des équipements Tentec

Je considère que c'est un grand plaisir d'être en mesure d'exécuter et mettre en œuvre ce contrôle Net européen TEN-TEC SSB
Je suis impatient d'entendre beaucoup d'entre vous chaque mercredi soir à partir de 21 h 00 locales

Je vous remercie.

hello
thank you for your email, I was good this Wednesday, Oct. 16 for the first European net control, but I was low frequency in 3645 because there was an Italian QSO on qrg of 3650 that came strong 59 30.

For the European Net Tentec control from winter time from 1 nevembre it will always
  21 h 00 local time brussel but YOU will be 20 hours.

From my side I have a Tentec Orion II works flawlessly, I plan to acquire a line Tentec Omni VII older generation.

When will a new Tentec Orion II???

Infos via my website http://www.on4ldl.be

Salut Robert

Merci pour le démarrage et en acceptant d'exécuter un TT net Europe, j'ai au cours des dernières semaines a réussi à appeler dans le filet USA sur 20m à 3 reprises, mais maintenant, les jours sont devenus plus le chemin à travers l'Atlantique n'est pas si bon , car il est en début de soirée et n'ont pas fait un contact à Jon, Lloyd, etc pendant 3 semaines!

J'ai écouté sur 3.650 mercredi dernier à 19h00 UTC, mais malheureusement, je n'ai entendu personne, désolé.

J'utilise habituellement 3.699 pour 80 réseau local tous les mercredis et moi-même M0 RSJ et Trevor G4 BHD sont toujours là d'avoir une discussion, si le réseau n'est pas bon et que vous voulez vérifier propagation nous donner un appel mercredi peut-être?

Je vais écouter sur le net TT et appeler si je vous entends bien d'abord sur 3.650.

Ma radio est TT Orion 2, un casque TT et un ampli uk 811 amplificateur linéaire à une boucle de 80m à environ 5m.

Au plaisir de vous parler mercredi.

Hi Bob

I have joined your web group as suggested, I will try to work you on 3.650 on Wednesday at 19.00 UTC. Probably best we sick to the UTC time as the differences between European mainland time and UK time is not easy to work out for me, hi, hi!

My try at French as follows via Google the translator!

J'ai rejoint votre groupe Web comme l'a suggéré, je vais essayer de vous travailler sur 3.650 le mercredi à 19h00 UTC. Probablement le meilleur que nous malades à l'heure UTC que les différences entre temps continent européen et l'heure Royaume-Uni n'est pas facile de travailler pour moi, salut, salut!

Lloyd,

I listened, here in southcentral Kentucky, for the 10 Meter Net from 2130Z to 2200Z but did not hear you, nor any checkins. I did hear two Brazilian stations working DX on the net frequency.

73,
Dexter W4DLA

# 936. European Ten-Tec net very disapointing

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-10-24 12:45:09 UTC
From: Rick - DJ0IP / NJ0IP
Topic: 936  Message: 936

Yesterday I eagerly awaited 9pm, so that I could meet other Ten-Tec users here in Europe.

Around one minute after 9pm, I began searching for the net - assuming it would be in English.

Turned out to be a silly assumption.

On 3650 plus/minus 10 kHz there were plenty of QSOs going on, but none in English.

So at about 21:05, I honed in on exactly 3650 on a QSO in French.

Eventually the guy speaking said "Ten-Tec". Hooray (I thought).

7 minutes later, the same guy was still speaking, had never identified himself, and never asked for check-ins.

He did mention Ten-Tec several times in that period.

BTW, whoever you were, you were 20 over 9 here near Frankfurt, Germany.

Too bad your receiver was not working.

Normally a net control will spend at least 10 or 15 min. taking check-ins, THEN open the net up for discussions.

I guess that's not the way French-language nets work.

Frustrated, I switched my radio off at 21:15 and returned to the living room to watch TV with my XYL.

Was a total waste of my time.

So much for a "European" Ten-Tec net.

There is no such thing as Europe anyone. It's just smoke and mirrors! (hi)

Maybe someday we really will have a European Ten-Tec net.

Hopefully it will be in English, so that more of us can participate.

73

I just saw your post on the net european Tentec control ssb
it should be noted that this is only the second QSO net european TENtec control and criticize you already let things develop slowly it is not easy to put a few things up

I was well on 3650 Khz I start calling several times call nobody answered my calls to 21 h 25 a French station replied

yes there has french stations who answered my call and started to qso
By cons I do not hear from you, but on the stroke of 22 am 00 I heard M0RSJ who was present with equipment Tentec.

---In ten_tec_radio_net@yahoogroups.com, <ten_tec_radio_net@yahoogroups.com> wrote:

Hier, j'ai attendu avec impatience 21 heures, afin que je puisse rencontrer d'autres utilisateurs Ten-Tec ici en Europe.

Environ une minute après 21 heures, j'ai commencé à chercher sur le net - en supposant qu'il serait en anglais.
S'est avéré être une hypothèse ridicule.

En 3650 plus / moins 10 kHz, il y avait beaucoup de QSO en cours, mais aucun en anglais.
Donc ca 21:05, j'ai perfectionné dans exactement sur 3650 sur un QSO en français.
Finalement, la parole de l'homme a déclaré: «Dix-Tec". Hourra (je pensais).
7 minutes plus tard, le même gars parlait encore, ne s'était jamais identifié, et jamais demandé de check-ins.
Il ne mentionne Ten-Tec plusieurs fois pendant cette période.
BTW, qui que vous étiez, vous étiez 20 sur 9 ici, près de Francfort, en Allemagne.
Dommage que votre récepteur ne fonctionnait pas.

Normalement, un contrôle net passera au moins 10 ou 15 min. prenant check-ins, ouvrez alors la place nette pour les discussions.
Je suppose que ce n'est pas la façon dont les filets de langue française travaillent.

Frustré, j'ai changé ma radio off à 21:15 et est retourné dans le salon pour regarder la télévision avec mon XYL.
Était une perte totale de temps.

Voilà pour un "européen" Ten-Tec net.

Il n'y a pas une telle chose comme l'Europe qui que ce soit. C'est qu'un écran de fumée! (Salut)

Peut-être qu'un jour nous aurons vraiment un filet Ten-Tec européenne.
J'espère que ce sera en anglais, de sorte que plus d'entre nous peut participer.

# 939. 10-80 meter Antenna fot the Nets. Short,indoor outdoor slinky's

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-10-25 02:51:13 UTC
From: <n2kpc@...>
Topic: 939  Message: 939

I noticed the several check ins to the TENTEC Nets have used indoor antennas.
Some have asked what they could use to check in to the 40 Meter TENTEC NET
because they are using a 10-20 meter antenna inside.
I have used two Slinky's for a dipole and if you wish try four for 160.
It is easy to make you own Balun by taking RG8X and looping 6 1/2 turns with a inside
diameter loop of 4 1/2 inches and using two alligator clips to attach to the slinky's .
Center to one ground to the other, presto you have a cheap indoor/outdoor dipole to work
the TENTEC Nets.
I have no connections to Walmart or Toys R US what so ever, HiHi.
I will be on the Maine Potatoe Net Friday Night at 2300 UTC 7:00PM Eastern
on 3958 LSB. and will be at DVRA Club Shack in Trenton, NJ using Slinky's this weekend,
Worked KC2QMA John in TN from NJ on the antenna on 3958 on the Net.
If you take the five color electrical tape you can mark the exact frequency's on the
antenna for the five or more bands you want. Maybe 10,12,15,17,20,30,40,75, and 80.
You can make it vertical too.
Good inside PVC for a flag pole too in restricted sites.
So the SFI is final up to 161.
You stretch the Slinky or keep it short depending on the number of coils per foot.
Or just use you tuner.
Great for a emergency antenna in your car with a painters pole.
I hope that this will help you get on the TENTEC NETS if you could not work the Nets
because of your antenna or lack of space for one.

This past weekend was a banner day for the TEN-TEC nets.

107 people checked into 40 meter SSB net on 7.261 (John K3UR, Net Control)

82 people checked into 20 meter SSB net on 14.326 (John K3UR, Net Control)

19 people checked into 10 meter SSB net on 28.435 (Lloyd N2KPC, Net Control)

6 people checked into 40 meter CW net on 7.063 (Ron WB1HGA, Net Control)

People checking into nets for the first time:

18 new people on 7.261

9 new people on 14.326

6 new people on 28.435

Ron, WB1HGA will post any other information about his TEN-TEC 40 meter CW net.

Bob, ON4LDL will post any other information about his TEN-TEC European 80 meter SSB net.
---
Congratulations to the new 10 Checkin Certificate Winner:

W9PT Ron, IN

Congratulations to the new 25 Checkin Certificate Winners:

WA9JML Steve IL
N5QI John TX

Congratulations to the new 50 Checkin Certificate Winners:

KB3ML Paul PA
AC5RK Michael MS
W3LI Andy PA

The new Certificate Data Base will be in the FILES section. Thanks to everyone for your support.

# 942. RE: Re: [ten_tec_radio_net] 10-80 meter Antenna fot the Nets. Short,indoor outdoor slinky's

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-10-25 04:37:16 UTC
From: <n2kpc@...>
Topic: 939  Message: 942

You can change the frequency by bunching up the coils ant tape them together on each side of the slinky's.
The number of coils is adjustable per foot depending if you want a long or short antenna for the same frequency. You can tape for exact frequency like 28435 or 14325 and not have to use a tuner.
73,
Lloyd N2KPC

I noticed the several check ins to the TENTEC Nets have used indoor antennas.
Some have asked what they could use to check in to the 40 Meter TENTEC NET
because they are using a 10-20 meter antenna inside.
I have used two Slinky's for a dipole and if you wish try four for 160.
It is easy to make you own Balun by taking RG8X and looping 6 1/2 turns with a inside diameter loop of 4 1/2 inches and using two alligator clips to attach to the slinky's .
Center to one ground to the other, presto you have a cheap indoor/outdoor dipole to work the TENTEC Nets.
I have no connections to Walmart or Toys R US what so ever, HiHi.
I will be on the Maine Potatoe Net Friday Night at 2300 UTC 7:00PM Eastern
on 3958 LSB. and will be at DVRA Club Shack in Trenton, NJ using Slinky's this weekend,
Worked KC2QMA John in TN from NJ on the antenna on 3958 on the Net.
If you take the five color electrical tape you can mark the exact frequency's on the antenna for the five or more bands you want. Maybe 10,12,15,17,20,30,40,75, and 80.
You can make it vertical too.
Good inside PVC for a flag pole too in restricted sites.
So the SFI is final up to 161.
You stretch the Slinky or keep it short depending on the number of coils per foot.
Or just use you tuner.
Great for a emergency antenna in your car with a painters pole.
I hope that this will help you get on the TENTEC NETS if you could not work the Nets because of your antenna or lack of space for one.

That is just one of many antennas.

My favorite indoor antenna – because I believe its performance to be the best – is the Magnetic Loop antenna.

My uncle had this problem when he had to go into assisted living.

He wanted to continue checking into his Kadiddlehoppers Net.

While home visiting the family, I built him a magnetic loop antenna and once again he was able to check into his net daily.

Here are the details: http://www.dj0ip.de/my-favorite-antennas/old-folks-antenna/

BTW, my winter project is to build myself a similar antenna. This time I bought thicker coax. I bought 6 meters of ECOFLEX-15, which is about 25% thicker than RG-213. I will use 2 loops, 1m in diameter. It is not my top priority right now, so it may be a while until it is complete. We'll see.

information

For the European Net Tentec SSB on Wednesday evening from 21 h 00 local time brussel I'll call control for 20 minutes.
Each CQ in French and English, I will leave a white to hear a station like to participate in the net control Tentec ssb

I note the call, and after 20 minutes I call back later to speak to the first Om I'll note to participate in net Tentec ssb control.

there will be stations that speak French and others who speak English it is normal
here is for information
there are a lot of Belgian oms - French - Italian etc. ..... which has the Tentec

Hi Bob

It was good to work you for the first time this week on 3.650 on Wednesday evening and thank you for putting on the European net.

If you can call in more than one language, as I can only speak English, hi, hi! Others will have a chance to join in as well, so looking forward to you calling in English as you call in French, Italian etc, I am well impressed!

Keith, thank you for your encouraging words to Bob. It is not an easy thing to start a net, especially one that has the potential to reach across the ocean and which utilizes several different languages.

With the format that Bob has, with these different languages, it is imperative that people exercise patience. Keep checking in and give Bob your support.

TEN-TEC radios are alive and well all over the world and we need to support the efforts of all of the faithful operators of these fine radios.

Hello,
It was a tough net to do with the Contest happening and the TENTEC Eagle came thru with the filtering out of a LOT OF NOISE on the band. I listened on the Yagi with the Eagle and a Dipole with the Agro V
I want to thank Andy, W3LI for help Relaying and putting up with Contest noise.
I had 12 check ins, with three Teck's 1-TN, 2-TX, 4-PA, 5-NJ.
See You next Sunday and don't forget the CW Net tonight.at 2330 UTC with Ron, WB1HGA. A Big Thank You to everybody who tried to get thru but the QRM from the Contest shot them down.
There is always next Sunday.

# 963. Monday Night Ten Tec CW Net - Results

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-10-29 01:36:31 UTC
From: <ki8du1@...>
Topic: 963  Message: 963

Well the CW Net went very well tonight. We had 9 QNI. Also had two great (friends) CW ops that are regulars on the (Daily) Sunrise Net QRG of 7.123 @ 1300z. Special thanks to them as well to those who joined in on the fun.

BTW,I've been notifying all my CW friends throughout the county Promoting interest of the Net. Been sending lots of blanket emails out..

QNS

W8VFM - NED IN MI.
N8ME - MARK IN OH
K8MAZ - MARK IN MI
N4SNB - AL IN TN
WA4GQG - KEVIN IN NC
K9DY - STEVE IN IN
W4WXA - TOM IN GA
W2DD - GEORGE - NJ
AND KI8DU / NCS - ROGER IN WV

NET TIME LASTED ABOUT AN HOUR A 20 MINS LONG.

I would like to express my sincere regrets, there was one station trying to QNI but I just could not copy his fist. I slowed way down and asked him repeatedly to try again but I just could not copy. Called for QSP but no luck there.

To whom ever that station was, don't give up,! just keep pounding away. I think that you were using a bug, if so, may I suggest perhaps using a straight key. Otherwise just keep after it.

The Ten Tec CW Net very much would like you to get you checked in as a regular.. This day and time we need all of the CW Ops we can get. So please don't give up, we need you and want to hear from you.

Ron - WB1HGA NCS Manager;

I just made up my own Net Protocol, here is what I used;

QST QST this is the Ten Tec Slow Speed CW Net / All CW Ops are encouraged to QNI. This Net meets every Monday @ 7:30 PM Eastern on 7.063 kHz.

NCS is KI8DU / Roger located in WV using a Jupiter @ 100 wts.

Then I commenced CQing for QNI's.

Just wanted to send you a note. Get Well Soon!

See Yall Sunday;

KI8DU / Roger in WV

Nine out of ten surgeons prefer to operate on politicians. Why? Because they're easy to work on.

There's no brain, no heart, no guts and no spine to worry about. Their heads and backsides are also interchangeable.

Bill AE7KB

---In ten_tec_radio_net@yahoogroups.com, <ten_tec_radio_net@yahoogroups.com> wrote:

Affordable Healthcare for all?
Just be careful you don’t fall,
Or become severely sick.
Really, folks, this is no trick,
But rather oxymoronic.

Subject: Re: [ten_tec_radio_net] AFFORADABLE HEALTHCARE?

John: I wish we had the "affordable health care" that those in congress have.
That would make me able to live again without having to wonder IF we could
afford that next medical visit.

Clayton N4EV

PS found the source of the distortion here. Hope it is fixed. Will let you listen
next Sunday on the tune up net.

73 and thanks for pointing that out.

The ten_tec_radio_net Group is a friendly place where members can post anything that directly affects members of this Group. What I am about to post may offend someone and let me be clear, that what I am about to say here has nothing to do with Republican, Democrat, Libertarian, Conservative, Liberal, Independent, Tea Party or booze party.

After working since I was 16 years old (will be 74 on Saturday) and paying for and having the insurance of my choice, the bottom has dropped out for not only me and my wife Rose (of 52 years), but also for several hundred of my personal friends and their families.

Therefore, I want to share my feelings along with thousands of others affected by the policies of the government.

" AFFORDAABLE HEALTHCARE? by John D. Occhipinti, K3UR.....written October 29, 2013.

Affordable healthcare is all that we hear,
could this be true or is it just hot air,
thousands have lost what they once had,
affordable healthcare makes so many mad,
cancelled and dropped are the words that we hear,
thousands are forced to now live in fear,
affordable healthcare really does stink,
millions of lives are starting to sink,
it's time for polititions to open their eyes,
it's time for them to stop spreading lies.

Term limits would be great. Unfortunately, it would take a constitutional amendment to accomplish it. Good luck with that.

When was the last time the house and senate put the good of the country ahead of their own self interest? Regardless of party affiliation, "THE CLUB" takes care if itself first and foremost.

# 980. CW Net Monday night

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-11-03 18:17:23 UTC
From: Gandalf The Gray
Topic: 980  Message: 980

Hello Ten Tekkies!

Looks like I made it back from the deep, dark abyss. The hospital staff commented
how I came out of it without a stroke.
That high blood pressure can leave behind some sobering experiences.

Now to the fun stuff ...

this is a reminder that every Monday night at 7063 +/- , abt 7:30 PM (same time as always)
is the CW Net. I will be present and ready to log in you good folks.

Also, I wish to thank that person who ran the net last week and posted the calls.
I am sorry I missed that (the past week was a blur) so please announce ur self again.

"See" you Monday night!

73
Ron, wb1hga

This cw net is to encourage more CW, providing a opportunity for inexperienced and
experience to gather together at a comfortable, slow speed pace. The end result equals FUN!

# 981. Ten Tec SSB Net - LIVE Audio Feed from Nashville, TN

Ten Tec SSB Net - LIVE Audio Feed from Nashville, TN.
Direct link to Audio feed: http://www.qrz.com/db/KC2QMA http://www.qrz.com/db/KC2QMA

This audio feed will be available every Sunday from Nashville TN starting at (19:00 UTC 40M 7.261) & (20:00 UTC 20M 14.325).*Schedule & conditions permitting.
Go to the Link above and click on the play button in the video window and after a short advertisement the audio will begin to play. Some delay of the audio due to internet latency is normal.
(My station in Nashville is a Ten Tec Orion II - Wire dipole @75ft flat top)
During poor band conditions the receiver of the Ten Tec Orion II will be adjusted for best intelligible signal and may have reduced bandwidth and employ some DSP noise reduction.
Hope you enjoy and thanks for supporting the Ten Tec SSB NET!

Topic: 936  Message: 982

Bob,

I suspected it was you, but you never identified (for almost 10 minutes) and you did not ask for check-ins; at least not in English.

Keith had more patience than me. He said he waited a half hour to check in. I waited only 10 minutes.

I appreciate your effort, but that is not how your run a net.

The rag chewing should begin AFTER allowing sufficient time for everyone to check in.

Since the net was announced on this group in English, I was looking for a net in English.

The first few times when I passed by your signal, I did not stop because it was not in English.

Hey, I'm cool with people speaking their own languages, but FIRST we should allow sufficient time for everyone who wants to, to check in.

That needs to be done in English please.

Let's try again next week and remember, KEEP YOUR TRANSMISSIONS SHORT for the first 15 minutes (please).

Subject: [ten_tec_radio_net] RE: European Ten-Tec net very disapointing

I just saw your post on the net european Tentec control ssb

it should be noted that this is only the second QSO net european TENtec control and criticize you already let things develop slowly it is not easy to put a few things up

I was well on 3650 Khz I start calling several times call nobody answered my calls to 21 h 25 a French station replied

yes there has french stations who answered my call and started to qso

By cons I do not hear from you, but on the stroke of 22 am 00 I heard M0RSJ who was present with equipment Tentec.

---In ten_tec_radio_net@yahoogroups.com, <ten_tec_radio_net@yahoogroups.com> wrote:

Hier, j'ai attendu avec impatience 21 heures, afin que je puisse rencontrer d'autres utilisateurs Ten-Tec ici en Europe.

Environ une minute après 21 heures, j'ai commencé à chercher sur le net - en supposant qu'il serait en anglais.

S'est avéré être une hypothèse ridicule.

En 3650 plus / moins 10 kHz, il y avait beaucoup de QSO en cours, mais aucun en anglais.

Donc ca 21:05, j'ai perfectionné dans exactement sur 3650 sur un QSO en français.

Finalement, la parole de l'homme a déclaré: «Dix-Tec". Hourra (je pensais).

7 minutes plus tard, le même gars parlait encore, ne s'était jamais identifié, et jamais demandé de check-ins.

Il ne mentionne Ten-Tec plusieurs fois pendant cette période.

BTW, qui que vous étiez, vous étiez 20 sur 9 ici, près de Francfort, en Allemagne.

Dommage que votre récepteur ne fonctionnait pas.

Normalement, un contrôle net passera au moins 10 ou 15 min. prenant check-ins, ouvrez alors la place nette pour les discussions.

Je suppose que ce n'est pas la façon dont les filets de langue française travaillent.

Frustré, j'ai changé ma radio off à 21:15 et est retourné dans le salon pour regarder la télévision avec mon XYL.

Était une perte totale de temps.

Voilà pour un "européen" Ten-Tec net.

Il n'y a pas une telle chose comme l'Europe qui que ce soit. C'est qu'un écran de fumée! (Salut)

Peut-être qu'un jour nous aurons vraiment un filet Ten-Tec européenne.

J'espère que ce sera en anglais, de sorte que plus d'entre nous peut participer.

Looks like I made the most contacts Hi Hi…I got W4DLA, W5SOF,AI0D and HI8JQE But no Lloyd Darn!

Well we will just have to try again next week. I hope to get a 10m vertical up soon to enjoy the 10m band opening this year!

73/KC2QMA

John

From: <hamradio@...>
Topic: 994  Message: 994

Well, I have some gear for sale from a friend of mine (K4RRF) who went SK. I have sold everything except the Omni VII. Have had many queries about it on other locations when trying to seel it. Everyone knows it is a good rig but they think I should give it away because the owner is SK. I'll not dishonor his memory or his widow by giving it away. One fellow (not too bright) offered me $500 for it.I told him it would rot on my shelf before I gave it away.

So anyway, pictures and details are available at this link:

http://www.kk3q.net/sale/ http://www.kk3q.net/sale/

To keep the chatter down please use my email address and not the reflector.

(I've been asked why I don't buy it myself. Lack of funds... Lack of funds)

(It's been said before but this new Yahoo setup is bad)

Hello Ten Tekkies!

I am pleased to announce the following logged on this past Monday night.

N2OTG, WA4THR, K8MAZ, N8FL, N4SNB, WW3A, KI8DU and W2DD.

Great effort and favorable conditions (we'll take it) making this a successful and fun net.

I am glad to be back in the normal realm of things from that erre experience of hospital recovery last week.I thank everyone for their well-wishes. It feels great to be back.

Also, I am experimenting setting up a 80 meter CW net. I am also looking (experimenting) the possibility of a 20 meter net too. This projectect will coincide with my first,new yagi for 20 meters.
I will let you all know when and if anything is definite at a future date

"See" u all nx Monday nite!

# 1002. ar-33 rotor

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-11-07 19:30:19 UTC
From: Gandalf The Gray
Topic: 1002  Message: 1002

Gang,

I have a stored rotor made by Cornell Dubilier and the hi gain rotor (reconditioned some years ago) in preparation for my tri-band install (finally).(I received both some years ago with the goal of installing a yagi)

Both units work well without any slip or fuss. The rotor brakes are also tight when stopped.
It came already wired and stored together with a short "leash". (smile)
I am planning to run 75 feet of 3 or 4 conductor wire.
I may prefer to use the rotatable dial channel master instead (it's also remote control).
I need to know what the pin-outs are in AR-33 rear (or bottom) that connects the wiring to the rotor.

To my surprise found out that this AR 33 controller is tube!
Holly vacumn, Batman!

I am afraid either controller uses different voltages.

Can someone help me on this?

72/73

Ron, wb1hga

Date: 2013-11-08 20:55:02 UTC
From: Gandalf The Gray
Topic: 1004  Message: 1004

I hope I can get a answer on this post.

I am installing my first 3-element beam in my 35 year ham years.
I am hoping to get on TT CW net Monday night using this.

Several issues has held up the project. I wonder if the good folks here on TT reflector could help me.

It begins:
"start at the reflector end (boom that has a hole drilled in it) .....

whoa! stop the trolley!

What holes?? Both (2 sections) of booms have no holes they described. Do they assume us to "make" the holes?

Second issue:

The Reflector/Director bracket is TOO LARGE for the reflector element to insert. There is so much play
there is NO WAY the element could be secure.

Neither of the above makes any sense, thus I'm stuck in this groove.

I solved the second problem. The plastic tubing is inserted then the elements into that. My error is using the bracket for reflector instead for driver. (The bracket belongs in middle of boom, not @ the end).

Still stumped on the first problem ...

HI Ron.

Take a good long look at the instructions, if you don't have a good set, look on the internet there are some good copies there.

OK from the instruction sheet I have there should be a small hole in the boom about midway along the length, the hole is for a mounting tab for the beta match, look at figure 4. The beta match connects to the driver and goes back along the boom towards the reflector.

Also from figure 4 it would look like the boom for the reflector is also the shorter piece.

As per the instructions these holes must be on the top of the boom to mount the beta match.

IF you need more help let me know, best to contact me off list, as there is a delay in my getting posts from the group.

You'll like the th3jr, I had one many years ago and it worked very well.

Ten Tec SSB Net - LIVE Audio Feed from Nashville, TN.
Direct link to Audio feed: http://www.qrz.com/db/KC2QMA http://www.qrz.com/db/KC2QMA

This audio feed will be available every Sunday from Nashville TN starting at (19:00 UTC 40M 7.261) & (20:00 UTC 20M 14.325).*Schedule & conditions permitting.
Go to the Link above and click on the play button in the video window and after a short advertisement the audio will begin to play. Some delay of the audio due to internet latency is normal.
(My station in Nashville is a Ten Tec Orion II - Wire dipole @75ft flat top)
During poor band conditions the receiver of the Ten Tec Orion II will be adjusted for best intelligible signal and may have reduced bandwidth and employ some DSP noise reduction.
Hope you enjoy and thanks for supporting the Ten Tec SSB NET!

We had 15 check'ins 10-NJ,4-PA and OZ. KY4OZ from KY made it thru the strange band condition's today on the ten meter band. A big Thank You to W3LI, Andy in Pa for calling and listening for check'ins too.
We had three Teck's check in to the TEN-TEC 10 Meter SSB Net as well.
Well it 10:00PM here and time to head home to Mount Holly.
See you on the CW Net tomorrow.-.-.-
Thank's to those who tried to check in.

South central Kentucky remains the black hole of the TenTec 10 meter net. I monitored 28.435 from 2230 UTC to 2257 UTC. At 2234 I heard PP5LEO calling CQ DX. He also called a few times around 2245. At 2248 I heard "Zero Delta" apparently giving his last two for the 10 meter net check-in, but I did not hear him again. At 2255 W7GQE called CQ on 28.436 with a 59+ signal. That is all I heard on the 10 meter net frequency this afternoon.

Boy, it was sure rough cpy on 40. I did hear my friend (K1FPV) for first time as he ck in. Strange band conditions hr.
20 was difficult to cpy John. Never did ck in today. Wasn't sure when he was taking calls.

# 1015. Ten Tec CW net

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-11-12 15:36:51 UTC
From: Gandalf The Gray
Topic: 998  Message: 1015

Hello all,

The band was kinda "light" last night (at least in MA).
I could not copy several stations whose signals was barely above the noise level.
I asked a relay station to cpy but even he had no luck.
Sri, whoever you are, please try again nx wk.

Also, I am working on running another TT CW net for 20 meters in addition to the 40.
I haven't decided when.
MY new (first) 3 element yagi project is on hold. I have some issues with the ass'y instructions
(again) and awaiting word from the manufacturer. If this delay goes on, I may have to cancel
altogether and wait for spring. (wx nw is snowing, and winter-like conditions not favorable on
anyone's fingers, handling the antenna "up there").

Stations that ck-in tonight are:
W8FVM, N2KPC, N8ME,W4OCO, WA8MAZ.
Thank you!

"see" u nx Monday night;

Ron, wb1hga

Ron,

Condx last nite were lousy, and being almost (still got 10%) deaf, probably didn’t hear you well enough to send a correction So, for the record, my call is K8maz. I will work on my fist for next week. 73

Hello Mark,

yes the band conditions lead to some confusion.
There was you and someone else I cud not cpy.

I want to give everyone a chance to log in thus my appeal to any stations who can relay (QNB).

looking for you nx week.

TEN-TEC 40 meter SSB net had 83 people check in. John K3UR, Net Control.

TEN-TEC 20 meter SSB net had 78 people check in. John K3UR, Net Control.

TEN-TEC 10 meter SSB net had 15 people check in. Lloyd N2KPC, Net Control.

TEN-TEC 40 meter CW net had 5 people check in. Ron WB1HGA, Net Control.

Congratulations to the 4 new 25 Checkin Certificate Winners:

K4TAX Bob TN
KD4AR Sonny GA
WE0D Greg FL
KC9UAA Ron IL

Congratulations to the new 50 Checkin Certificate Winner:

W4DLA Dexter KY

We had 11 new people check into the 40 meter and 20 meter SSB nets on Sunday.

A total of 1239 different people have checked into our nets since Janurary 20, 2013, when the TEN-TEC Certificate Program started.

The new Certificate Data Base will be in the FILES section. All errors were corrected and everyone has received all their credits for checking into the 40, 20 and 10 meter SSB nets. Thanks to everyone for their support of the TEN-TEC nets and the ten_tec_radio_net Group.
---

For those members of our nets that are current or ex-military, I have just put one of my original songs, "The USS Douglas H Fox" on SoundCloud. There are also some of my original songs there that fit in perfectly for Veterans Days, which we just celebrated on Monday. Some of the titles are: "Proud To Be An American", "Welcome Home" and "God Bless Our Troops".

For those interested in Classic Cars (Originals, Customs and Street Rods), I just put another of my original songs there, "The Pocono Mountain Street Rods". I am playing the organ and singing in 3 part harmony on all of these songs and they were all recorded at my

home studio. Here is the link to listen to these songs

Hi Dexter, thank you for taking the time to express your gratitude to TEN-TEC Inc and the TEN-TEC nets. We appreciate you and also everybody else that supports our nets.

Without you and the rest of our elite members, the TEN-TEC nets not be possible. United We Stand!

I want to take this opportunity to welcome the new members of the ten_tec_radio_net Group. We now have 175 outstanding people who are part of this elite Group.

I am looking forward to checking many of you into our 40 meter SSB net on 7.261 at 2PM and the 20 meter SSB net on 14.325 at 4PM tomorrow.

Please try to support Lloyd N2KPC as he runs the TEN-TEC 10 meter SSB net at 5:30PM on 28.435.

Thanks again for your support.

Date: 2013-11-17 18:25:59 UTC
From: <kc2qma@...>
Topic: 748  Message: 1023

Ten Tec SSB Net - LIVE Audio Feed from Nashville, TN.
Direct link to Audio feed: http://www.qrz.com/db/KC2QMA http://www.qrz.com/db/KC2QMA

This audio feed will be available every Sunday from Nashville TN starting at (19:00 UTC 40M 7.261) & (20:00 UTC 20M 14.325).*Schedule & conditions permitting.
Go to the Link above and click on the play button in the video window and after a short advertisement the audio will begin to play. Some delay of the audio due to internet latency is normal.
(My station in Nashville is a Ten Tec Orion II - Wire dipole @75ft flat top)
During poor band conditions the receiver of the Ten Tec Orion II will be adjusted for best intelligible signal and may have reduced bandwidth and employ some DSP noise reduction.
Hope you enjoy and thanks for supporting the Ten Tec SSB NET!
73/John KC2QMA

# 1024. 20Meter SSB net checkin quality request

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-11-17 22:03:21 UTC
From: <jhenry@...>
Topic: 1024  Message: 1024

This is John Henry. I checked in using the TEN-TEC call sign KK4TT Sunday the 17th around 4:50pm Eastern Standard Time. (14.328)
I was running remote, and I would appreciate anyone sending me inputs on how the audio sounded. Evidently Lloyd could understand me, but, curious about if anyone heard anything really negative in the audio. I'm not really interested in the normal ham quality RST type of a report, but on how continuous or packet error free the audio sounded. pops? ticks? stutters?
I am remote at a location that has a pretty bad internet connection, so, curious if I am handling a poor internet connection with this alpha test version of OnePlug or not.

Thanks for any and all candid remarks, good or bad.

Thanks, and 73,
John Henry, KI4JPL

John, thank you for checking into our TEN-TEC 40 meter SSB net today. Thank you for taking the time to answer several of the questions that were presented.

As far as I could hear and with the record and playback that I did, your first words when keying the mic had a little distortion, like a crackling sound, then it would clear up as you continued to speak. Thanks again for all you do.

John K3UR, Net Control

John,
Your RST was 5X8 here in NJ and audio was good for the link you used had
No breakup or pops, ticks, etc.
The Club members listening here liked it too and they were at their home stations scattered around NJ and PA. At the two last Club meetings the Club has started a fund to buy a TENTEC Radio to use in case of a
future storm like Sandy when we can not get to the Club Station for ARES and RACES net and use.
Perfect time on your end and we thank you coming on with the links so we could hear for ours selves.
Nice to hear KK4TT on the air.
73,
Lloyd N2KPC and W2ZQ Cub Station West Trenton New Jersey USA like TENTEC

Subject: [ten_tec_radio_net] 20Meter SSB net checkin quality request

This is John Henry. I checked in using the TEN-TEC call sign KK4TT Sunday the 17th around 4:50pm Eastern Standard Time. (14.328)
I was running remote, and I would appreciate anyone sending me inputs on how the audio sounded. Evidently Lloyd could understand me, but, curious about if anyone heard anything really negative in the audio. I'm not really interested in the normal ham quality RST type of a report, but on how continuous or packet error free the audio sounded. pops? ticks? stutters?

I am remote at a location that has a pretty bad internet connection, so, curious if I am handling a poor internet connection with this alpha test version of OnePlug or not.

Thanks for any and all candid remarks, good or bad.

Thanks, and 73,

John Henry, KI4JPL

John and others,

I want to thank everyone for their inputs.
John K3UR, I myself heard what you described when you played the audio back. I have corrected that problem now. It was due to some changes I had made to help transmit packet loading, and unfortunately, didn't set the starting pointers correctly. So, it would end up sounding like what one sounds like with a physical mic that has a bounce on first contact. That was corrected when I went to 20m.

I was extremely interested in 20m because I was at a friends house that has a 500m DSL line that was very good at jitter but was only about 380m at the time of the net using voip test tools. This is the hardest part of getting One Plug to work more for others, having it reliable on the low bandwidth networks.
I did the wrong thing with OnePLug, I did not publish minimum operating environment specs for valid Ethernet control/audio streaming. Flex and others were a bit smarter and have published the minimum requirements for theirs. I'll need to do that. Looks like I'll have to state with the next version of OnePlug the minimum will be 500mb with good jitter.

One very interesting comment I do want to make.

On the 40m net, I was not 100% honest at all times.
Part of my communications on 40m was via OnePlug.
Part of my communications on 40m was using Skype as my audio path.
No one knew the difference.
AND,
at one point, I made a quick little 5 minute drive from the Krystals parking lot to the plant, and did a bit via the mic,

No one knew the difference.

Anyway, Working on OnePlug as we speak. Been a bit hectic the last few weeks with so many things.

FYI, I don't want anyone to ever feel they can't pipe up and say something good or negative about any thing related to the products. ALL inputs will help make it a better product.

Thanks, and 73,
John Henry, KI4JPL
TEN-TEC Engineering

---In ten_tec_radio_net@yahoogroups.com, <k3ur@...> wrote:

☐ I have determined that most of the comments to John Henry KI4JPL, were made with his checkin and transmissions on 20 meters. I did not hear him on 20 meters because of the poor progagtion between Atlanta, GA and Sevierville, TN on 20 meters and also for the fact that I had turned the rest of the 20 meter net over to Lloyd N2KPC when John Henry came on.

My comments to John Henry were when he checked into our 40 meter net, as he had a +15 signal and his audio was very loud. I was using Bose Ear Buds and can hear every anomaly that comes into my Orion II and Omni VII.

John Henry acknowledged what I told him after I played back the recording of his transmissions on 40 meters. What I heard was a slight crackling sound on the first word everytime he keyed the mic and the rest of his transmissions sounded clean. I repeat, the unusual noise I heard was only on his first word each time he keyed his mic and the rest of his words sounded clean.

For the new members who do not know much about me, you can go to QRZ and enter K3UR.
My 2 greatest assets for sound:

I have been a musician for 64 years (musicial Instruments, vocals and song writing).
I am and have been the Official Setup Specialist for the W2IHY Audio Gear for the past 12 years and have setup the audio for upwards of one thousand Amateur Radio Operators.

In conclusion, what I heard on 40 meters and what others heard on 20 meters are 2 different occurrences and as long as John Henry received a critical report as he asked for, this is all that matters. Thanks again to everyone for your support of the ten_tec_radio_net Group.

John, thank you for checking into our TEN-TEC 40 meter SSB net today. Thank you for taking the time to answer several of the questions that were presented.

As far as I could hear and with the record and playback that I did, your first words when keying the mic had a little distortion, like a crackling sound, then it would clear up as you continued to speak. Thanks again for all you do.

# 1042. 10 Meter TENTEC SSB NET Time Change

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-11-20 02:57:35 UTC
From: <n2kpc@...>
Topic: 1042  Message: 1042

The 10 Meter TENTEC SSB NET time change will move from 5:30 PM to the new time of 1:00PM starting this coming Sunday 11-24-2013.
This will give everybody a chance to check in when propagation is good.
It will give New Hams "Tecks" and DX a chance to check in too.
I always check with John, K3UR to keep things running smoothly and thank him for his hard work and time.
I drive about 45 Min. to the DVRA Shack to do the nets and they get more icing and snow sometimes so that is a consideration as well.
I put pictures on the Yahoo TEN_TEC_RADIO_NET group.
Just click on PHOTOS then click on n2kpc then click again to see the bigger photos with the captions by moving your mouse to the bottom left to see the captions. You can change the color of the captions my putting the arrow on the caption.
See you Sunday at 1:00pm and Thank You for supporting all the TENTEC NETS and TENTEC too and mostly each other on and off the air as I see that you do.
These are good times in Radio because of each one of YOU,
My Wife Gaye, KB2YOA and Myself Lloyd, N2KPC Thank You
I am a lucky Ham who has a Wife as a Ham who supports my time spent and the TENTEC Nets and TENTEC.
I wish to thank the Delaware Valley Radio Assoc. W2ZQ members for 100 % support of the TENTEC Nets and the use of the Shack all day every Sunday to do the nets. Several of them check in to the nets as well

73,
Lloyd N2KPC

# 1043. European TT Net Last Night

Topic: 1028  Message: 1043

Well the chosen frequency is not a good one.
It is too low in the band.
There are always plenty of Russian (or similar) stations on in the low portion of the band and they are usually 5-9+20 here into central Europe.

Bob, you were about an S7 but copy was impossible due to the strong Russian station on the same frequency.
Sorry I did not stay longer, but I did not want to QRM the Russian QSO.
They were already on that frequency before we started.

I suggest to pick another frequency and do not pick a "round number".
Do not use 3650 or 3700 or 3750, etc.
Instead, pick something like 3719 or 3679, etc.
There is a better chance these will be uncluttered than the round frequencies.

Out of curiosity Bob, how strong was my signal at your QTH?
I was running an Eagle and about 600w into a dipole.

I wondered where the net had gone, thanks for the post Rick, I am sorry and it is my fault that I didn't go down as far as 3.650mhz, as Rick said the band was very very noisy and when I joined the local UK net on 3.699mhz it was awful on there as until about 21.00hrs UTC.

I don't know if Bob or anyone else for that matter could post the frequency change, if we are not going to be on or close to the designated one perhaps?

Just my 5p worth, hope to work some of you again soon.

# 1045. Stuborn Omni VI+

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-11-21 23:55:11 UTC
From: Clayton Brantley
Topic: 1045  Message: 1045

I am stuck trying to solve a problem with my Omni VI+.  I have been getting weird happenings on LSB
lately and in looking for the problem I found that the BFO is not working properly.  Here is what I have
found so far.

I hooked my counter (HP 5348A) to the BFO output per the discussion in the manual.  In CW TX to Tune,
C-10 has no effect on the frequency, it remains at 9.000678.  Then in LSB RX, C16 has no effect either.

I can switch to USB and C12 will adjust to 9.003000 as per directed.  The only way to get LSB to work
C10 to 9.000000 mhz.  At connector 60 all the voltages are good.

I talked with Paul and he had me to change the crystal and trimmer cap out but no help.  I do have a spare
board that seems to work the same way.  Wonder IF I'm looking up the wrong tree?

My hair is gone and stumped.

Looking for an expert ... Not by my definition, which is EX is a has been and a SPURT is a drip under
pressure.

Thanks and 73 Clayton N4EV

# 1046. Net Times UTC=EST=24hr-EST

Yahoo group: ten_tec_radio_net (2007 — 2014)

From: <n2kpc@...>
Topic: 1046  Message: 1046

The TENTEC 10 Meter SSB Net
It was at 22:30 UTC. at 5:30PM.
The New Time will be at 18:00 UTC = 1:00PM Eastern Standard Time =
13:00 24 Hour EST. for the 10 Meter SSB Net

Google worldtimebuddy for the time converter.

K3UR, John 40 Meter Net starts at 20:00 UTC = 3:00PM = 15:00 24 HR EST.
20 Meter Net starts at 21:00 UTC = 4:00PM = 16:00 24 HR EST.
40 Meter Warm Up Net 19:00 UTC = 2:00PM = 14:00 24 HR EST.
WB1GHA, Ron 40 Meter CW Net 00:30 UTC = 7:30PM = 19:30 24 HR EST====
==========The Next DAY UTC I would just leave it
at 7:30PM EST because DX can not use the 40 Meter Band anyway.

The European at 2:00 PM on Wed. in the extra portion, during the work week
here in the US is a hard one to check into time wise.
Needs to be in the General Band for more check ins from the good old USA.
But I don't know what Bob is dealing with over in EU with their band and conditions
and I wish him many check ins.
Don't forget the worldtimebuddy it's a fast converter.
C U ON the TENTEC Nets ,-,-,-

Ten Tec SSB Net - LIVE Audio Feed from Nashville, TN.
Direct link to Audio feed: http://www.qrz.com/db/KC2QMA http://www.qrz.com/db/KC2QMA

This audio feed will be available every Sunday from Nashville TN starting at (19:00 UTC 40M 7.261) & (20:00 UTC 20M 14.325).*Schedule & conditions permitting.
Go to the Link above and click on the play button in the video window and after a short advertisement the audio will begin to play. Some delay of the audio due to internet latency is normal.
(My station in Nashville is a Ten Tec Orion II - Wire dipole @75ft flat top)
During poor band conditions the receiver of the Ten Tec Orion II will be adjusted for best intelligible signal and may have reduced bandwidth and employ some DSP noise reduction.
Hope you enjoy and thanks for supporting the Ten Tec SSB NET!
73/John KC2QMA

# 1054. RE: Net Times UTC=EST=24hr-EST

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-11-24 18:22:33 UTC
From: <kc2qma@...>
Topic: 1046  Message: 1054

What freq is the 10m net on right now? I hear another net?

---In ten_tec_radio_net@yahoogroups.com, <n2kpc@...> wrote:

The TENTEC 10 Meter SSB Net
It was at 22:30 UTC. at 5:30PM.
The New Time will be at 18:00 UTC = 1:00PM Eastern Standard Time =
13:00 24 Hour EST. for the 10 Meter SSB Net

Google worldtimebuddy for the time converter.

K3UR, John 40 Meter Net starts at 20:00 UTC = 3:00PM = 15:00 24 HR EST.
20 Meter Net starts at 21:00 UTC = 4:00PM = 16:00 24 HR EST.
40 Meter Warm Up Net 19:00 UTC = 2:00PM = 14:00 24 HR EST.
WB1GHA, Ron 40 Meter CW Net 00:30 UTC = 7:30PM = 19:30 24 HR EST====
==========The Next DAY UTC I would just leave it
at 7:30PM EST because DX can not use the 40 Meter Band anyway.

The European at 2:00 PM on Wed. in the extra portion, during the work week
here in the US is a hard one to check into time wise.
Needs to be in the General Band for more check ins from the good old USA.
But I don't know what Bob is dealing with over in EU with their band and conditions
and I wish him many check ins.
Don't forget the worldtimebuddy it's a fast converter.
C U ON the TENTEC Nets ,-,-,-

The new frequency for the 10 Meter TEN-TEC SSB Net will be on 28.440 USB.
Now that we have a good time of the day with propagation at 1:00 PM Sunday
Another net was using the time slot and they were very nice to announce the move.
during their net.
It went very well and I Thank all who helped with the relays when needed.
45 people checked in with 8 Tecks and a first HF contact as well.
That is 8 new Hams who very happy to have a place to check in to and
become part of the TENTEC Family and learn what it is all about.
The DX station had fun too.
11-NJ, 4-PA 2FL, 1-IA, 1-NM, 5-TX, 1-CO, 2-AZ, 1-WY, 1-TN, 1-CN,
2-PR, 1-URUGUAY, 2-ARGENTINA, 9-BRAZIL = 45.
May the Propagation be with you. on the 10 Meter Band next week.
A big Thank You for Dexter W4DLA for his help when the lights went out here in NJ
due to the wind storm. I just finished typing up the Net List for John K3UR and this note
of thanks to you all. Have a Blessed Thanksgiving everybody.
Thank You John KC2QMA for live steaming the TENTEC NETS several Hams
mentioned it including some of the DX Stations and that Great. Good Job, John.
The Power is back on and I glad I on Vacation this week because it's 12:22 AM
Monday morning, Good Night, 73, Lloyd, N2KPC ZZZZzzzz

hello Ten Tec owners,

a brief reminder the CW net is tonight at 7:30 eastern time on 7063.
Let's hope for better band conditions.

I am currently trying out the possibility of moving the net to 80 meters just for the winter months.
The tri-bander is still on hold, awaiting for 2 10 meter traps from MFJ (Hygain antenna). I am afraid we might not get to raise it in time B4 the real winter gets here.

see you tonight!

What is it with the East? Gimme gimme gimme. Isn't it enough that the "voice people" west of Ole Miss are denied their chance of doubling down on check ins with the current run time of the 40 meter ssb net. No joy for us out west, thanks relays whoever you are??? Warning short segway coming))) So listen to this example, last Sunday I tried many times to get relayed in to that net and the ten meter net for that matter. Nothing! Not a sniff even though I could hear many stations fine. Perhaps a problem with the radio? Well a quick check of the ALC lamp with my puckered lips and a quick whistle... and I mean quick, a tenth of a second like, and some bozo immediately responds QUIT WHISTLING! All I could think was Whiskey Tango Foxtrot? I digress.
But heck ya if you think you can persuade the powers that be into giving you a certificate for that accomplishing feat of radio work then fill your boots. If that don't work, open your window and shout 3 dits 4 dits 2 dits, dah, do dah, do dah. I'm sure net control will hear y'all. Perhaps we need an additional net controI? Anyone out there known as the "Ears of Atlanta" sure could use that guy. If your still buggered, I'll send you my cert. Never missed a Sunday yet! All 3 ssb nets to date and got my 23 points to show for it.

Just sayin...

2-PR, 1-URUGUAY, 2-ARGENTINA, 9-BRAZIL = 45.
May the Propagation be with you. on the 10 Meter Band next week

JUST A NOTE I wish to add.
I moved the 10 Meter Net because of time and propagation.
So we went from 6 to 45 check ins as above. I asked the most WESTERN stations that checked in to call
AK, BC, WA,OR and they kindly did, and the North West CN areas. No propagation even with the help of the Hams that tried.
I and several of the check ins spent 2 hours trying NON-STOP to reach WEST and NORTH and EAST and SOUTH, but no PROPAGATION, get it?
There is no eye or you in TEAM WORK. So We will try again next week like every week like We have done all along.
And it is a Honor to work with the TENTEC Family because they volunteer their time, money, hard work and loyalty to the nets and each other too.
So lighten up a little because everybody I hear relays anybody they can hear, no exceptions.
So on that note, May the propagation be with you.
When I call to the Northwest I ask for BC first because I was looking for VA7ZR my most NW CN contact to have checked in.
73, Lloyd N2KPC

Ron,

I guess there was no propagating this way (West MI). Sri I missed this one but was with you in spirit. Maybe next week.

Hi Ron,

two for one for you tonight, W2ZQ Club Station, West Trenton, NJ and N2KPC

the Force 12 2 Element 40 Meter Yagi. QRM from adjacent station was rough.

but the Eagle handled it with flying colors. The propagation drop out twice between

NJ an MA even on a 2 Element Yagi no less.

Thank's for being there.

73,

Lloyd N2KPC and W2ZQ Club

QSL's on their way.-.-.-

Rick, after all of the good things you have to say about the TEN-TEC EAGLE, have you kissed your radio lately?

TEN-TEC Inc had you in mind and used the KISS principle when they designed the Eagle. This stands for, Keep It Simply Simple.

Thank you for the positive testimony brother.

Rick, you may not know this, when I was at the TEN-TEC Hamfest this past September, I met with Jack Burchfield in his office and we discussed a whole lot of things about TEN-TEC and Amateur Radio.

Is it any secret that I told you that Jack Burchfield designed the TEN-TEC EAGLE for you?

Rick, I believe that a whole lot of EAGLE owners owe you a great big thank you.

Well how about that Jack and Rick sneak'in around building a better TEN-TEC Radio for all of us Hams without us knowing about it. The nerve of those two. Something should be done right away before they do it again and I know just what to do about it.
THANK YOU for a GREAT RADIO
Lloyd N2KPC

John, you don't realize how true that statement is.

I have known Jack Burchfield for almost 40 years.
When he decided to return his business to Europe, I found him a dealer to be the German TT distributor.
I then helped launch the business here in DL.

A couple of years prior to the OMNI VII, Jack and I were brainstorming which technology to use.
I wanted EXACTLY what the Eagle turned out to be - single conversion, simple radio.
Jack felt upward conversion and a GC RX was the only way to go.
He also added a TV set. (scope)

As a result, he built the OM7 as it is, then sent me one to test and give feedback, prior to production.
A couple of my suggestions made it into the OM7 before production began. I was indeed impressed with its performance, even though it uses upward conversion - but it was not "my

radio".

He caught me totally by surprise with the Eagle. I didn't even know it was in the works. Then a couple weeks before its announcement, he just sent me one, said he finally built "my radio". Again he asked for my feedback. It was a pre-production engineering unit. I liked it so much, my only feedback was "you're not getting it back; send me a bill."

As it turned out, I shipped it back because he wanted to replace the motherboard with a production unit. They made a few changes including gold-plating all the plug connections, and he wanted me to get one with that. I got ALL the options with it, but he forgot to send the mic, so I don't have an original mic.

So as you see, TT actually did design the Eagle for me!

Just before leaving the states in April of 2011, I met Jack in Sevierville and had lunch with him.
I told him the Eagle was missing one very important thing - a post-dit delay (hang) adjustment for CW amp keying. This is necessary when running older non-QSK amps. As a result, he quickly designed the Model 718 Amp keyer.

Where else on the planet do you get that kind of service?

# 1079. TENTEC Dream fron 2001 comes true

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-11-26 18:22:59 UTC
From: <n2kpc@...>
Topic: 1079  Message: 1079

This is from June 20, 2001 from a request for thoughts from Hams by TENTEC
for input for a new radio. Well it happened with the new radios that followed.
This is proof the TENTEC Staff listens and takes note to what each of you say
on this group.
Just like I did not have to call TENTEC today to tell them to change the frequency on the
TENTEC Website for the 10 Meter Net. I don't know who did but I'll bet it was K3UR, John,
Stan Brock or Jim Wharton who did, Thank You.

I will be on 3958 LSB at 7:00 PM Eastern Time as a fill in Net Control for the Maine Potato
Net from the DVRA Club Station in West Trenton, NJ if you want to try 75 Meters in case Ron
moves the CW net to 80 Meters for the Winter propagation like he is thinking about.if you
want to see how the band is for you.
Hope to talk you tonight.
73,
Lloyd N2KPC

Hello Everybody,
Hope that all is well with everybody.
My Wife Gaye, KB2YOA and myself Lloyd, N2KPC, God willing will be at the
next Hamfest too.
We enjoyed the first one very much. It was worth the drive from New
Jersey to see all the fine people.
I use two Scouts in our minvans and I use the a Scout with a 1254
General receiver in my 4 wheel Bronco II when I am Surf Fishing here in
NJ.
Pencil ?????
1... Make the 516 run at 12.0 volts for mobile and solar use.

2... Be able to use the 302J encoder/keypad for mobile and handicap use, plus
marine use too.

3... Mars cap use. " I'am AAR2BP "

4... SSTV and PSK31 use... a big selling point with a lot of hams now.

5... Moblie bracket.

6... Sound card interface jack.

7... Grounding wing nut like on the 555 Scout.

8... Cover the "fins like on the Scout".

9... Both CW key jacks like the Scout with the keyer built in.

10... Give everybody a raise at Ten Tec.

11... Open a Motel for the Hamfest.

12... Ask Ray for his CW opinion.

13... Have a 516 at the Hamfest in Sept. if you can.

14... Name it the Chieftain.....or Chief.....or Orion. Orion goes with Jupiter.

Thank You For Your Time once again,
N2KPC,
Lloyd T. Price
n2kpc@arrl.net

# 1080. CW Net results

Monday night's net we had rough time with the poor propagation conditions.
But there were 3 check-ins who stay the course.

KC2QMA
K4KXO (first time check-in)
W4BKI

Congrats to the first time ck-in, Ken K4KXO.

KC2QMA John, provides audio streaming of TT ssb nets on Sundays.
Thank you John for checking in and supporting the CW net.

I have been looking into moving this net for the winter to 80 meters as 40 is becoming dismal
these days..

Some of you have expressed giving out certificates for X number of check-ins. Let me assure you that is in the works. I need to work out details and at the moment I do not have time with the holidays coming up.

Have a peaceful Thanksgiving.

"see" you next Monday night.

Steve, you have your experience with Elecraft, I have mine.

Mine is not the same as yours.

About 10 years ago I sent both Elecraft and Ten-Tec an email expressing the need in Europe for a preselector connection.

I even created a detailed procedure on how to implement this on the K2.

BTW, it may also be used for installing a noise canceller, such as an ANC-4.

Results:

- Elecraft: not even a reply to my email.

- Ten-Tec: First a question on “how bad is it”. I sent an audio file demonstrating the problem (and the cure), based on the Jupiter. Then a promise from the president that all TT transceivers in the future would have this feature.

Follow through:

- Nothing on the K2 but oddly enough the K3 has it. Probably had nothing to do with my email.

- The Omni VII has it from the get go. For the Eagle, there is a procedure on how to do this, but you have to add an RCA Phono jack to the rear panel first.

As you see, the mileage does indeed vary.

BTW, anyone interested in my MOD to the K2 will find it here:

http://www.dj0ip.de/downloads/

To the TEN-TEC Family,
If you want to stop by just let me know and I will be there.
You can work the TENTEC Eagle on some Big Beams if you would like too.
I am on vacation the 2nd, 4rd and the last week of Dec. and the 1st.of Jan..
I will be the almost every day during the time.
The Delaware Valley Radio Association and I wish you a safe trip during
the Holiday Season.

N2KPC Lloyd will be at the DVRA Shack. Shack Phone is 609-882-2240

Friday Nov. 29, 1:00PM to 9:00PM
Sat. Nov. 30, 1:00PM to 9:00PM
Sun. Dec. 1 1:00PM to 8:00PM

Call the DVRA Shack Phone or the DVRA Repeater on 146.670 Mhz. PL. 131.8
We might have to step out for food etc. for a short time.
I sometimes am there late pass midnight work sstv and voice to the
International Space Station and DX on CW, voice and the digital modes.
I teach the CW and all the digital modes like SSTV, PSK31, Wefax, and
Acars etc. Also Shortwave listening.

Thank You,
Lloyd N2KPC
n2kpc@arrl.net for advance setup time.

Rick-

While I agree with you that Elecraft should have had the courtesy to reply to you, the fact that they did not adopt what you sent to them does not make them any less of a great company. I don't see how one incident 10 years ago that didn't involve malfunction of equipment should sour a person for life on a manufacturer. Do you hold it against everyone who ignores suggestions you make? The only obligation they had was to respond - thanks for the idea. Nothing more. That Ten Tec chose to go further is wonderful,

But I don't know how not responding to your email diminishes Elecraft's service excellence. Here are 2 American manufacturers that make great equipment and provide excellent service. Your experience has absolutely nothing to do with either of those facts.

Yes, this is a Ten Tec list, but they are one of the 2 remaining volume ham equipment manufacturers. We need both.

73,

Steve, N4EUK

Steve,

You read FAR too much out of my post.
I NEVER said I don’t like Elecraft, I only pointed out a difference in a response to criticism of their products.
Elecraft ignored it entirely and Ten-Tec requested more information, then took an action.
THOSE ARE THE FACTS, and people can interpret them however they like.

One of the BIGGEST problem the rest of the world has with US manufacturers is, most are totally unaware of differences in other parts of the world and as such, usually don't even understand the magnitude of the problem(s). So they fail to respond.

It is frustrating when people complain and the complaints get ignored.
We have some unique problems here which are easy to address, but that doesn’t help when they fall on deaf ears.
The problem was NOT minor nor insignificant.
I can show you audio/video files documenting the problem and you’ll see it is very significant.

Hey, we see that right here in our various Ten-Tec groups, but from a different perspective.
(US) People here complain how the Japanese manufactures don’t respond to complaints about problems with their equipment, yet they happily point out that Ten-Tec and Elecraft are very responsive.

For the same reason, I complained about Elecraft not responding to a complaint from Europe.
7 years after that incident, I bought a new K3 directly from Elecraft.
I like Elecraft. They build great products. But my personal experience with the responsiveness of Ten-Tec has been better than my experience with Elecraft.

IMO, my experience has everything to do with the quality of their service.
How much effort does it take to click “Reply” and acknowledge the email, better yet, perhaps even say thanks.

I am the Customer Support Manager for a German antenna company selling into 130+ countries around the world.
I expect no more from other companies than what I give my own customers.

Rick-

I think we are in violent agreement that Elecraft should have responded. Beyond that, we have expressed our opinions and should take any further discussion of this issue, if any, off line.

Happy Thanksgiving to all.

Steve

# 1091. TENTEC Net Amtenna's for Limited Space

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-11-29 13:13:16 UTC
From: <n2kpc@...>
Topic: 1091  Message: 1091

I have been testing many limited space antenna types at all heights and lengths
for sometime because that's what I like t do.
I have been asked by many new Hams what to use for the TENTEC Nets and everything else
including utility stations and shortwave listening out of the ham bands.
So far the best antennas for 10-80 meters outside for 75-80 meters has been the SPI-RO D-56
Pro 6-trap 82 ft. dipole with the PB-1C balun. Then then the Cobra Jr or the Cobra Sr.
These can be used as a inverted-V, flat top or sloper, etc.
Many shortened antennas did not work well on 75 meters.
For those who have very limed space the 24.5 ft end feed EASY TENNA with the
choke balun by Maple Leaf Studio Antennas found on Ebay worked the best of all 100 types
tested. It was the best for inside the attic, out the window to the picnic table, in the
rain gutter, flagpole antenna tested.
It does not have to be grounded.
But to tune it you need the choke balun for 75-80 meters, We used a LDG Z-100 tuner on a
TEN-TEC Argosy 2 with the choke balun connected to the tuner. Picture of this setup is on
the PHOTOS on this site. This antenna for outside use the 53 ft. version work very well and
if you can get it inside that's great too.
Next the ISOTRONS work well to. You can put three of them on your balcony
railing with plastic flowers all over them. You can connect three antennas to one coax by
using two short jumpers and two Tee connectors. But they need to be on the second floor.
The EASY-Tenna must have 50ft or more of coax and a outboard tuner
and one model does 6 thru 80 meters with the lengths of 24.5,---29.---36--44--49 or
53 foot long wire. no ground, There is that vertical CHEAP antenna you always wanted.
I don't have anything to do with these companies.
I just mess the antenna all the time, love it.
The next antenna might bring back you childhood play time.
Take two Slinky's from Walmart at $3.00 bucks a box 6 1/2 turns of RG8X with
a 4 1/2 inch inside diameter or a 1.1 balun and two alligator chips, one clip to
the center conductor and one to the braid , run it to your tuner and Bingo 10-80 meter
CHEAPER dipole
I hope this help you with getting on the air or maybe that vertical antenna you always
wanted but didn't have hundreds of dollars for one.
Low Profile too.
I will be on The Maine Potato Net Fri, Sat. and Sun. on 3.958 at 7:00 pm.
I worked John, KC2QMA in TN from NJ on 3.958 on the Slinky Antenna as above.
These work when you don't have the room or restrictions are in place.
Good Field Day, RV'ing, camping back packing or just a very quick setup just using a
painters pole on the patio picnic table with your new TENTEC HF Radio you just got because
of all the money you saved on antennas.
Listen to me Tape Measure three element VHF antennas and Slinky dipoles are what the kids
are building and are bringing new hams into Amateur Radio thru our Radio Club DVRA and if
you take the time it will work for your clubs too.
Check out the Boys Scout pictures under TEN_TEC_RADIO_NET PHOTOS.
There is a Big RC Car in one of the pictures that has a camera in it for Fast Scan TV live
to the Shack via Amateur Radio and the club built a race track around the property that has

brought us new people such as parents with kids that turned them into Hams. Non-Hams to Hams Just a another way to think outside the box.
Future TENTEC Family replacements. And the get to use the TENTEC Eagle and have a demo too.

Talk to you then or on the TENTEC Nets
73,
Lloyd N2KPC

Any time I hear anyone say some antenna works □well□, my immediate answer
is, "compared to what?"

```
I too like to play with antennas.
When I want to evaluate any antenna, I always try to compare it to a full
size dipole AND some kind of vertical.
Of course for the low bands, the vertical is not full size.
By comparing all antennas to these two, I get a pretty good feeling for the
relative performance level of all of these.
```

In my opinion, the ISOTRON is a great antenna for someone with no space for
wires and needs something that doesn□t look like an antenna.
But if you compare it with 30 to 50 ft. of wire running from the second
floor of the house to a tree, the ISOTRON is a lousy antenna - especially on
the low bands.

```
All things are relative!

If you require a tiny antenna that actually works well, then a Magnetic Loop
is a much better solution than an ISOTRON, but it has to be a good Magnetic
Loop and they are very expensive.

I do not normally disagree with Lloyd, but the Isotron is a piece of crap. I smoked one with my IC753 at 100 w. The insulation on the coil melted. I visited the ARRL HQ some yrs ago and they told me the same thing.
Good luck
Andy, W3LI

# 1095. RE: HAPPY THANKSGIVING!

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-11-29 16:37:35 UTC
From: <k9arm1@...>
Topic: 1088  Message: 1095

John, hope you and everyone had a good thanksgiving. Thank you, Lloyd and all the relays for your hard work.

I received my 50 check in certificate and gift, thanks to you all and the folks at Ten-Tec!

Andy K9ARM

---In ten_tec_radio_net@yahoogroups.com, <k3ur@...> wrote:

On behalf of the ten_tec_radio_net Group, I would like to wish all of our members a very Happy Thanksgiving. "This is the day that the Lord hath made, rejoice and be exceedingly glad in it"!

In the spirit of Thanksgiving I am announcing that starting next Monday December 2nd, I am going to give checkin credits to everyone that checks into the new TEN-TEC 40 CW net, which meets each Monday at 7:30PM Eastern Time on 7.063, with Ron WB1HGA, Net Control. I encourage you to support Ron in this new venture.

I have included an ATTACHMENT with this posting of my TEN-TEC SSB Net Forum talk, which took place under the big tent at the 14th Annual TEN-TEC Homecoming Hamfest in Sevierville, TN. This is for the benefit for all of the new members of our nets and the ten_tec_radio_net Group.

As you will hear, in April 2012, I purchased my first TEN-TEC radio, an Omni VII, after owning 17 other HF radios. My first task was to find an Omni VII reflector Group and after I subscribed to this Group, I asked where the TEN-TEC nets were being held. The answer from many people were, "John, there has not been any TEN-TEC nets for almost 4 years since Dudley (former Net Control) took a job at Flex Radio in Austin, TX".

I then asked for several people to get together on 40 meters the next Sunday afternoon for a round table discussion. We had 15 people show up (all with TEN-TEC radios) and it was very productive, as I received a lot of helpful information about my new Omni VII and also about the TEN-TEC Company.

I asked for us to get together the following Sunday and 50 people showed up (all with TEN-TEC radios). After that I was contacted by Jim Wharton, Vice President TEN-TEC Inc, asking me to take over as the new Net Control for the TEN-TEC 40 SSB net. I accepted and Jim posted this on the TEN-TEC Website.

After several months of running the TEN-TEC 40 meter SSB net on 7.261, I was asked by many people to consider starting a TEN-TEC 20 meter SSB net and I responded with a yes, and we started meeting on 14.325, following the 40 meter SSB net each Sunday.

With both the TEN-TEC 40 meter and 20 meter SSB nets growing in numbers each week, I was contacted again by Jim Wharton asking me what I thought about giving TEN-TEC Certificates to people that checked into the nets a certain number of times. We discussed this and decided that we would give a 10 checkin Certificate starting on January, 2013.

After posting this TEN-TEC Certificate Program on all 5 of the TEN-TEC reflector Goups, I started to receive negative emails stating that they were not interested in certificates and there were emails directed at me, my family and my religion with some very derogatory words.

In the spirit of turning the other cheek, I decided to stop posting on these other 5 TEN-Tec reflector Groups and I started our own group called the ten_tec_radio_net Group on March 20, 2013 (8 months ago).

Over 100 people subscribed the first day and we now have 176 members of this elite group. I want to thank everyone for your support and encouragement at that time, as I was about to relinquish my responsibilities of Net Control of the TEN-TEC 40 meter and 20 meter SSB nets.

The TEN-TEC Certificate Program has been very successful, as a multitide of people have already received their TEN-TEC 10 Checkin, 25 Checkin and 50 Checkin Certificates. We now have several members of our nets with over 90 checkins!

After attending this years TEN-TEC Hamfest in Sevierville, TN, I was asked by Lloyd N2KPC if he could start at TEN-TEC 10 meter SSB net and I said yes. Lloyd has been conducting his 10 meter SSB net for about 1 month. The time is 1PM Eastern Time each Sunday on 28.440.

About the same time, I was contacted by Ron WB1HGA asking me if he could start a TEN-TEC 40 meter CW net and if I could post it on our ten_tec_radio_net Group. I said yes and Ron has been conducting his 40 meter CW net each Monday at 7:30PM on 7.063.

About the same time, Bob ON4LDL, Brussels Belgium, wanted to start a TEN-TEC European Net on 3.650, I directed him to Jim Wharton and we both agreed.

So, as you can see, TEN-TEC is alive and well and I want to personally thank Jim Wharton for his full support for the TEN-TEC nets and also for the ten_tec_radio_net Group.

Again, thank you for your support and have a Happy and Blessed Thanksgiving Day today.

I have an Omni VI rev 3 that has been parted out. The PA and Driver stages have been sent to others needing them to get their Omnis back on the air. The Logic Board is solid and has the 564 eproms. The only board that is bad is the 5.0-5.5 PLL board. I have the complete cabinet and chassis. Complete with display boards, etc. If you have a 563, you may use the 9 mhz and 6 mhz boards and the buttons for the keypad to upgrade you 563 to the rev 3. Make me a good offer and I'll ship to your door.

Hi Andy,
We spent all day testing and had to rebuild the Isotron antenna just got done and walk in the DVRA shack.
On 3958 right now.
The coil input wire was arcing on the coil as you know and I just found out. the 12 and 17 meter worked very well which don't have the bid pvc wire round coil..
Looking for more input on short small type antennas pos. and neg. input most welcome please.

Lloyd,

You didn't really specify what you mean by "short small type" of antennas. Do you mean really tiny stuff such as a magnetic loop, or an Outback mobile antenna on a tripod, or do you also mean wire antennas which are considerably shorter than a half wavelength?

If you mean the ladder, then take a look at this one:

http://www.dj0ip.de/off-center-fed-dipole/small-80m-ant/

It is a small, 46' long wire antenna that works (50 Ohms) on 80/40/30/17/15/12m and 20 and 10 with a tuner, or even better if you add another short piece of wire to it. Although it is a "trick antenna", it supposedly is very popular in the UK as an alternative to the G5RV antenna. NOTE: I HAVE NOT PERSONALLY TRIED THIS ANTENNA. I normally don't talk about antennas that I have not personally tried but I only learned of this one last year and haven't found time to test it yet, due to so many other antennas I am working on.

If you meant really tiny, then have you ever tested a good magnetic loop antenna? I must always use the adjective "good" with magnetic loop antenna because there are probably 10x as many bad ones in the world as there are good ones. Unfortunately there is not much variety of Magentic loop antennas commercially available in the states. We have a few really decent brands over here but prices start around $1000, up to 3x that much for big ones. 90% of the information claiming they are not good, comes from people building and testing home brew loops, and they all make a couple of common mistakes, particularly "not using a differential variable capacitor."

They ISOTRON may very well work a little better on the higher bands. I've only played with them on 80 and 40 where saying I was disappointed is an understatement! My hunch is, a box-spring mattress placed outside and loaded with a remote tuner will work just as well on those bands! ;-)

Hi Rick,
We tried the G7FEK off center feed dipole yesterday and it work well. Thank You and we are trying to
stay away from ladder line and in doing so we try a 4:1 balun on several of the ladder line antennas.
I had to use a tuner off course and the 10 meter band load but it took some time.
We pretty much ruled out ladder line to keep a low profile look.
Trying to find base antennas of the wire type from 20 to 40 feet long or high.
The Magic Loop will be hear in a hour or so today and will give that a shot too.
The Easy Tenna on a fiberglass telescoping antenna mast vertical worked very well.
Bob, KD2EIM is here with me now in the DVRA Shack and has the EASY Tenna 24.5 foot stapled to hid railing 5 ft. off of the ground and EO CN CO SA and had fun. New Ham with antenna restrictions.

Look around You and find a New Technician Class or a Old one to get on HF maybe
for the first time and introduce them to the TENTEC Nets and maybe they will upgrade
to the General Class or even Extra Class to join the TENTEC Family on all of our Nets.
I had a 15 year old Teenager in the DVRA Shack today who is mostly Blind who learned half
of the Morse Code in one sitting and will get his Technician Class before long and lookout
Ron your going to have a high speed kid on your net soon.
Maybe a Church Group after Church, Scouts, School Class, Porch Club, Fire House, EMS Squad,
YMCA,Summer Camp,or even a Family BBQ.
Earl, WA3DX and Fatu KD3BHD asked me to drive to Maryland to setup a TENTEC Eagle at their
Wedding and they got on the air and made contacts right away before the reception.
There is a picture on WA3DX Earl's QRZ page show the back of my head HiHi and Earl making a
contact on a TENTEC Eagle with the TENTEC Regal 707 Desk Mike
run into a 10-80 Dipole setup in the back yard.
Everybody had fun and the kids got on the air too and saw Amatuer Radio, and a TENTEC RADIO
DEMO even before the reception.
See you on the TENTEC NETS later today. 73, Lloyd N2KPC

Lloyd,

The G7FEK does not use openwire as a feedline. It is actually two inverted-L antennas, running in opposite directions. The openwire is used as two separate wires, that’s all. You could substitute normal wires, as long as you keep them spaced apart.

Assuming you use a wooden or fiberglass pole, the short openwire runs up the pole, so it isn’t even noticeable.

One thing that would be interesting is some kind of comparison information for all of the antennas you are testing. Have you gathered any information that could be posted online?

If you don’t have a web site, I can post it on my web site under your name and call.

Ten Tec SSB Net - LIVE Audio Feed from Nashville, TN.
Direct link to Audio feed: http://www.qrz.com/db/KC2QMA http://www.qrz.com/db/KC2QMA

This audio feed will be available every Sunday from Nashville TN starting at (19:00 UTC 40M 7.261) & (20:00 UTC 20M 14.325).*Schedule & conditions permitting.
Go to the Link above and click on the play button in the video window and after a short advertisement the audio will begin to play. Some delay of the audio due to internet latency is normal.
(My station in Nashville is a Ten Tec Orion II - Wire dipole @75ft flat top)
During poor band conditions the receiver of the Ten Tec Orion II will be adjusted for best intelligible signal and may have reduced bandwidth and employ some DSP noise reduction.
Hope you enjoy and thanks for supporting the Ten Tec SSB NET!

# 1106. Will I ever make it to 50?

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-12-01 22:21:16 UTC
From: <tvman1954@...>
Topic: 1106  Message: 1106

Today we tuned up at 7.261 as always. Hearing John/K3UR with a potent signal, I thought the 40 meter check in would be a breeze as it always has been. All others on the band seemed to be down in signal a bit but, nothing major. When I had no success, there was a question as to propagation but, I tried several times. I have now found out that the same tuner settings for 40 meters are very close to what is needed for the antenna laying on the ground. First, I am amazed that the MFJ-989C will tune an antenna on the ground. Second, the antenna does not transmit very well while laying on the ground. Not to worry though. My friend and I have things under control. The antenna is hanging in the air once more. Ready for next Sunday. Just glad this didn't happen when it was time to call the Tennessee Phone Net. Our hope is that all enjoyed a Great Turkey Day. Merry Christmas to All ..... John, you still had a 25 over 9 signal. And it was truly Ground Wave.... Please, excuse the pun!

Wade, if you want to transmit with the antenna laying on the ground, just move to Oklahoma!

I once built a 40m dipole using wire with a very thick insulation.
Before putting it up, I got the idea to try it on the ground.
Called CQ (as a novice), first reply was a WN2 in NYC, and he gave me a 579.

Later a couple of kids my age created a contest with me to see who could work the most stations within a specified time period with an antenna laying on the ground. Was interesting, but of course nothing like having the antenna in the air.

Other than that, I can’t think of much else that is any good in Oklahoma! (hi)
(…except for a couple of good lookin’ cowgirls!)

hello Ten Tekkies,

A reminder the net is tonight at 7:30 Eastern time on 7063.

Tonight will begin certificate awards for check-ins. Awards are same as for phone. That is, 10, 25 and 50
check-ins certificate.

Protocol:
After I send "QNI" you send ur call, I will acknowledge and ask u to stand by (AS) as I take the nx station and so forth.
When I call u, send name, RST, State and radio (does not have to be Ten Tec radio)
I will log you in then call the next station on the list.

"see" u tonight!

Hi Tony,

No, I didn't win anything this time. I’m too old now. Don’t have enough stamina anymore.

It has been many years since I have won a CQWW CW, but I have had a few first places in a few different countries (years ago). And on team contesting I've lost count of how many first place (in country). At least 15 times.

I still hold the all time record for Liechtenstein (must have been 1994 or so).
That was in the class single operator, high power, "assisted".

Don’t know how my puny record has stood for so long.
In fact the guy who broke the record for high power, "unassisted", has a higher score than I do.

I guess the reality is, there are no locals there who are active as single operator, and not many fools from elsewhere are willing to go up into the Alps in late winter and spend 2 days outside putting up antennas is a freezing snow storm.

But I did break my personal goal, which was to break the million point barrier this year, from this lousy QTH.

Hello Ten Tekkies!

First of all, I need to apologize for my tardiness. I had just got home after being in a minor car accident.
(no one was hurt)

I got on air abt 7:50 PM (20=25 minutes late) and logged the following:

K8MAZ Mark MI Omni 7
KI8DU Roger WVA Jupiter
N8TJE Theodore OH Omni
N8ME Mark OH Omni 7
KD4AR Ed GA Omni 7

I thank you for waiting patiently to be logged in.
I am sorry I missed few others whom were waiting and left.
(I'll try to not get into any car accident next Monday night) (smile)

Thus begins our certificate program for making 10, 25 or 50 ck-ins,

I will keep the CW net on 40 meters. 80 meters was no better.

Progress is being made on installing my (first) tribander beam. The missing traps was rx yesterday
and will be attached thus completing the antenna assembly. All that remains now is a good day and
time to raise up the sucker. Then maybe we can try 20 meter net in future.

see you nx Monday night.

# 1134. Ten Tec SSB Net - LIVE Audio Feed from Nashville, TN

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-12-08 18:33:08 UTC
From: <kc2qma@...>
Topic: 748  Message: 1134

Ten Tec SSB Net - LIVE Audio Feed from Nashville, TN.
Direct link to Audio feed: http://www.qrz.com/db/KC2QMA http://www.qrz.com/db/KC2QMA

This audio feed will be available every Sunday from Nashville TN starting at (19:00 UTC 40M 7.261) & (20:00 UTC 20M 14.325).*Schedule & conditions permitting.
Go to the Link above and click on the play button in the video window and after a short advertisement the audio will begin to play. Some delay of the audio due to internet latency is normal.
(My station in Nashville is a Ten Tec Orion II - Wire dipole @75ft flat top)
During poor band conditions the receiver of the Ten Tec Orion II will be adjusted for best intelligible signal and may have reduced bandwidth and employ some DSP noise reduction.
Hope you enjoy and thanks for supporting the Ten Tec SSB NET!
73/John KC2QMA

# 1135. Ten Meters Net 12-8-2013---28 check ins

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-12-09 04:05:05 UTC
From: <n2kpc@...>
Topic: 1135  Message: 1135

The TEN-TEC Ten Meter SSB Net had a grand total of 28 check ins.
ZM90DX, John New Zealand, NJ-10, PA-2, TX-2 WV-2, AZ-2, SC-2, CO-1, GA-1, FL-1, KY-1, VT-1, TN-1, CN-1
I wish to Thank everybody that checked in for helping relaying in and out of the propagation dead zones of the 10 meter band.
You make me proud to serve you all.
Thank You Jim Wharton NO4A for your unending Support and hard work, time and most of all helping all of the people on the TEN-TEC NETS above and beyond the Call of Duty.
Thank You Stan Brock, WD0BGS for your hark work and time too.
I wish to the again John Magliano KC2QMA for live streaming the nets all the time because it takes a lot of his time away which He has to squeeze into everything else He does.
Back to Our Fearless Leader Jim Wharton who has brought a Net to us that will live on for a long time. The Club Station W2ZQ as reached over one hundred check ins and new and future Hams are listening to the TEN-TEC Nets all over the world.
How cool is that. Kids are tuning in on shortwave radio as well.
Now to John, K3UR who has spent a lot of time and hard work totaling everybody's check'ins, callsigns, names, states and radios. Then typing every thing up for us to look forward to every week to see our total scores and new check ins to the TEN-TEC Nets. Then he take the time to find out a bit about YOU and your radio setup, where you live, what kind of mike, antenna, audio, etc.
Thank God for this group and I Thank You .
Don't forget Ron, WB1HGA TEN-TEC CW Net at 7:30 PM Eastern, Monday.
73,
Lloyd N2KPC

# 1136. Ten Tec CW Net

From: Gandalf The Gray
Topic: 1110  Message: 1136

hello Ten Tekkies,

A reminder the net is tonight at 7:30 Eastern time on 7063.

You will receive credit towards a certificate for check-ins. Awards are same as for phone. That is, 10, 25 and 50
check-ins certificate.

Protocol:
After I send "QNI" you send ur call, I will acknowledge and ask u to stand by (AS) as I take the nx station and so forth.
When I call u, send name, RST, State and radio (does not have to be Ten Tec radio)
I will log you then I will call the next station on the list.

Remember, this is a slow speed net to encourage participation.

"see" u tonight!

Ron, wb1hga

All I can say is thank you. We had 14 check-ins including one from Canada last night.
There was a tad of confusion at one point and one station ck-in twice, but "all's well ends well".
I did manage to get weak ones too.
I hope I got everybody who wanted to ck-in last night.
The net was active for almost an hour!
I hope those of you in the snowstorm path are keeping warm and safe.
MA finally got snow. It started mid morning. No escaping Mother Nature's wrath of fury here.

See you all again nx week.

Hello Ten Tekkies!

It's that time again for the Ten Tec CW Net!
It's on tonight @ 00:30 (7:30 PM Eastern time).
7063 +/-

The basic exchange is:
ur name, QTH (state only is OK), RST and radio
(does not have to be Ten Tec).

This is a directed net. That means there is a net control station (NCS).
This is also a slow-speed CW net. This provides anyone a chance to brush up their CW skills and encourages more CW activity.

Certificates: Yes, contacts count toward a Ten TEC certificate.

Protocol:

The net will begin "CQ CQ CQ Ten Tec net de wb1hga wb1hga NCS QNI K"
QNI means "looking for ck-ins".

Send ur call at this time.

When I send a partial call like so: N1 ?. That means please repeat ur call.
All others please stand by.
I will then continue to send QNI until I have a list of stations to call.

QRS= pse send slower
QNB= relay

If you hear a station NCS cannot hear, send "QNB" then ur call.
I will rply "K"
You then proceed to gather station info. When done, send "QNI" and ur call.
I will send "K". U then proceed to relay that station's info.

see you tonight!

Ron wb1hga

I think we had fair band conditions to record 13 ck-ins.
2 stations were logged via relay, thanks to Mark N8ME.

We were on for almost an hour!

I may catch a partial call then repeat that call followed by ?
Several never replied.
If I did not catch ur call, sorry. I try to get everyone best I can.

Hope everyone is keeping warm and making the best of this cold spell.
see u all next week!

From: <kb1rvt@...>
Topic: 1156  Message: 1157

Thanks very much Mark, N8ME for the relay on Monday night. I find I can hear most of the stations 599 as they check-in, but the propagation between my QTH and the NCS is not good on 40M.

Ron, what is the protocol to request a relay on the CW net? I don't want to cause QRM for you or other stations. Will there be a time set aside for QNB requests?

Anyway, great fun to get in the CW Net log for the first time this week!

Happy Holidays to all!

73, Nick, KB1RVT

I am not John but I can answer your question.

In order to sign up, you have to have a Yahoo account, so you get a yahoo email address.

THAT DOES NOT MEAN YOU HAVE TO USE IT FOR ANYTHING!

I have had my yahoo email address for 15 years and never used it for anything except to sign up for groups.

Simply get yourself another email account which pleases you and once you sign up for a yahoo group, go into your user profile.

There you can define what email address the group posts are sent to.

Enter your new email address there, and you're done.

73

This may be a little late (for today), but the Daily CW Sunrise Net starts a 8AM every morning on 7.123 mHz.

Great group of cw ops. So if you want to join in or just listen in....here you go.

This is the only other CW Net that I'm aware of. So if you're interested in CW Nets then come pay a visit. Its anywhere from 17/18 wpm.

The net goes on for a couple of hours. Every one is welcomed.

# 1168. Passing thru NJ and want to see a Eagle ?

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2013-12-22 15:18:49 UTC
From: <n2kpc@...>
Topic: 1168  Message: 1168

Hello Everybody,
First off My Wife Gaye KB2YOA and myself Lloyd N2KPC wish you a Very Merry Christmas and a Happy New Year with safe travel if your on the road to visit family.
Last night I had several future hams along with some old timers drive up to two hours to see the DVRA W2ZQ Shack and I just finished with a bunch of kids giving a demo with the TEN-TEC Eagle. Also had the pleasure of meeting Dick KA2NBB who drove two hours from Egg Harbor, NJ and brought his TEN-TEC Corsair 2 with him.
There will be at least thirty new people listening in to the TENTEC Nets today who are not Hams yet, but have had a Eagle Demo yesterday, got to see PSK31, CW SSTV, DX, Packet, a TENTEC Kit built, and see how a repeater system works.
Today they will get a chance to hear the TENTEC Family in action on the nets.
I am on vacation until 1-6-2014 and will be here most every day at the W2ZQ DVRA Shack in West Trenton, New Jersey if you are pass thru the area and wish to stop by for a visit. There is a TENTEC 599 Eagle for you to try if you would like to with some yagi's antennas 10 thru 40 meters to burn a hole thru the air, HIHi.
If you going to stop by call the DVRA Shack phone at 609-882-2240 or send me a email at n2kpc@arrl.net mailto:n2kpc@arrl.net and we will be here. Kids, inlaws, outlaws and Radio Finding Dogs are most welcome, HiHi.
We are Ten-Tec fans and use Ten-Tec radios all the time. I want to thank Jim Wharton, NO4A Vice President of TEN-TEC, Inc. for all of his hard work and time he has given to help all of us above and beyond the call of duty. I want to thank Stan Brock, WD0BGS of Ten-Tec, Inc.Sales for always helping me with information and questions and being a good Elmer. Thank's go to Stuart Banks, AD4LN of Ten-Tec Sales for all of his help as well. The team at TEN-TEC has helped Amateur Radio by being devoted to the Hobbie and all of us as well. I want to thank the ARRL for all that they do for all of us too.
Ten-Tec's service is the best that you can find anywhere because they are Hams and they care about you and take pride in TEN-TEC.
I am The Official Net Control Station for the 10 Meter Ten-Tec SSB Net.
I am theThe Official Relay Station on 40 and 20 Meters for The Ten-Tec SSB Net to help Net Control Station, K3UR, John in Georgia with anyone that wishes to check in with any radio from anywhere, local or DX, all are welcome.
Thank You John for your time and hard work for the Net.
You can listen to the Ten-Tec SSB Net via a live link thru QRZ by looking up KC2QMA, John in Nashville, TN and you can hear what your station sounds like in TN. Just click on the video screen on his QRZ page. Thank You John, KC2QMA for your time and hard work for the Net.
The TEN-TEC Net Schedule :
Sunday 1:00 PM Eastern Time: 10 Meter SSB net on 28.440. Lloyd N2KPC, Net Control.
Sunday 2:00 PM Eastern Time: 40 Meter SSB Discussion net on7.261. John K3UR, Net Control.
Sunday 300 PM Eastern Time: 40 Meter SSB net on 7.261. John K3UR, Net Control.
Sunday 4:00 PM Eastern Time: 20 Meter SSB net on 14.325. John K3UR, Net Control.
Monday 7:30 PM Eastern Time: 40 Meter CW net on 7.063. Ron WB1HGA, Net Control.
Wednesday 2100 local Brussels Belgium Time (1900) UTC): European SSB net on 3.650. Bob ON4LDL, Net Control.
See the Ten-Tec Web Site at www.tentec.com for more information.

Also check out the TEN-TEC RADIO NET GROUP on Yahoo and find out about the TEN-TEC CERTIFICATE PROGRAM.
The TEN-TEC SSB NET is a great source of information with Hams on the air to help you with your Home Station, Mobile, RV, QRP.
I want to say Thank You to Everybody on the TEN-TEC SSB Net who checks in and helps the other Hams by relaying and waiting when
John, K3UR and I might pause the list and pick up a weak station. God Bless and keep you all of you safe and help us find the good that
comes from this great hobbie to share with each other at all times world wide.
It is nice to have Hams that know and care about each other and understand that we all are not hearing the same station the same way.
Have a good day and hope to hear each and every one of you on the TENTEC Nets
today and Monday's Ron's CW Net a well.
God Bless Your and Yours thru the Holidays .-.-.- --... ...--
Gaye KB2YOA and Lloyd N2KPC

As you can see, with the exception one in KY, there were no stations in the middle of the country able to check in. I never hear the net control on Ten Meters here in Indiana. Propagation is usually to the west here at net time. Any consideration of using an alternate 6 or 7 land station to listen for the midwest?

73,
Steve K9DY

John, I want to thank you, Lloyd, John, all the relay stations and Jim Wharton for all the hard work you do. It's great to be a part of this group! And thanks for the double check-ins for Sunday John.

Lloyd, I could not hear you at all on 10 meters when we tried, no propagation. Signals on 40 and 20 were great here, though, in the mobile NW of Chicago.

Merry Christmas and Happy New Year to all!

73 Andy K9ARM

---In ten_tec_radio_net@{{emailDomain}}, <k3ur@...> wrote:

I am re-sending the net results because I corrected the 50 Checkin Certificate Winners. (I had put 20 instead of 50).

I also forgot to mention that in the spirit of Christmas, I gave everybody that checked into the nets double checkin credits. Some people received 8 checkin credits for checking into all 4 nets. If you checked into 3 of the nets you got 6 checkin credits. If you checked into 2 of the nets you got 4 checkin credits. If you only checked into 1 of the nets you got 2 checkin credits.

Thanks again for all of your support.
---

I want to reflect on this HOLIDAY SEASON. To many it is a time of giving and exchanging gifts. To others in the business field, it is a time for increased sales. To some it is a sad time, because they have lost loved ones through death, separation and divorce. Many are hurting financially because they have lost their jobs and sickness has drained many of their finances.

I want to focus on the real meaning of this holiday season. We celebrate Christmas because it is the birthday of our Lord and Savior Jesus Christ. He left heaven and took upon Himself the form a person. He was born to die for OUR sins and He no longer hangs on the cross or lays in the tomb. HE IS RISEN! He is seated at the right hand of God the Father making intercession for us today. Let us keep CHRIST in CHRISTMAS!

On behalf of the TEN-TEC nets and the ten_tec_radio_net Group, I want to wish all of you a MERRY CHRISTMAS and a HAPPY NEW YEAR, with the best of health and happiness for you and you families.
---
Here are the net results from this past weeks nets.

26 checkins on 10 meter SSB net on 28.440. Lloyd N2KPC, Net Control.

103 checkins on 40 meter SSB net on 7.261. John K3UR, Net Control.

84 checkins on 20 meter SSB net on 14.325. John K3UR, Net Control.

7 checkins on 40 meter CW net on 7.063. Ron WB1HGA, Net Control.

Roger,

I keep two lists. They are a “to do” list and a “forgot to do” list. Guess which one grows as the other shrinks. Anyway, thanks for keeping me in mind a couple of nets ago. These days I’m antenna challenged since a high wind collapsed a near dead beech tree which fell taking out my horizontal loop and a doublet as well. Managed to cobble the doublet into a sloper and have been limping along since. Can’t do much more ‘til Spring.

Hope all goes well next week and will listen for you. Meanwhile, have a very happy new year and if you’re getting into SKN, gl.

73,

Mark, k8maz

# 1204. Re: [ten_tec_radio_net] TEN-TEC NET RESULTS FROM DECEMBER 29th and 30th 2013

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-01-02 16:50:31 UTC
From: Ron
Topic: 1201  Message: 1204

The first three are correct in my log. The last one was entered incorrect. My bad.
Looks like I need to watch my keypad on thiscell.

I do not have internet now but this cell phone.
It can become tedious typing out a message.

I will send logs to u as attachment from now on. I can list stations on pc (real keypad) then use cell fone to send.

My apology to those 4 affected. Usually the station I call, will correct me on their call. Sometimes band conditions affect accuracy. Only the station being called can insure I got their call correct.

Ron wb1hga

Hi Everybody,
It is going down to a -4 F tonight in Mt. Holly, NJ Beginning to t.
hink we are in ND, HiHi.
Sat. Jan. 4 sometime after 9:00 AM I will be on the air with the TENTEC Eagle demoing HF to the Boys Scouts for the annual Radio Merit Badge Day at the College of New Jersey. We have over 45 Scouts registered. If you are around keep a ear on or about 14,325 and 28.440 since the SFI has jumped way up to 182 and that should have ten meters hopping.
4000 Boy Scouts got their Radio Badges in 2013.
Boy Scouts & Radio - Being Prepared!

History
The Boy Scouts of America (BSA) and the development of Radio both began at the beginning of the twentieth century and share a common public service ethic. Wireless Merit Badge was one of the earliest BSA merit badges when established in 1919 and changed to it's current name in 1923.

Merit Badges
Merit badges give Scouts the opportunity to explore a hobby or vocation to see if it interests them. They are not designed to make them proficient in an area. We should not expect Scouts who complete Radio Merit Badge to be fully licensed hams, any more than we expect those who complete Engineering Merit Badge to be able to construct a railroad bridge. However, Radio Merit Badge is a natural lead in to a Technician License prep course.

Target Audience
The target audience will be young men aged 12 to 15 who may or may not be terribly interested in radio, but are interested in earning a badge to advance in Scouting. In order to give each student attention, a class size of ten or less is recommended to start, but can be a bit larger if there are sufficient instructors.

While every boy is different, as a rule they like adventure, excitement, activity and learning things. Their attention span is short, so no topic should be more than twenty minutes. Breaking things up between mental activities, such as learning Q signals, and physical activities, such as hunting a hidden transmitter maintains interest. Remember that this is our opportunity to sell radio as fun!

An obvious question is "what about Girl Scouts? " While there's no reason the course couldn't be co-ed, the US Girl Scout program does not currently have a radio oriented badge. One solution is for Girl Scout leaders who are hams is to petition their local GSUSA Council to create a "council own" Radio proficiency badge. The techniques for doing this can be found from your local Girl Scout Council.
(Requirements from January 2009 Boy Scout Requirements Book)

To Earn Radio Merit Badge, a Scout Must:

1. Explain what radio is. Then discuss the following:
a. The differences between broadcast radio and hobby radio
b. The differences between broadcasting and two-way communications
c. Radio station call signs and how they are used in broadcast radio and amateur radio
d. The phonetic alphabet and how it is used to communicate clearly.
2. Do the following:
a. Sketch a diagram showing how radio waves travel locally and around the world. Explain how the broadcast radio stations WWV and WWVH can be used to help determine what you will hear when you listen to a shortwave radio.

b. Explain the difference between a DX and a local station. Discuss what the Federal Communications Commission (FCC) does and how it is different from the International Telecommunications Union.
3. Do the following:
a. Draw a chart of the electromagnetic spectrum covering 100 kilohertz (kHz) to 1,000 megahertz (MHz).

b. Label the MF, HF, VHF, UHF, and microwave portions of the spectrum on your diagram.

c. Locate on your chart at least eight radio services, such as AM and FM commercial broadcast, citizens band (CB), television, amateur radio (at least four amateur radio bands), and public service (police and fire).
4. Explain how radio waves carry information. Include in your explanation: transceiver, transmitter, reciever, amplifier, and antenna.

5. Do the following:
a. Explain the differences between a block diagram and a schematic diagram.

b. Draw a block diagram for a radio station that includes a transceiver, amplifier, microphone, antenna, and feed line.

c. Explain the differences between an open circuit, a closed circuit, and a short circuit.

d. Draw eight schematic symbols. Explain what three of the represented parts do. Find three electrical components to match to three of these symbols.
6. Explain the safety precautions for working with radio gear, including the concept of grounding for direct current circuits, power outlets, and antenna systems.

7. Visit a radio installation (an amateur radio station, broadcast station, or public service communications center, for example) approved in advance by your counselor. Discuss what types of equipment you saw in use, how it was used, what types of licenses required to operate and maintain the equipment, and the purpose of the station.

8. Find out about three career opportunities in radio. Pick one and find out the education, training and experience required for this profession. Discuss this with your counselor, and explain why this profession might interest you.

9. Do ONE of the following (a OR b OR c):
a. AMATEUR RADIO
(1) Tell why the FCC has an amateur radio service. Describe some of the activities that amateur radio operators can do on the air, once they have earned an amateur radio license.

(2) Using proper call signs, Q signals, and abbreviations, carry on a 10-minute real or simulated ham radio contact using voice, Morse code or digital mode. (Licensed amateur

radio operators may substitute five QSL cards as evidence of contacts with amateur radio operators from at least three different call districts.) Properly log the real or simulated ham radio contact and record the signal report.

(3) Explain at least five Q signals or amateur radio terms you hear while listening.

(4) Explain some of the differences between the Technician, General and Extra Class license requirements and privileges. Explain who administers amateur radio exams.

(5) Explain how you would make an emergency call on voice or Morse code.

(6) Explain the differences between handheld transceivers and home "base" transceivers. Explain the uses of mobile amateur radio transceivers and amateur radio repeaters.
b. BROADCAST RADIO
(1) Prepare a program schedule for radio station "KBSA" of exactly one-half hour, including music, news, commercials, and proper station identification. Record your program on audio tape or in a digital audio format using proper techniques.

(2) Listen to and properly log 15 broadcast stations. Determine the program format and target audience for five of these stations.

(3) Explain at least eight terms used in commercial broadcasting, such as segue, cut, fade, continuity, remote, Emergency Alert System, network, cue, dead air, PSA, and playlist.
c. SHORTWAVE LISTENING
(1) Listen across several short-wave bands for four one-hour periods, - at least one period during the daylight hours and at least one period at night. Log the stations properly and locate them geographically on a globe.

(2) For several major foreign stations (BBC in Great Britain or HCJB in Ecuador, for example), list several frequency bands used by each.

(3) Compare your daytime and nighttime logs; note the frequencies on which your selected stations were loudest during each session. Explain differences in the signal strength from one period to the next.
The Scout Staff ask for my help in this event.
A prefect time to show what a TENTEC Radio can do on HF to the Boy Scouts and a lot of College
Students too.
73,
Lloyd N2KPC

(1) Prepare a program schedule for radio station "KBSA" of exactly one-half hour, including music, news, commercials, and proper station identification. Record your program on audio tape or in a digital audio format using proper techniques.

(2) Listen to and properly log 15 broadcast stations. Determine the program format and target audience for five of these stations.

(3) Explain at least eight terms used in commercial broadcasting, such as segue, cut, fade, continuity, remote, Emergency Alert System, network, cue, dead air, PSA, and playlist.
c. SHORTWAVE LISTENING
(1) Listen across several short-wave bands for four one-hour periods, - at least one period during the daylight hours and at least one period at night. Log the stations properly and locate them geographically on a globe.

(2) For several major foreign stations (BBC in Great Britain or HCJB in Ecuador, for example), list several frequency bands used by each.

(3) Compare your daytime and nighttime logs; note the frequencies on which your selected stations were loudest during each session. Explain differences in the signal strength from one period to the next.
The SFI is up to182 so the bands should be hopping.
I should be on or about 28.440 USB and or 14.325
USB.
73,
Lloyd N2KPC

Topic: 1206  Message: 1207

(Requirements from January 2009 Boy Scout Requirements Book)

To Earn Radio Merit Badge, a Scout Must:

1. Explain what radio is. Then discuss the following:
a. The differences between broadcast radio and hobby radio
b. The differences between broadcasting and two-way communications
c. Radio station call signs and how they are used in broadcast radio and amateur radio
d. The phonetic alphabet and how it is used to communicate clearly.
2. Do the following:
a. Sketch a diagram showing how radio waves travel locally and around the world. Explain how the broadcast radio stations WWV and WWVH can be used to help determine what you will hear when you listen to a shortwave radio.

b. Explain the difference between a DX and a local station. Discuss what the Federal Communications Commission (FCC) does and how it is different from the International Telecommunications Union.
3. Do the following:
a. Draw a chart of the electromagnetic spectrum covering 100 kilohertz (kHz) to 1,000 megahertz (MHz).

b. Label the MF, HF, VHF, UHF, and microwave portions of the spectrum on your diagram.

c. Locate on your chart at least eight radio services, such as AM and FM commercial broadcast, citizens band (CB), television, amateur radio (at least four amateur radio bands), and public service (police and fire).
4. Explain how radio waves carry information. Include in your explanation: transceiver, transmitter, reciever, amplifier, and antenna.

5. Do the following:
a. Explain the differences between a block diagram and a schematic diagram.

b. Draw a block diagram for a radio station that includes a transceiver, amplifier, microphone, antenna, and feed line.

c. Explain the differences between an open circuit, a closed circuit, and a short circuit.

d. Draw eight schematic symbols. Explain what three of the represented parts do. Find three electrical components to match to three of these symbols.
6. Explain the safety precautions for working with radio gear, including the concept of grounding for direct current circuits, power outlets, and antenna systems.

7. Visit a radio installation (an amateur radio station, broadcast station, or public service communications center, for example) approved in advance by your counselor. Discuss what types of equipment you saw in use, how it was used, what types of licenses required to operate and maintain the equipment, and the purpose of the station.

8. Find out about three career opportunities in radio. Pick one and find out the education, training and experience required for this profession. Discuss this with your counselor, and explain why this profession might interest you.

9. Do ONE of the following (a OR b OR c):
a. AMATEUR RADIO
(1) Tell why the FCC has an amateur radio service. Describe some of the activities that amateur radio operators can do on the air, once they have earned an amateur radio license.

(2) Using proper call signs, Q signals, and abbreviations, carry on a 10-minute real or simulated ham radio contact using voice, Morse code or digital mode. (Licensed amateur radio operators may substitute five QSL cards as evidence of contacts with amateur radio operators from at least three different call districts.) Properly log the real or simulated ham radio contact and record the signal report.

(3) Explain at least five Q signals or amateur radio terms you hear while listening.

(4) Explain some of the differences between the Technician, General and Extra Class license requirements and privileges. Explain who administers amateur radio exams.

(5) Explain how you would make an emergency call on voice or Morse code.

(6) Explain the differences between handheld transceivers and home "base" transceivers. Explain the uses of mobile amateur radio transceivers and amateur radio repeaters.
b. BROADCAST RADIO
(1) Prepare a program schedule for radio station "KBSA" of exactly one-half hour, including music, news, commercials, and proper station identification. Record your program on audio tape or in a digital audio format using proper techniques.

(2) Listen to and properly log 15 broadcast stations. Determine the program format and target audience for five of these stations.

(3) Explain at least eight terms used in commercial broadcasting, such as segue, cut, fade, continuity, remote, Emergency Alert System, network, cue, dead air, PSA, and playlist.
c. SHORTWAVE LISTENING
(1) Listen across several short-wave bands for four one-hour periods, - at least one period during the daylight hours and at least one period at night. Log the stations properly and locate them geographically on a globe.

(2) For several major foreign stations (BBC in Great Britain or HCJB in Ecuador, for example), list several frequency bands used by each.

(3) Compare your daytime and nighttime logs; note the frequencies on which your selected stations were loudest during each session. Explain differences in the signal strength from one period to the next.

Hi Oz,
Thanks for the contacts to the Boy Scouts at The College of NJ. The Scouts enjoyed talking to you
very much and You are the first HF contact that they will always remember. I told them they could
find the OZ on the TENTEC Nets and they wrote down your call sign with not being asked to do so.
So the Oz made a great spark in the life of some Boy Scouts today, Thank's to the Great OZ.
I also want to that Andy W3LI for being there thru the hole Event too.
The Scouts had three one hour classroom sessions and the Event went from 9:00 AM to 2:30 PM.
It was a great success for Amatuer Radio and Science.
I will be on 3958 LSB at 7:00PM tonight and see you all on the TENTEC Nets Sunday "tomorrow"
We lost 20 meters for a while and I drove back to the DVRA Shack to make more contacts to the Scouts
from the Club.
NJ3U Rory stayed at the W2ZQ/p station at the college to Elmer the Scouts on the air to OZ and myself
when I returned to the DVRA Shack, Thank You Rory.
So some of the Scouts will be listening to the TENTEC Nets Sunday and we can't ask for more than that.
73,
Lloyd N2KPC

Ten Tec SSB Net - LIVE Audio Feed from Nashville, TN.
Direct link to Audio feed: http://www.qrz.com/db/KC2QMA http://www.qrz.com/db/KC2QMA

This audio feed will be available every Sunday from Nashville TN starting at (19:00 UTC 40M 7.261) & (20:00 UTC 20M 14.325).*Schedule & conditions permitting.
Go to the Link above and click on the play button in the video window and after a short advertisement the audio will begin to play. Some delay of the audio due to internet latency is normal.
(My station in Nashville is a Ten Tec Orion II - Wire dipole @75ft flat top)
During poor band conditions the receiver of the Ten Tec Orion II will be adjusted for best intelligible signal and may have reduced bandwidth and employ some DSP noise reduction.
Hope you enjoy and thanks for supporting the Ten Tec SSB NET!

From: Gandalf The Gray
Topic: 1223  Message: 1223

hello Ten Tekkies!

Ahh, it's nice to have internet again.
For a little while, I used the cell fone.
Trying to use the cell fone tiny keypad is tedious.
It's nice to type on a real keyboard!

The CW net is on again Monday night at 7:30 PM Eastern time (00:30 Z).
We'll be gathering at 7063 +/- as usual.

Please note an important change:

When u sign in, please use the LAST TWO LETTERS OF YOUR CALL.
When I acknowledge repeating those two letters, please stand by as I collect
more stations to the que.

Also:
The exchange is: RST, name, state, radio. (doesn't have to be TT)

Receiving credits toward a certificate is too important. When one receives such a
certificate, we all can be assured it was earned proper.

So
when I send QTH ? or name ? or radio ? it means I need u to repeat.

I will do my best to receive ur exchange so u will be counted.
This is where relay stations are important.

If u hear a station that NCS cannot hear or is having trouble copying, please by all means
send QNB then ur call. I will send K.
U then proceed to collect data.
When completed, send QNB and ur call agn.
I will send K.
U then send me that data.

Sorry gang for the long message.(smile)

I hope u all had Happy Holidays.
I'm looking forward to our first CW net of the new year!

73
Ron, wb1hga
TT CW NCS
(BTW: it took less time to type this on me PC than it wud on the cell fon keypad-smile)

# 1236. Ten Tec net tonight

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-01-06 22:38:56 UTC
From: Gandalf The Gray
Topic: 1236  Message: 1236

Hello Ten Tekkies!

A brief reminder the TT CW net on 7063 begins 00:30 Z (7:30 PM Eastern time).

This is a slow speed net (up to 13 wpm).

New comer or old timer are welcomed.

Dust off that key. Connect them paddles.

This net is to encourage CW activity and provide means to practice.
"Breakneck speeds" are discouraged.

The exchange is:
RST, NAME, STATE, RIG (does not have to be Ten Tec)

Remember the new procedure:

After calling QNI (looking for stations) please sign using the LAST 2 LETTERS of ur call.
When I acknowledge, stand by so I may add more stations to the que.

During the que, when I send the last two letters and it is ur call, then send ur full call and proceed with the exchange.

see ya tonight!

Ron, wb1hga
TT CW NCS

# 1237. TENTEC 10 Meter SSB Net 36 Check ins 1-5-2014

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-01-07 04:12:13 UTC
From: <n2kpc@...>
Topic: 1237  Message: 1237

We had 36 stations check in to the TENTEC Ten Meter SSB Net. NJ-14, Brazil-4,
CO-3, TX-3, AZ-2, PA-2, KY-2, CN-2, WV-1, MA-1, FL-1, GA-1.
Thank You for the relays and give a call for more stations.
A couple of stations I only hear once then the band propagation changed which
ten meters likes to do sometimes. Thank's to you who tried and we will try again
next week. I want to thank a Father KC2VDL Steve and Son KC2VDM Alex Team who are Members
of the DVRA Club Station W2ZQ in West Trenton NJ for jumping in fixing a antenna port
problem in the severe cold at net time so I could use the big two element 40 meter yagi and
the 10 thru 20 meter fourteen element yagi which lets me get a lot more check ins to our
TENTEC Nets on 10-20-40 meters. Alex built the TENTEC 20 Meter QRP Kit and is have a lot of
fun with it on CW. There is a picture
of it on photos here on this site. Good going Alex.
Stay warm and watch out for the frostbite and your pets.
Please feed the birds suet, sunflower and white millet, and try to put some water out too
because people forget the water. There are little antennas on our bird boxes, HiHi.
73,
Lloyd N2KPC

# 1238. Water and Ice antenna elements

From: <n2kpc@...>
Topic: 1238  Message: 1238

The weather is very bad here it rained all day, it made to the sixties in the am and now it is going to be a -22 to -27 below zero with wind chill.
A drop of over 60 degrees in 7-8 hours, ice everywhere that a puddle remains, the 40-45 mph wind with a high Tuesday of 8-12F. here in Mt. Holly, NJ.
Had to cap vertical antenna elements so the water would not get in them and split them, "homebrew yagi on the ground, work in progress" when they freeze.
Good luck and check your SWR's.
Lloyd N2KPC

# 1257. NJ Radio Club approved saving for NEW TENTEC HF tonight

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-01-09 06:18:05 UTC
From: <n2kpc@...>
Topic: 1257  Message: 1257

The DVRA Club in NJ approved tonight with Hurricane Sandy in mind to start saving for a TENTEC Omni 7 for several reasons.
#1 Remote operations if no one can get to the Radio Shack because if Ice, Snow, Trees down "Like during Sandy", etc.
#2 They got to hear the Omni 7 on the TENTEC Nets.
#3 They saw and got to use one at the Radio Shack.
#4 They tried a TENTEC Eagle at Summer and Winter Field Day and I made sure that TENTEC Radio was at every event to Demo.
#5 It was stated at the meeting that they wanted a radio that everybody could use with ease at any time fast without having to go thru many steps in a emergency.
The Delaware Valley Radio Association has had many members check into the TENTEC Nets and hear what all of you have stated. The Club thinks the TENTEC Nets promotes Amatuer Radio Better than any other net and allows me to use the shack Every Sunday because of You the TENTEC Family.
#6 The DVRA is a Non-Profit,show case for the hobbie and the TENTEC Nets too.
How about your club, don't have one, start one of your own or build up a old one buy just being there with your own Radio to show them what a TENTEC can do.
I did not have to talk them in to it, YOU DID. Thank You 73, Lloyd N2KPC

# 1258. Ten Tec Radio Net check-in totals

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-01-09 14:02:18 UTC
From: Dexter Alexander
Topic: 1258  Message: 1258

John,

Please review the check-in totals for W4DLA.

The check-in spreadsheet for 12-29-13 correctly shows W4DLA's check-in total at 59. However the 1-5-14 spreadsheet incorrectly shows W4DLA's check-in total at 61.

I checked in to only one net on 1-5-14, the 40 meter net at 1340Z. My correct total should be 60, I believe.

Best regards,

Dexter W4DLA

Date: 2014-01-09 15:30:12 UTC
From: John Occhipinti
Topic: 1261  Message: 1261

The ten_tec_radio_net Group is the ideal place for net members to post any concerns or problems with any TEN-TEC products. Although we welcome questions or concerns during the various nets, many do not have good enough copies on each other to effectively communicate with each other.

So the logical place to voice concerns are right here, where many people can assist with most concerns or problems.

No question will be considered too trivial or dumb. Ask and it shall be given!

Thank you.

# 1270. My slow trip to 50 Check-ins !

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-01-13 16:49:09 UTC
From: <tvman1954@...>
Topic: 1270  Message: 1270

Greeting to All,
It looked like December would see the 50 Check-in Certificate on my Shack Wall. Then Life Happened. With Christmas and also a brief trip to the hospital, we missed that deadline. Now there is the 2004 Chevy Aveo, the preferred car of my sweetie, Miss Brenda. Please, allow me to vent some frustration. It is a Pot Metal Engine with Plastic Timing Pulley's. The Thermostat Housing is even Plastic. In short, the Cheapest made Car I have ever seen. If Ten Tec made Radio's the way Chevy ( Daewoo Lanos of Korea ) makes Cars! I would Never want to own one. Who ever heard of the need to tear the Engine Down every 30,000 miles to Check the Timing Belt? And Replacement every 60k, and even then, the thing still may just Grenade and bend 1,500 to 3,200 Dollars in Valves and Pistons at any moment. Therefore, my Ten Tec Sundays have been changed to Under the Hood of a Junk Heap Sundays. Please, forgive my Slow March to 50 Check-In status. On the bright side, I was really pleased to see how well the Paragons are represented on the Nets. Maybe, I should fire the Omni D up and check in to get their numbers up some. Anyway, stuck here at 47 Check-in's and struggling for the last 3 is Wade/KJ4WS 73 to all. Still upset about Plastic Parts in Car Engines. Seems awfully silly to me. Heck, I can't even find good metal replacements. Get those Timing Belts Checked Folks. If not, get yourselves some comfortable Walking Shoes!
May God Bless and 73 from Wade

John,
I did a rebuild of 3 Philco Predicta's ( Alien picture tube sticking up on a swivel base ) TV's for the Goldstar Corp. They were used a the Olympic Pavilion at Atlanta several years ago. They paid this old man GOOD MONEY to set these 3 sets in working order. I love restoring the good stuff..... If we can be of any help..... just give a shout!

Can you guys tell me what you think?????????
I am done dealing with Ten-Tec after 3 trips and not being fixed right.Does anybody know a technician that will be willing to fix it??????????
Go listen to it here:https://www.youtube.com/watch?v=UXrsr020KDY
I know this is not they way it should sound!!!!!!!!!!!
Thank you for taking the time to read my posting.73.....Bill / N1ASS.

Topic: 1270  Message: 1273

Wade-

I owned a 72 Vega and feel your pain. The aluminum block engine scored, had plastic valve seals that melted and I burned a quart of oil every 50 miles. I kept 3 sets of clean spark plugs and a 12 volt cleaner as I fouled a set every 300 miles. I got to the point where I could pull over, add oil and change the plugs in less that 15 minutes. What fun.

Best of luck.

73,

Steve, N4EUK

Now there is the 2004 Chevy Aveo, the preferred car of my sweetie, Miss Brenda. Please, allow me to vent some frustration. It is a Pot Metal Engine with Plastic Timing Pulley's. The Thermostat Housing is even Plastic. In short, the Cheapest made Car I have ever seen. If Ten Tec made Radio's the way Chevy ( Daewoo Lanos of Korea ) makes Cars! I would Never want to own one. Who ever heard of the need to tear the Engine Down every 30,000 miles to Check the Timing Belt? And Replacement every 60k, and even then, the thing still may just Grenade and bend 1,500 to 3,200 Dollars in Valves and Pistons at any moment. Therefore, my Ten Tec Sundays have been changed to Under the Hood of a Junk Heap Sundays. Please, forgive my Slow March to 50 Check-In status. On the bright side, I was really pleased to see how well the Paragons are represented on the Nets. Maybe, I should fire the Omni D up and check in to get their numbers up some. Anyway, stuck here at 47 Check-in's and struggling for the last 3 is Wade/KJ4WS 73 to all. Still upset about Plastic Parts in Car Engines. Seems awfully silly to me. Heck, I can't even find good metal replacements. Get those Timing Belts Checked Folks. If not, get yourselves some comfortable Walking Shoes!

Hello!

Yep, it's that time again. Tonight at 7:30PM Eastern time (00:30 Z)
Remember, sign ur last two letters of ur call.
When I acknowledge, then standby while I look for more stations in que.

If u can hear a station NCS cannot hear, please send QNB (relay) and ur call.
I will send "K". U then proceed to collect that stations data.
When finish, u call QNB and ur call again.
I will send "K", then u proceed to relay that info.

Exchange is :
Name, State, RST then radio u r using.

this is a slow speed net. Please keep speeds to 13 wpm or less.

Having had no luck in selling an Omni VVI for an SK's widow I have decided to purchase it myself. My question is whether or not there is a basic setup for the rig. The fellow who owned it used it only on SSB but I will be on CW and the digital modes most of the time.

I'm sure there are a lot of settings that need to be changed so I thought I'd come to the group that knows about Ten Tec rigs.

I am forwarding a letter from Jim Wharton NO4A. Congratulations to Jim Wharton, the new President of TEN-TEC Inc.

John, K3UR

---

Dear Friends,

I would like to take a few moments to wish our customers and Ambassadors a very Happy New Year and thank you all for another abundant year at TEN-TEC. We have seen many unique changes to the electronic industry this past year and again we continue to persevere with a comprehensive design philosophy and customer acceptance throughout the world.

So, what will happen at TEN-TEC in 2014 and what unique advantage can you expect from this American manufacturer? As of January 1st we have had a very positive changing of the guard. Jack Burchfield, has turned over his daily management responsibility to myself, Jim Wharton. Jack will still remain as CEO and majority stock holder of TEN-TEC, however his plans to begin retiring and spending more time with family will begin this year. My challenge will be to coordinate and oversee production, improve scheduling and manage our design and sales teams. In short, my goal for TEN-TEC is for more unique and affordable Ham products, speedier production time, and more innovative technology.

Will our new strategy make a difference? Without a doubt. With your help, you will see a greater presence in the Ham community, offering more affordable products plus unique new items that TEN-TEC customers have requested. Thank you again for another great year. We hope you will continue to tell others about some of the positive and innovative changes going on here at TEN-TEC.

Sincerely & 73,

Jim Wharton, President

TEN-TEC, Inc.

From: EDWARD SCHUMACHER
Topic: 1272  Message: 1293

I am assuming that since the radio has been worked on by Ten-Tec that the old issue of the solder joints at the transformers on both the major and minor loop boards have been eliminated as a cause. That was the only problem I ever had with my original Paragon that caused distortion, though on both receive and transmit usually. It did recur more than once during the ownership of my Paragon but was eventually completely cured. I was able to do these repairs myself after talking to the tech. Don't believe the boards are available anymore as I was told I got one of the last ones and that was some years ago.

Another possibility, kind of far out, have the frontend PIN diodes been checked to verify that only the proper one at a time is turning on? They are susceptible to damage and strange things can happen if more than one at a time are on. Mine showed up as a receive issue but could possibly affect transmit. I was advised to either disconnect or ground my antenna feed when the rig was not in use. I had lost several diodes and decided to let Ten-Tec do the work which was just as well because it turned out the chip had been damaged too. Hope this helps.

Hi Bob

I have listen every week for since you started the European TT net and only on the occasions when we have managed to work did I hear you at all. I listened again last night again and could not hear you on 3.685.

I worked a few friends on 3.697 but even inter 'G' was bad, in the end we ended up chatting with a friend on 80m who lives in the same town, hi hi.

Hopefully as the evenings open out the conditions will improve, but as you say that wont help with the chosen frequency.

Please let us all know what the new frequency is going to be so that we can listen out for your calls.

Keep up the good work, Keith

# 1305. Omni VII for Sale

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-01-19 14:06:10 UTC
From: <w4oco@...>
Topic: 1305  Message: 1305

I have decided to sell my Omni VII and accessories. I wanted to offer it here before listing elsewhere. The station is pristine and operates as it should with no issues. The speaker has a couple of tiny marks or scuffs , harly noticeable. It was purchased in 2009 from TenTec. I have the factory box for the rig. The asking price is $2100 plus actual shipping cost. Will take PayPal add 3%. Located in Virginia Beach if you want to check the station out.

Omni VII with Tuner
300 HZ Collins CW Filter
307B Speaker
302R Tuning Pod
709A Mic
USB to Serial Cable
310 Cooling Fan

I also have a SignaLink USB withpPlug and play module, SLCPAD8PD accesssory cable. I have the box, manual and accessories. Should work
with TenTec or Yaesu Radios. About 6 months old. 85.00 plus shipping

LogiKit CMOS4 Memory Keyer 85.00 plus shipping

Thanks for looking!
Mike
W4OCO

Contact me if interested mikehyman@cox.net or 757-831-8502

Hi John,

I noticed that the list for Jan 5 is correct with 113 points.
The list for Jan 12 shows 118 points. I checked into all 4 nets so it should be 117 points.

Thanks. Tony VE3DWI.

The Delaware Valley Radio Assoc. will be on the air for Winter FD 2014.
Hope to hear you on 28440.0 14325.0 7261.0 or 3958.
Eagles like snow
.
The 2014 Winter Field Day will be held from 1700 UTC (12:00 noon EST) Saturday January 25, 2014 through 1700 UTC (12:00 noon EST) Sunday January 26, 2014.
The contest runs for 24 hours during the last full weekend in January each year from 1700 UTC (12:00 noon EST) Saturday to 1700 UTC (12:00 noon EST) Sunday. For 2014, the dates are January 25 and 26th. Station set up may begin no earlier than 1300 UTC (8:00 AM EST) on January 25, 2014.
n2kpc@arrl.net
Feel free to bring a future Ham or stop in if you are in the area of Trenton New Jersey, USA

Hope to see you there.
73,
Lloyd N2KPC

# 1324. WINTER FD 2014 DE N2KPC

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-01-25 02:47:40 UTC
From: <n2kpc@...>
Topic: 1324  Message: 1324

Society for the Preservation of Amateur Radio The SPAR Winter Field Day Purpose: To encourage emergency operating preparedness in the winter.
When: The contest runs for 24 hours during the last full weekend in January each year from 1700 UTC (12:00 noon EST) Saturday to 1700 UTC (12:00 noon EST) Sunday. For 2014, the dates are January 25 and 26, 2014. Station set up may begin no earlier than 1300 UTC (8:00 AM EST) on January 25, 2014.
Bands: All bands, except 12, 17, 30 and 60 meters.
Modes: Any mode.
Categories:
a) Number of operators: 1, 2, Multi b) Site: Indoor, Outdoor, Home
For example, 2 operators at a remote campground would be 2O, 1 person at home would be 1H, 5 club members operating from a community center would be MI.
Exchange: Callsign, True RS/T (not all 599), Category, local outside temperature (with F or C). For example 1 person from a campground where the temperature is 28 F might send "KX5XYZ 449 1O 28F" or "KX5XYZ 449 1O -2C"
QSO Points: 1 point per QSO, regardless of band and mode. The object is to be able to communicate and in an emergency it doesn't matter what band and mode is used. Busted exchanges will be penalized by 1 additional point for each missed exchange or callsign. Duplicate contacts (same station, band and mode) will not be counted, but will not be penalized.
Multiplier: Count 1 multiplier for each mode operated per band. For example, operating CW and Phone on 80, 40, 15 and 10 meters, CW and PSK31 on 20m, FM on 2meters and satellite on 1.2 GHz would be a total multiplier of 12.
Bonus: Count 1000 points if commercial power is not used, 1000 points if outdoors and 1000 points if not at home. For example, operating outdoors in your backyard without commercial power would be 1000 + 1000 = 2000 points (outdoors, no commercial power), while operating from a campground tent using commercial power would be 1000 + 1000 = 2000 points (outdoors and not home). Note: There must have been at least 1 valid QSO in order to count bonus points. This is to ensure that someone claiming bonus points without actually making any contacts cannot win a category!
Final Score: QSO Points x Multiplier + Bonus Points.
Logs: Logs should be submitted to "winterfd@spar-hams.org" before 0000 UTC March 1st to be considered. All logs must be in Cabrillo format and should contain the following information:
Frequency (kHz) Mode (CW = CW, AM SSB FM = PH, Digital = DI, SSTV = TV, Satelite = SA) Date and time (UTC) Callsign, RS(T) and Exchange sent Callsign, RS(T) and Exchange received The Cabrillo QSO template is as follows. Please enter BONUS points in the Cabrillo Soapbox comments as shown.
SOAPBOX: BONUS 2000

```
--------info sent------- -------info rcvd--------
QSO: freq mo date time call rst exch call rst exch
QSO: ***** ** yyyy-mm-dd nnnn ************* nnn ****** ************* nnn ******
QSO: 3799 PH 1999-03-06 0711 W5ALT 59 1H35F WB5XAC 59 MO13C
```

Results will be posted on the SPAR website. Pictures, description of operations and logistics are encouraged and welcome.
Definitions:
Location - the place where an amateur station is setup for the contest.
Home - operating from the place where an amateur station is normally established. If the station used in the contest is setup before 8AM local time, it should be considered a home operation.
Indoor - operating from inside a building at a temporary location where amateur radio is not normally available, including community centers, etc. If it has a both a permanent roof and walls, it's indoors.
Outdoor - operating from remote locations with no permanent building, including campgrounds, tents, RV's, etc. An open-air pavillion with no walls would be considered Outdoor.
Band - the normal amateur band allocations recognized by the ITU, i.e. 160, 80, 40, 20, 15, 10, 6, and 2 meters, plus the UHF bands. To be counted as a band, at least 1 valid QSO must have taken place on the band during the contest. 75 meters counts as part of 80 meters.
Mode - CW, Phone (including SSB, AM, FM), Digital (including PSK, RTTY, and other soundcard modes), SSTV, satellite.
Operator - Any person that operates the radio, keyboard, microphone or CW key, including logging assistance. This does not include non-operators, such as someone who brings food, but does not participate in operating.
Miscellaneous:
- All rules governing amateur radio must be observed throughout. - The decisions of the SPAR BoD is final.

HOPE TO WORK YOU ON 28440-7261-14325-3958
AND ON THE TENTEC NETS SUNDAY IN THE PM
73, Lloyd N2KPC

# 1325. Delaware Valley Radio Association recieved 100th

The new President N2HX Bob drove thru the snow storm today to bring the 100 th
Platinum Certificate for the Club Station W2ZQ to me with a big smile on his face.
He said " it a very nice Certificate, very well done.".
I saw Bob take it out of the mailing package again to look at it before he left Winter
Field Day to return to his home.
Well done Jim Wharton, Thank You from The W2ZQ Club.
That one is going on the wall for all to see.
73,
Lloyd N2KPC

# 1326. TENTEC NETS 1-26-2014 Sunday, Don't Forget.

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-01-26 04:02:56 UTC
From: <n2kpc@...>
Topic: 1326  Message: 1326

Looking forward to hear each of you as always.
You can listen to the Ten-Tec SSB Net via a live link thru QRZ by looking up KC2QMA, John in Nashville, TN and you can hear what your station
sounds like in TN. Just click on the video screen on his QRZ page. Thank You John, KC2QMA for your time and hard work for the Net.
The TEN-TEC Net Schedule :
Sunday 1:00 PM Eastern Time: 10 Meter SSB net on 28.440. Lloyd N2KPC, Net Control.
Sunday 2:00 PM Eastern Time: 40 Meter SSB net on 7.261. John K3UR, Net Control.
Sunday 3:00 PM Eastern Time: 20 Meter SSB net on 14.325. John K3UR, Net Control.
Monday 7:30 PM Eastern Time: 40 Meter CW net on 7.063. Ron WB1HGA, Net Control.
Wednesday 2100 local Brussels Belgium Time (1900) UTC): European SSB net on 3.650. Bob ON4LDL, Net Control.
See the Ten-Tec Web Site at www.tentec.com for more information.
Also check out the TEN-TEC RADIO NET GROUP on Yahoo and find out about the TEN-TEC CERTIFICATE PROGRAM.
The TEN-TEC SSB NET is a great source of information with Hams on the air to help you with your Home Station, Mobile, RV, QRP.
I want to say Thank You to Everybody on the TEN-TEC SSB Net who checks in and helps the other Hams by relaying and waiting when
John, K3UR and I might pause the list and pick up a weak station. God Bless and keep you all of you safe and help us find the good that
comes fron this great hobbie to share with each other at all times world wide.
It is nice to have Hams that know and care about each other and understand that we all are not hearing the same station the same way.
C U There,
73,
Lloyd N2KPC

# 1327. 1500 hundred checkins???? Maybe. only 7 new ones needed

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-01-26 04:33:59 UTC
From: <n2kpc@...>
Topic: 1327  Message: 1327

FLASH We have 1493 check ins as of last week "1-19-2014".
We are about to reach 1500 check ins, That's a real milestone for any net.
Get on your repeaters, shout out, knock on a door, call a friend any way you can.
Make Waffles, BBQ, turn the heat up, yeah that's it, just tell them you turned the heat up that should bring them in. Throw a extra log on the fire.
Let's try to break 1500 TENTEC NET Check ins for K3UR John who has worked so hard for each and everyone of us. We only need 7 New Hams to check in to reach
1500 Total Check ins.
73,
Lloyd N2KPC

# 1329. Hello from new member

Date: 2014-01-27 00:16:04 UTC
From: Ian Westerland
Topic: 1329  Message: 1329

Hello. I just joined the group after hearing the net on 20 metres just after 8am Eastern australian Summer time. Signals weren't all that strong here, but long path was opening up to the U S and I heard John announcing the details of the group. So, here I am.

I am a licenced Ham, and have been so for 8 years in February.

I use and enjoy operating my Kenwood TS-590s with a variety of aerials. However, I lacked a true QRP rig and am about to buy a TenTec Argonaut VI. The intention is to work some QRP DX both from home here in Corio, Geelong, and from some portable locations when I build the aerials.

There you have it and I look forward to contributing to the group.

73 to all and thank you for having me as a member of the group.

Ian Westerland

Hello Ian,

Well, you won't be disappointed using. I've had my Argonaut VI for a few weeks and just took delivery on a 418 amplifier to go along with the radio. I use the Argonaut VI (model 539) barefoot 95% of the time. I also have an Argonaut V too. Today, I checked into both the 40 Meter and 20 Meter nets using my Argonaut VI barefoot at 10 watts.

The receiver on the 539 runs circles around the Argonaut V, but each transceiver is in a class, each it's own! You won't be disappointed! I hope to hear you on the Ten-Tec net often. Best of luck with you new purchase should you get the 539.

73,
Bill
